

## CISM Dumps

### Certified Information Security Manager

<https://www.certleader.com/CISM-dumps.html>

**NEW QUESTION 1**

Which of the following is responsible for legal and regulatory liability?

- A. Chief security officer (CSO)
- B. Chief legal counsel (CLC)
- C. Board and senior management
- D. Information security steering group

**Answer: C**

**Explanation:**

The board of directors and senior management are ultimately responsible for all that happens in the organization. The others are not individually liable for failures of security in the organization.

**NEW QUESTION 2**

When an organization is implementing an information security governance program, its board of directors should be responsible for:

- A. drafting information security policie
- B. reviewing training and awareness program
- C. setting the strategic direction of the progra
- D. auditing for complianc

**Answer: C**

**Explanation:**

A board of directors should establish the strategic direction of the program to ensure that it is in sync with the company's vision and business goals. The board must incorporate the governance program into the overall corporate business strategy. Drafting information security policies is best fulfilled by someone such as a security manager with the expertise to bring balance, scope and focus to the policies. Reviewing training and awareness programs may best be handled by security management and training staff to ensure that the training is on point and follows best practices. Auditing for compliance is best left to the internal and external auditors to provide an objective review of the program and how it meets regulatory and statutory compliance.

**NEW QUESTION 3**

Which of the following would be MOST effective in successfully implementing restrictive password policies?

- A. Regular password audits
- B. Single sign-on system
- C. Security awareness program
- D. Penalties for noncompliance

**Answer: C**

**Explanation:**

To be successful in implementing restrictive password policies, it is necessary to obtain the buy-in of the end users. The best way to accomplish this is through a security awareness program. Regular password audits and penalties for noncompliance would not be as effective on their own; people would go around them unless forced by the system. Single sign-on is a technology solution that would enforce password complexity but would not promote user compliance. For the effort to be more effective, user buy-in is important.

**NEW QUESTION 4**

The FIRST step in establishing a security governance program is to:

- A. conduct a risk assessmen
- B. conduct a workshop for all end user
- C. prepare a security budge
- D. obtain high-level sponsorshi

**Answer: D**

**Explanation:**

The establishment of a security governance program is possible only with the support and sponsorship of top management since security governance projects are enterprise wide and integrated into business processes. Conducting a risk assessment, conducting a workshop for all end users and preparing a security budget all follow once high-level sponsorship is obtained.

**NEW QUESTION 5**

It is MOST important that information security architecture be aligned with which of the following?

- A. Industry best practices
- B. Information technology plans
- C. Information security best practices
- D. Business objectives and goals

**Answer: D**

**Explanation:**

Information security architecture should always be properly aligned with business goals and objectives. Alignment with IT plans or industry and security best practices is secondary by comparison.

**NEW QUESTION 6**

Which of the following is MOST likely to be discretionary?

- A. Policies
- B. Procedures
- C. Guidelines
- D. Standards

**Answer: C**

**Explanation:**

Policies define security goals and expectations for an organization. These are defined in more specific terms within standards and procedures. Standards establish what is to be done while procedures describe how it is to be done. Guidelines provide recommendations that business management must consider in developing practices within their areas of control; as such, they are discretionary.

**NEW QUESTION 7**

Successful implementation of information security governance will FIRST require:

- A. security awareness trainin
- B. updated security policie
- C. a computer incident management tea
- D. a security architectur

**Answer: B**

**Explanation:**

Updated security policies are required to align management objectives with security procedures; management objectives translate into policy, policy translates into procedures. Security procedures will necessitate specialized teams such as the computer incident response and management group as well as specialized tools such as the security mechanisms that comprise the security architecture. Security awareness will promote the policies, procedures and appropriate use of the security mechanisms.

**NEW QUESTION 8**

The MOST effective approach to address issues that arise between IT management, business units and security management when implementing a new security strategy is for the information security manager to:

- A. escalate issues to an external third party for resolutio
- B. ensure that senior management provides authority for security to address the issue
- C. insist that managers or units not in agreement with the security solution accept the ris
- D. refer the issues to senior management along with any security recommendation

**Answer: D**

**Explanation:**

Senior management is in the best position to arbitrate since they will look at the overall needs of the business in reaching a decision. The authority may be delegated to others by senior management after their review of the issues and security recommendations. Units should not be asked to accept the risk without first receiving input from senior management.

**NEW QUESTION 9**

When a security standard conflicts with a business objective, the situation should be resolved by:

- A. changing the security standar
- B. changing the business objectiv
- C. performing a risk analysi
- D. authorizing a risk acceptanc

**Answer: C**

**Explanation:**

Conflicts of this type should be based on a risk analysis of the costs and benefits of allowing or disallowing an exception to the standard. It is highly improbable that a business objective could be changed to accommodate a security standard, while risk acceptance\* is a process that derives from the risk analysis.

**NEW QUESTION 10**

The PRIMARY objective of a security steering group is to:

- A. ensure information security covers all business function
- B. ensure information security aligns with business goal
- C. raise information security awareness across the organizatio
- D. implement all decisions on security management across the organizatio

**Answer:** B

**Explanation:**

The security steering group comprises senior management of key business functions and has the primary objective to align the security strategy with the business direction. Option A is incorrect because all business areas may not be required to be covered by information security; but, if they do, the main purpose of the steering committee would be alignment more so than coverage. While raising awareness is important, this goal would not be carried out by the committee itself. The steering committee may delegate part of the decision making to the information security manager; however, if it retains this authority, it is not the primary' goal.

#### **NEW QUESTION 10**

Information security governance is PRIMARILY driven by:

- A. technology constraint
- B. regulatory requirement
- C. litigation potentia
- D. business strateg

**Answer:** D

**Explanation:**

Governance is directly tied to the strategy and direction of the business. Technology constraints, regulatory requirements and litigation potential are all important factors, but they are necessarily in line with the business strategy.

#### **NEW QUESTION 14**

Who should be responsible for enforcing access rights to application data?

- A. Data owners
- B. Business process owners
- C. The security steering committee
- D. Security administrators

**Answer:** D

**Explanation:**

As custodians, security administrators are responsible for enforcing access rights to data. Data owners are responsible for approving these access rights. Business process owners are sometimes the data owners as well, and would not be responsible for enforcement. The security steering committee would not be responsible for enforcement.

#### **NEW QUESTION 17**

Which of the following is the MOST important factor when designing information security architecture?

- A. Technical platform interfaces
- B. Scalability of the network
- C. Development methodologies
- D. Stakeholder requirements

**Answer:** D

**Explanation:**

The most important factor for information security is that it advances the interests of the business, as defined by stakeholder requirements. Interoperability and scalability, as well as development methodologies, are all important but are without merit if a technologically-elegant solution is achieved that does not meet the needs of the business.

#### **NEW QUESTION 18**

Which of the following factors is a PRIMARY driver for information security governance that does not require any further justification?

- A. Alignment with industry best practices
- B. Business continuity investment
- C. Business benefits
- D. Regulatory compliance

**Answer:** D

**Explanation:**

Regulatory compliance can be a standalone driver for an information security governance measure. No further analysis nor justification is required since the entity has no choice in the regulatory requirements. Buy-in from business managers must be obtained by the information security manager when an information security governance measure is sought based on its alignment with industry best practices. Business continuity investment needs to be justified by business impact analysis. When an information security governance measure is sought based on qualitative business benefits, further analysis is required to determine whether the benefits outweigh the cost of the information security governance measure in question.

#### **NEW QUESTION 20**

The MOST complete business case for security solutions is one that.

- A. includes appropriate justification
- B. explains the current risk profile
- C. details regulatory requirement
- D. identifies incidents and losses

**Answer:** A

**Explanation:**

Management is primarily interested in security solutions that can address risks in the most cost-effective way. To address the needs of an organization, a business case should address appropriate security solutions in line with the organizational strategy.

#### **NEW QUESTION 25**

What would a security manager PRIMARILY utilize when proposing the implementation of a security solution?

- A. Risk assessment report
- B. Technical evaluation report
- C. Business case
- D. Budgetary requirements

**Answer:** C

**Explanation:**

The information security manager needs to prioritize the controls based on risk management and the requirements of the organization. The information security manager must look at the costs of the various controls and compare them against the benefit the organization will receive from the security solution. The information security manager needs to have knowledge of the development of business cases to illustrate the costs and benefits of the various controls. All other choices are supplemental.

#### **NEW QUESTION 28**

Which of the following is the MOST important prerequisite for establishing information security management within an organization?

- A. Senior management commitment
- B. Information security framework
- C. Information security organizational structure
- D. Information security policy

**Answer:** A

**Explanation:**

Senior management commitment is necessary in order for each of the other elements to succeed. Without senior management commitment, the other elements will likely be ignored within the organization.

#### **NEW QUESTION 32**

Which of the following is the MOST important information to include in an information security standard?

- A. Creation date
- B. Author name
- C. Initial draft approval date
- D. Last review date

**Answer:** D

**Explanation:**

The last review date confirms the currency of the standard, affirming that management has reviewed the standard to assure that nothing in the environment has changed that would necessitate an update to the standard. The name of the author as well as the creation and draft dates are not that important.

#### **NEW QUESTION 37**

From an information security perspective, information that no longer supports the main purpose of the business should be:

- A. analyzed under the retention policy
- B. protected under the information classification policy
- C. analyzed under the backup policy
- D. protected under the business impact analysis (BIA).

**Answer:** A

**Explanation:**

Option A is the type of analysis that will determine whether the organization is required to maintain the data for business, legal or regulatory reasons. Keeping data that are no longer required unnecessarily consumes resources, and, in the case of sensitive personal information, can increase the risk of data compromise. Options B, C and D are attributes that should be considered in the destruction and retention policy. A BIA could help determine that this information does not support the main objective of the business, but does not indicate the action to take.

#### **NEW QUESTION 42**

Which of the following is characteristic of centralized information security management?

- A. More expensive to administer
- B. Better adherence to policies
- C. More aligned with business unit needs
- D. Faster turnaround of requests

**Answer: B**

**Explanation:**

Centralization of information security management results in greater uniformity and better adherence to security policies. It is generally less expensive to administer due to the economics of scale. However, turnaround can be slower due to the lack of alignment with business units.

#### **NEW QUESTION 47**

Senior management commitment and support for information security can BEST be obtained through presentations that:

- A. use illustrative examples of successful attack
- B. explain the technical risks to the organizatio
- C. evaluate the organization against best security practice
- D. tie security risks to key business objective

**Answer: D**

**Explanation:**

Senior management seeks to understand the business justification for investing in security. This can best be accomplished by tying security to key business objectives. Senior management will not be as interested in technical risks or examples of successful attacks if they are not tied to the impact on business environment and objectives. Industry best practices are important to senior management but, again, senior management will give them the right level of importance when they are presented in terms of key business objectives.

#### **NEW QUESTION 51**

Effective IT governance is BEST ensured by:

- A. utilizing a bottom-up approac
- B. management by the IT departmen
- C. referring the matter to the organization's legal departmen
- D. utilizing a top-down approac

**Answer: D**

**Explanation:**

Effective IT governance needs to be a top-down initiative, with the board and executive management setting clear policies, goals and objectives and providing for ongoing monitoring of the same. Focus on the regulatory issues and management priorities may not be reflected effectively by a bottom-up approach. IT governance affects the entire organization and is not a matter concerning only the management of IT. The legal department is part of the overall governance process, but cannot take full responsibility.

#### **NEW QUESTION 52**

Reviewing which of the following would BEST ensure that security controls are effective?

- A. Risk assessment policies
- B. Return on security investment
- C. Security metrics
- D. User access rights

**Answer: C**

**Explanation:**

Reviewing security metrics provides senior management a snapshot view and trends of an organization's security posture. Choice A is incorrect because reviewing risk assessment policies would not ensure that the controls are actually working. Choice B is incorrect because reviewing returns on security investments provides business justifications in implementing controls, but does not measure effectiveness of the control itself. Choice D is incorrect because reviewing user access rights is a joint responsibility of the data custodian and the data owner, and does not measure control effectiveness.

#### **NEW QUESTION 57**

The MOST basic requirement for an information security governance program is to:

- A. be aligned with the corporate business strateg
- B. be based on a sound risk management approac
- C. provide adequate regulatory complianc
- D. provide best practices for security- initiative

**Answer: A**

**Explanation:**

To receive senior management support, an information security program should be aligned with the corporate business strategy. Risk management is a

requirement of an information security program which should take into consideration the business strategy. Security governance is much broader than just regulatory compliance. Best practice is an operational concern and does not have a direct impact on a governance program.

**NEW QUESTION 60**

The organization has decided to outsource the majority of the IT department with a vendor that is hosting servers in a foreign country. Of the following, which is the MOST critical security consideration?

- A. Laws and regulations of the country of origin may not be enforceable in the foreign countr
- B. A security breach notification might get delayed due to the time differenc
- C. Additional network intrusion detection sensors should be installed, resulting in an additional cos
- D. The company could lose physical control over the server and be unable to monitor the physical security posture of the server

**Answer:** A

**Explanation:**

A company is held to the local laws and regulations of the country in which the company resides, even if the company decides to place servers with a vendor that hosts the servers in a foreign country. A potential violation of local laws applicable to the company might not be recognized or rectified (i.e., prosecuted) due to the lack of knowledge of the local laws that are applicable and the inability to enforce the laws. Option B is not a problem. Time difference does not play a role in a 24/7 environment. Pagers, cellular phones, telephones, etc. are usually available to communicate notifications. Option C is a manageable problem that requires additional funding, but can be addressed. Option D is a problem that can be addressed. Most hosting providers have standardized the level of physical security that is in place. Regular physical audits or a SAS 70 report can address such concerns.

**NEW QUESTION 62**

Obtaining senior management support for establishing a warm site can BEST be accomplished by:

- A. establishing a periodic risk assessmen
- B. promoting regulatory requirement
- C. developing a business cas
- D. developing effective metric

**Answer:** C

**Explanation:**

Business case development, including a cost-benefit analysis, will be most persuasive to management. A risk assessment may be included in the business ease, but by itself will not be as effective in gaining management support. Informing management of regulatory requirements may help gain support for initiatives, but given that more than half of all organizations are not in compliance with regulations, it is unlikely to be sufficient in many cases. Good metrics which provide assurance that initiatives are meeting organizational goals will also be useful, but are insufficient in gaining management support.

**NEW QUESTION 67**

A security manager is preparing a report to obtain the commitment of executive management to a security program. Inclusion of which of the following would be of MOST value?

- A. Examples of genuine incidents at similar organizations
- B. Statement of generally accepted best practices
- C. Associating realistic threats to corporate objectives
- D. Analysis of current technological exposures

**Answer:** C

**Explanation:**

Linking realistic threats to key business objectives will direct executive attention to them. All other options are supportive but not of as great a value as choice C when trying to obtain the funds for a new program.

**NEW QUESTION 71**

When identifying legal and regulatory issues affecting information security, which of the following would represent the BEST approach to developing information security policies?

- A. Create separate policies to address each regulation
- B. Develop policies that meet all mandated requirements
- C. Incorporate policy statements provided by regulators
- D. Develop a compliance risk assessment

**Answer:** B

**Explanation:**

It will be much more efficient to craft all relevant requirements into policies than to create separate versions. Using statements provided by regulators will not capture all of the requirements mandated by different regulators. A compliance risk assessment is an important tool to verify that procedures ensure compliance once the policies have been established.

**NEW QUESTION 73**

Who is ultimately responsible for the organization's information?

- A. Data custodian
- B. Chief information security officer (CISO)

- C. Board of directors
- D. Chief information officer (CIO)

**Answer:** C

**Explanation:**

The board of directors is ultimately responsible for the organization's information and is tasked with responding to issues that affect its protection. The data custodian is responsible for the maintenance and protection of data. This role is usually filled by the IT department. The chief information security officer (CISO) is responsible for security and carrying out senior management's directives. The chief information officer (CIO) is responsible for information technology within the organization and is not ultimately responsible for the organization's information.

#### NEW QUESTION 77

A good privacy statement should include:

- A. notification of liability on accuracy of informatio
- B. notification that information will be encrypte
- C. what the company will do with information it collect
- D. a description of the information classification proces

**Answer:** C

**Explanation:**

Most privacy laws and regulations require disclosure on how information will be used. Choice A is incorrect because that information should be located in the web site's disclaimer. Choice B is incorrect because, although encryption may be applied, this is not generally disclosed. Choice D is incorrect because information classification would be contained in a separate policy.

#### NEW QUESTION 82

An information security strategy document that includes specific links to an organization's business activities is PRIMARILY an indicator of:

- A. performance measuremen
- B. integratio
- C. alignmen
- D. value deliver

**Answer:** C

**Explanation:**

Strategic alignment of security with business objectives is a key indicator of performance measurement. In guiding a security program, a meaningful performance measurement will also rely on an understanding of business objectives, which will be an outcome of alignment. Business linkages do not by themselves indicate integration or value delivery. While alignment is an important precondition, it is not as important an indicator.

#### NEW QUESTION 87

Retention of business records should PRIMARILY be based on:

- A. business strategy and directio
- B. regulatory and legal requirement
- C. storage capacity and longevit
- D. business ease and value analysi

**Answer:** B

**Explanation:**

Retention of business records is generally driven by legal and regulatory requirements. Business strategy and direction would not normally apply nor would they override legal and regulatory requirements. Storage capacity and longevity are important but secondary issues. Business case and value analysis would be secondary to complying with legal and regulatory requirements.

#### NEW QUESTION 89

To achieve effective strategic alignment of security initiatives, it is important that:

- A. Steering committee leadership be selected by rotatio
- B. Inputs be obtained and consensus achieved between the major organizational unit
- C. The business strategy be updated periodical
- D. Procedures and standards be approved by all departmental head

**Answer:** B

**Explanation:**

It is important to achieve consensus on risks and controls, and obtain inputs from various organizational entities since security needs to be aligned to the needs of the organization. Rotation of steering committee leadership does not help in achieving strategic alignment. Updating business strategy does not lead to strategic alignment of security initiatives. Procedures and standards need not be approved by all departmental heads

#### NEW QUESTION 92

An organization's board of directors has learned of recent legislation requiring organizations within the industry to enact specific safeguards to protect confidential customer information. What actions should the board take next?

- A. Direct information security on what they need to do
- B. Research solutions to determine the proper solutions
- C. Require management to report on compliance
- D. Nothing; information security does not report to the board

**Answer:** C

**Explanation:**

Information security governance is the responsibility of the board of directors and executive management. In this instance, the appropriate action is to ensure that a plan is in place for implementation of needed safeguards and to require updates on that implementation.

#### **NEW QUESTION 95**

When an organization is setting up a relationship with a third-party IT service provider, which of the following is one of the MOST important topics to include in the contract from a security standpoint?

- A. Compliance with international security standard
- B. Use of a two-factor authentication system
- C. Existence of an alternate hot site in case of business disruption
- D. Compliance with the organization's information security requirement

**Answer:** D

**Explanation:**

From a security standpoint, compliance with the organization's information security requirements is one of the most important topics that should be included in the contract with third-party service provider. The scope of implemented controls in any ISO 27001-compliant organization depends on the security requirements established by each organization. Requiring compliance only with this security standard does not guarantee that a service provider complies with the organization's security requirements. The requirement to use a specific kind of control methodology is not usually stated in the contract with third-party service providers.

#### **NEW QUESTION 100**

Which of the following are seldom changed in response to technological changes?

- A. Standards
- B. Procedures
- C. Policies
- D. Guidelines

**Answer:** C

**Explanation:**

Policies are high-level statements of objectives. Because of their high-level nature and statement of broad operating principles, they are less subject to periodic change. Security standards and procedures as well as guidelines must be revised and updated based on the impact of technology changes.

#### **NEW QUESTION 101**

When implementing effective security governance within the requirements of the company's security strategy, which of the following is the MOST important factor to consider?

- A. Preserving the confidentiality of sensitive data
- B. Establishing international security standards for data sharing
- C. Adhering to corporate privacy standards
- D. Establishing system manager responsibility for information security

**Answer:** A

**Explanation:**

The goal of information security is to protect the organization's information assets. International security standards are situational, depending upon the company and its business. Adhering to corporate privacy standards is important, but those standards must be appropriate and adequate and are not the most important factor to consider. All employees are responsible for information security, but it is not the most important factor to consider.

#### **NEW QUESTION 106**

On a company's e-commerce web site, a good legal statement regarding data privacy should include:

- A. a statement regarding what the company will do with the information it collect
- B. a disclaimer regarding the accuracy of information on its web sit
- C. technical information regarding how information is protecte
- D. a statement regarding where the information is being hoste

**Answer:** A

**Explanation:**

Most privacy laws and regulations require disclosure on how information will be used. A disclaimer is not necessary since it does not refer to data privacy.

Technical details regarding how information is protected are not mandatory to publish on the web site and in fact would not be desirable. It is not mandatory to say where information is being hosted.

**NEW QUESTION 107**

The MOST important factor in planning for the long-term retention of electronically stored business records is to take into account potential changes in:

- A. storage capacity and shelf lif
- B. regulatory and legal requirement
- C. business strategy and directio
- D. application systems and medi

**Answer: D**

**Explanation:**

Long-term retention of business records may be severely impacted by changes in application systems and media. For example, data stored in nonstandard formats that can only be read and interpreted by previously decommissioned applications may be difficult, if not impossible, to recover. Business strategy and direction do not generally apply, nor do legal and regulatory requirements. Storage capacity and shelf life are important but secondary issues.

**NEW QUESTION 111**

Which of the following is the BEST justification to convince management to invest in an information security program?

- A. Cost reduction
- B. Compliance with company policies
- C. Protection of business assets
- D. Increased business value

**Answer: D**

**Explanation:**

Investing in an information security program should increase business value and confidence. Cost reduction by itself is rarely the motivator for implementing an information security program. Compliance is secondary to business value. Increasing business value may include protection of business assets.

**NEW QUESTION 114**

What is the MAIN risk when there is no user management representation on the Information Security Steering Committee?

- A. Functional requirements are not adequately considere
- B. User training programs may be inadequat
- C. Budgets allocated to business units are not appropriat
- D. Information security plans are not aligned with business requirements

**Answer: D**

**Explanation:**

The steering committee controls the execution of the information security strategy, according to the needs of the organization, and decides on the project prioritization and the execution plan. User management is an important group that should be represented to ensure that the information security plans are aligned with the business needs. Functional requirements and user training programs are considered to be part of the projects but are not the main risks. The steering committee does not approve budgets for business units.

**NEW QUESTION 116**

Which of the following should be the FIRST step in developing an information security plan?

- A. Perform a technical vulnerabilities assessment
- B. Analyze the current business strategy
- C. Perform a business impact analysis
- D. Assess the current levels of security awareness

**Answer: B**

**Explanation:**

Prior to assessing technical vulnerabilities or levels of security awareness, an information security manager needs to gain an understanding of the current business strategy and direction. A business impact analysis should be performed prior to developing a business continuity plan, but this would not be an appropriate first step in developing an information security strategy because it focuses on availability.

**NEW QUESTION 117**

When designing an information security quarterly report to management, the MOST important element to be considered should be the:

- A. information security metric
- B. knowledge required to analyze each issu
- C. linkage to business area objective
- D. baseline against which metrics are evaluate

**Answer: C**

**Explanation:**

The link to business objectives is the most important element that would be considered by management. Information security metrics should be put in the context of impact to management objectives. Although important, the security knowledge required would not be the first element to be considered. Baselining against the information security metrics will be considered later in the process.

**NEW QUESTION 121**

Logging is an example of which type of defense against systems compromise?

- A. Containment
- B. Detection
- C. Reaction
- D. Recovery

**Answer: B**

**Explanation:**

Detection defenses include logging as well as monitoring, measuring, auditing, detecting viruses and intrusion. Examples of containment defenses are awareness, training and physical security defenses. Examples of reaction defenses are incident response, policy and procedure change, and control enhancement. Examples of recovery defenses are backups and restorations, failover and remote sites, and business continuity plans and disaster recovery plans.

**NEW QUESTION 123**

An information security manager at a global organization has to ensure that the local information security program will initially ensure compliance with the:

- A. corporate data privacy policy
- B. data privacy policy where data are collected
- C. data privacy policy of the headquarters' country
- D. data privacy directive applicable globally

**Answer: B**

**Explanation:**

As a subsidiary, the local entity will have to comply with the local law for data collected in the country. Senior management will be accountable for this legal compliance. The policy, being internal, cannot supersede the local law. Additionally, with local regulations differing from the country in which the organization is headquartered, it is improbable that a group-wide policy will address all the local legal requirements. In case of data collected locally (and potentially transferred to a country with a different data privacy regulation), the local law applies, not the law applicable to the head office. The data privacy laws are country-specific.

**NEW QUESTION 124**

When an organization hires a new information security manager, which of the following goals should this individual pursue FIRST?

- A. Develop a security architecture
- B. Establish good communication with steering committee members
- C. Assemble an experienced staff
- D. Benchmark peer organizations

**Answer: B**

**Explanation:**

New information security managers should seek to build rapport and establish lines of communication with senior management to enlist their support. Benchmarking peer organizations is beneficial to better understand industry best practices, but it is secondary to obtaining senior management support. Similarly, developing a security architecture and assembling an experienced staff are objectives that can be obtained later.

**NEW QUESTION 129**

Which of the following represents the MAJOR focus of privacy regulations?

- A. Unrestricted data mining
- B. Identity theft
- C. Human rights protection
- D. Identifiable personal data

**Answer: D**

**Explanation:**

Protection of identifiable personal data is the major focus of recent privacy regulations such as the Health Insurance Portability and Accountability Act (HIPAA). Data mining is an accepted tool for ad hoc reporting; it could pose a threat to privacy only if it violates regulator provisions. Identity theft is a potential consequence of privacy violations but not the main focus of many regulations. Human rights addresses privacy issues but is not the main focus of regulations.

**NEW QUESTION 134**

Which of the following situations would MOST inhibit the effective implementation of security governance:

- A. The complexity of technology
- B. Budgetary constraints
- C. Conflicting business priorities

D. High-level sponsorship

**Answer:** D

**Explanation:**

The need for senior management involvement and support is a key success factor for the implementation of appropriate security governance. Complexity of technology, budgetary constraints and conflicting business priorities are realities that should be factored into the governance model of the organization, and should not be regarded as inhibitors.

#### **NEW QUESTION 135**

The data access requirements for an application should be determined by the:

- A. legal departmen
- B. compliance office
- C. information security manage
- D. business owne

**Answer:** D

**Explanation:**

Business owners are ultimately responsible for their applications. The legal department, compliance officer and information security manager all can advise, but do not have final responsibility.

#### **NEW QUESTION 139**

The MOST appropriate role for senior management in supporting information security is the:

- A. evaluation of vendors offering security product
- B. assessment of risks to the organizatio
- C. approval of policy statements and fundin
- D. monitoring adherence to regulatory requirement

**Answer:** C

**Explanation:**

Since the members of senior management are ultimately responsible for information security, they are the ultimate decision makers in terms of governance and direction. They are responsible for approval of major policy statements and requests to fund the information security practice. Evaluation of vendors, assessment of risks and monitoring compliance with regulatory requirements are day-to-day responsibilities of the information security manager; in some organizations, business management is involved in these other activities, though their primary role is direction and governance.

#### **NEW QUESTION 140**

Which of the following requirements would have the lowest level of priority in information security?

- A. Technical
- B. Regulatory
- C. Privacy
- D. Business

**Answer:** A

**Explanation:**

Information security priorities may, at times, override technical specifications, which then must be rewritten to conform to minimum security standards. Regulatory and privacy requirements are government-mandated and, therefore, not subject to override. The needs of the business should always take precedence in deciding information security priorities.

#### **NEW QUESTION 143**

Which of the following would be MOST helpful to achieve alignment between information security and organization objectives?

- A. Key control monitoring
- B. A robust security awareness program
- C. A security program that enables business activities
- D. An effective security architecture

**Answer:** C

**Explanation:**

A security program enabling business activities would be most helpful to achieve alignment between information security and organization objectives. All of the other choices are part of the security program and would not individually and directly help as much as the security program.

#### **NEW QUESTION 144**

The MOST important component of a privacy policy is:

- A. notification

- B. warrantie
- C. liabilitie
- D. geographic coverag

**Answer:** A

**Explanation:**

Privacy policies must contain notifications and opt-out provisions: they are a high-level management statement of direction. They do not necessarily address warranties, liabilities or geographic coverage, which are more specific.

#### NEW QUESTION 149

Which of the following would be the MOST important goal of an information security governance program?

- A. Review of internal control mechanisms
- B. Effective involvement in business decision making
- C. Total elimination of risk factors
- D. Ensuring trust in data

**Answer:** D

**Explanation:**

The development of trust in the integrity of information among stakeholders should be the primary goal of information security governance. Review of internal control mechanisms relates more to auditing, while the total elimination of risk factors is not practical or possible. Proactive involvement in business decision making implies that security needs dictate business needs when, in fact, just the opposite is true. Involvement in decision making is important only to ensure business data integrity so that data can be trusted.

#### NEW QUESTION 154

A security manager meeting the requirements for the international flow of personal data will need to ensure:

- A. a data processing agreemen
- B. a data protection registratio
- C. the agreement of the data subject
- D. subject access procedure

**Answer:** C

**Explanation:**

Whenever personal data are transferred across national boundaries, the awareness and agreement of the data subjects are required. Choices A, B and D are supplementary data protection requirements that are not key for international data transfer.

#### NEW QUESTION 158

Who in an organization has the responsibility for classifying information?

- A. Data custodian
- B. Database administrator
- C. Information security officer
- D. Data owner

**Answer:** D

**Explanation:**

The data owner has full responsibility over data. The data custodian is responsible for securing the information. The database administrator carries out the technical administration. The information security officer oversees the overall classification management of the information.

#### NEW QUESTION 163

Senior management commitment and support for information security can BEST be enhanced through:

- A. a formal security policy sponsored by the chief executive officer (CEO).
- B. regular security awareness training for employee
- C. periodic review of alignment with business management goal
- D. senior management signoff on the information security strateg

**Answer:** C

**Explanation:**

Ensuring that security activities continue to be aligned and support business goals is critical to obtaining their support. Although having the chief executive officer (CEO) signoff on the security policy and senior management signoff on the security strategy makes for good visibility and demonstrates good tone at the top, it is a one-time discrete event that may be quickly forgotten by senior management. Security awareness training for employees will not have as much effect on senior management commitment.

#### NEW QUESTION 168

The BEST way to justify the implementation of a single sign-on (SSO) product is to use:

- A. return on investment (RO
- B. a vulnerability assessmen
- C. annual loss expectancy (ALE).
- D. a business cas

**Answer:** D

**Explanation:**

A business case shows both direct and indirect benefits, along with the investment required and the expected returns, thus making it useful to present to senior management. Return on investment (ROD would only provide the costs needed to preclude specific risks, and would not provide other indirect benefits such as process improvement and learning. A vulnerability assessment is more technical in nature and would only identify and assess the vulnerabilities. This would also not provide insights on indirect benefits. Annual loss expectancy (ALE) would not weigh the advantages of implementing single sign-on (SSO) in comparison to the cost of implementation.

#### **NEW QUESTION 170**

Which of the following individuals would be in the BEST position to sponsor the creation of an information security steering group?

- A. Information security manager
- B. Chief operating officer (COO)
- C. Internal auditor
- D. Legal counsel

**Answer:** B

**Explanation:**

The chief operating officer (COO) is highly-placed within an organization and has the most knowledge of business operations and objectives. The chief internal auditor and chief legal counsel are appropriate members of such a steering group. However, sponsoring the creation of the steering committee should be initiated by someone versed in the strategy and direction of the business. Since a security manager is looking to this group for direction, they are not in the best position to oversee formation of this group.

#### **NEW QUESTION 172**

Who should drive the risk analysis for an organization?

- A. Senior management
- B. Security manager
- C. Quality manager
- D. Legal department

**Answer:** B

**Explanation:**

Although senior management should support and sponsor a risk analysis, the know-how and the management of the project will be with the security department. Quality management and the legal department will contribute to the project.

#### **NEW QUESTION 173**

An information security manager must understand the relationship between information security and business operations in order to:

- A. support organizational objective
- B. determine likely areas of noncomplianc
- C. assess the possible impacts of compromis
- D. understand the threats to the busines

**Answer:** A

**Explanation:**

Security exists to provide a level of predictability for operations, support for the activities of the organization and to ensure preservation of the organization. Business operations must be the driver for security activities in order to set meaningful objectives, determine and manage the risks to those activities, and provide a basis to measure the effectiveness of and provide guidance to the security program. Regulatory compliance may or may not be an organizational requirement. If compliance is a requirement, some level of compliance must be supported but compliance is only one aspect. It is necessary to understand the business goals in order to assess potential impacts and evaluate threats. These are some of the ways in which security supports organizational objectives, but they are not the only ways.

#### **NEW QUESTION 178**

Which of the following BEST describes an information security manager's role in a multidisciplinary team that will address a new regulatory requirement regarding operational risk?

- A. Ensure that all IT risks are identified
- B. Evaluate the impact of information security risks
- C. Demonstrate that IT mitigating controls are in place
- D. Suggest new IT controls to mitigate operational risk

**Answer:** B

**Explanation:**

The job of the information security officer on such a team is to assess the risks to the business operation. Choice A is incorrect because information security is not limited to IT issues. Choice C is incorrect because at the time a team is formed to assess risk, it is premature to assume that any demonstration of IT controls will mitigate business operations risk. Choice D is incorrect because it is premature at the time of the formation of the team to assume that any suggestion of new IT controls will mitigate business operational risk.

**NEW QUESTION 179**

An information security manager at a global organization that is subject to regulation by multiple governmental jurisdictions with differing requirements should:

- A. bring all locations into conformity with the aggregate requirements of all governmental jurisdiction
- B. establish baseline standards for all locations and add supplemental standards as require
- C. bring all locations into conformity with a generally accepted set of industry best practice
- D. establish a baseline standard incorporating those requirements that all jurisdictions have in commo

**Answer:** B

**Explanation:**

It is more efficient to establish a baseline standard and then develop additional standards for locations that must meet specific requirements. Seeking a lowest common denominator or just using industry best practices may cause certain locations to fail regulatory compliance. The opposite approach—forcing all locations to be in compliance with the regulations places an undue burden on those locations.

**NEW QUESTION 184**

The FIRST step to create an internal culture that focuses on information security is to:

- A. implement stronger control
- B. conduct periodic awareness trainin
- C. actively monitor operation
- D. gain the endorsement of executive managemen

**Answer:** D

**Explanation:**

Endorsement of executive management in the form of policies provides direction and awareness. The implementation of stronger controls may lead to circumvention. Awareness training is important, but must be based on policies. Actively monitoring operations will not affect culture at all levels.

**NEW QUESTION 189**

Which of the following authentication methods prevents authentication replay?

- A. Password hash implementation
- B. Challenge/response mechanism
- C. Wired Equivalent Privacy (WEP) encryption usage
- D. HTTP Basic Authentication

**Answer:** B

**Explanation:**

A challenge .response mechanism prevents replay attacks by sending a different random challenge in each authentication event. The response is linked to that challenge. Therefore, capturing the authentication handshake and replaying it through the network will not work. Using hashes by itself will not prevent a replay. A WEP key will not prevent sniffing (it just takes a few more minutes to break the WEP key if the attacker does not already have it) and therefore will not be able to prevent recording and replaying an authentication handshake. HTTP Basic Authentication is clear text and has no mechanisms to prevent replay.

**NEW QUESTION 191**

Acceptable risk is achieved when:

- A. residual risk is minimize
- B. transferred risk is minimize
- C. control risk is minimize
- D. inherent risk is minimize

**Answer:** A

**Explanation:**

Residual risk is the risk that remains after putting into place an effective risk management program; therefore, acceptable risk is achieved when this amount is minimized. Transferred risk is risk that has been assumed by a third party and may not necessarily be equal to the minimal form of residual risk. Control risk is the risk that controls may not prevent/detect an incident with a measure of control effectiveness. Inherent risk cannot be minimized.

**NEW QUESTION 196**

After completing a full IT risk assessment, who can BEST decide which mitigating controls should be implemented?

- A. Senior management
- B. Business manager
- C. IT audit manager
- D. Information security officer (ISO)

**Answer:** B

**Explanation:**

The business manager will be in the best position, based on the risk assessment and mitigation proposals, to decide which controls should/could be implemented, in line with the business strategy and with budget. Senior management will have to ensure that the business manager has a clear understanding of the risk assessed but in no case will be in a position to decide on specific controls. The IT audit manager will take part in the process to identify threats and vulnerabilities, and to make recommendations for mitigations. The information security officer (ISO) could make some decisions regarding implementation of controls. However, the business manager will have a broader business view and full control over the budget and, therefore, will be in a better position to make strategic decisions.

#### **NEW QUESTION 201**

Before conducting a formal risk assessment of an organization's information resources, an information security manager should FIRST:

- A. map the major threats to business objective
- B. review available sources of risk informatio
- C. identify the value of the critical asset
- D. determine the financial impact if threats materializ

**Answer:** A

**Explanation:**

Risk mapping or a macro assessment of the major threats to the organization is a simple first step before performing a risk assessment. Compiling all available sources of risk information is part of the risk assessment. Choices C and D are also components of the risk assessment process, which are performed subsequent to the threats-business mapping.

#### **NEW QUESTION 206**

To determine the selection of controls required to meet business objectives, an information security manager should:

- A. prioritize the use of role-based access control
- B. focus on key control
- C. restrict controls to only critical application
- D. focus on automated control

**Answer:** B

**Explanation:**

Key controls primarily reduce risk and are most effective for the protection of information assets. The other choices could be examples of possible key controls.

#### **NEW QUESTION 207**

The PRIMARY purpose of using risk analysis within a security program is to:

- A. justify the security expenditur
- B. help businesses prioritize the assets to be protecte
- C. inform executive management of residual risk valu
- D. assess exposures and plan remediatio

**Answer:** D

**Explanation:**

Risk analysis explores the degree to which an asset needs protecting so this can be managed effectively. Risk analysis indirectly supports the security expenditure, but justifying the security expenditure is not its primary purpose. Helping businesses prioritize the assets to be protected is an indirect benefit of risk analysis, but not its primary purpose. Informing executive management of residual risk value is not directly relevant.

#### **NEW QUESTION 209**

One way to determine control effectiveness is by determining:

- A. whether it is preventive, detective or compensator
- B. the capability of providing notification of failur
- C. the test results of intended objective
- D. the evaluation and analysis of reliabilit

**Answer:** C

**Explanation:**

Control effectiveness requires a process to verify that the control process worked as intended. Examples such as dual-control or dual-entry bookkeeping provide verification and assurance that the process operated as intended. The type of control is not relevant, and notification of failure is not determinative of control strength. Reliability is not an indication of control strength; weak controls can be highly reliable, even if they are ineffective controls.

#### **NEW QUESTION 210**

The BEST strategy for risk management is to:

- A. achieve a balance between risk and organizational goal

- B. reduce risk to an acceptable leve
- C. ensure that policy development properly considers organizational risk
- D. ensure that all unmitigated risks are accepted by managemen

**Answer:** B

**Explanation:**

The best strategy for risk management is to reduce risk to an acceptable level, as this will take into account the organization's appetite for risk and the fact that it would not be practical to eliminate all risk. Achieving balance between risk and organizational goals is not always practical. Policy development must consider organizational risks as well as business objectives. It may be prudent to ensure that management understands and accepts risks that it is not willing to mitigate, but that is a practice and is not sufficient to l>e considered a strategy.

#### NEW QUESTION 215

The MOST effective use of a risk register is to:

- A. identify risks and assign roles and responsibilities for mitigatio
- B. identify threats and probabilitie
- C. facilitate a thorough review of all IT-related risks on a periodic basi
- D. record the annualized financial amount of expected losses due to risk

**Answer:** C

**Explanation:**

A risk register is more than a simple list—it should lie used as a tool to ensure comprehensive documentation, periodic review and formal update of all risk elements in the enterprise's IT and related organization. Identifying risks and assigning roles and responsibilities for mitigation are elements of the register. Identifying threats and probabilities are two elements that are defined in the risk matrix, as differentiated from the broader scope of content in, and purpose for, the risk register. While the annualized loss expectancy (ALE) should be included in the register, this quantification is only a single element in the overall risk analysis program.

#### NEW QUESTION 216

Which of the following would be the MOST important factor to be considered in the loss of mobile equipment with unencrypted data?

- A. Disclosure of personal information
- B. Sufficient coverage of the insurance policy for accidental losses
- C. Intrinsic value of the data stored on the equipment
- D. Replacement cost of the equipment

**Answer:** C

**Explanation:**

When mobile equipment is lost or stolen, the information contained on the equipment matters most in determining the impact of the loss. The more sensitive the information, the greater the liability. If staff carries mobile equipment for business purposes, an organization must develop a clear policy as to what information should be kept on the equipment and for what purpose. Personal information is not defined in the question as the data that were lost. Insurance may be a relatively smaller issue as compared with information theft or opportunity loss, although insurance is also an important factor for a successful business. Cost of equipment would be a less important issue as compared with other choices.

#### NEW QUESTION 217

Attackers who exploit cross-site scripting vulnerabilities take advantage of:

- A. a lack of proper input validation control
- B. weak authentication controls in the web application laye
- C. flawed cryptographic secure sockets layer (SSL) implementations and short key length
- D. implicit web application trust relationship

**Answer:** A

**Explanation:**

Cross-site scripting attacks inject malformed input. Attackers who exploit weak application authentication controls can gain unauthorized access to applications and this has little to do with cross-site scripting vulnerabilities. Attackers who exploit flawed cryptographic secure sockets layer (SSL) implementations and short key lengths can sniff network traffic and crack keys to gain unauthorized access to information. This has little to do with cross-site scripting vulnerabilities. Web application trust relationships do not relate directly to the attack.

#### NEW QUESTION 219

When performing an information risk analysis, an information security manager should FIRST:

- A. establish the ownership of asset
- B. evaluate the risks to the asset
- C. take an asset inventor
- D. categorize the asset

**Answer:** C

**Explanation:**

Assets must be inventoried before any of the other choices can be performed.

**NEW QUESTION 220**

The systems administrator did not immediately notify the security officer about a malicious attack. An information security manager could prevent this situation by:

- A. periodically testing the incident response plan
- B. regularly testing the intrusion detection system (IDS).
- C. establishing mandatory training of all personnel
- D. periodically reviewing incident response procedure

**Answer:** A

**Explanation:**

Security incident response plans should be tested to find any deficiencies and improve existing processes. Testing the intrusion detection system (IDS) is a good practice but would not have prevented this situation. All personnel need to go through formal training to ensure that they understand the process, tools and methodology involved in handling security incidents. However, testing of the actual plans is more effective in ensuring the process works as intended. Reviewing the response procedures is not enough; the security response plan needs to be tested on a regular basis.

**NEW QUESTION 221**

Previously accepted risk should be:

- A. re-assessed periodically since the risk can be escalated to an unacceptable level due to revised condition
- B. accepted permanently since management has already spent resources (time and labor) to conclude that the risk level is acceptable
- C. avoided next time since risk avoidance provides the best protection to the company
- D. removed from the risk log once it is accepted

**Answer:** A

**Explanation:**

Acceptance of risk should be regularly reviewed to ensure that the rationale for the initial risk acceptance is still valid within the current business context. The rationale for initial risk acceptance may no longer be valid due to change(s) and, hence, risk cannot be accepted permanently. Risk is an inherent part of business and it is impractical and costly to eliminate all risk. Even risks that have been accepted should be monitored for changing conditions that could alter the original decision.

**NEW QUESTION 225**

Phishing is BEST mitigated by which of the following?

- A. Security monitoring software
- B. Encryption
- C. Two-factor authentication
- D. User awareness

**Answer:** D

**Explanation:**

Phishing can best be detected by the user. It can be mitigated by appropriate user awareness. Security monitoring software would provide some protection, but would not be as effective as user awareness. Encryption and two-factor authentication would not mitigate this threat.

**NEW QUESTION 228**

The security responsibility of data custodians in an organization will include:

- A. assuming overall protection of information asset
- B. determining data classification level
- C. implementing security controls in products they install
- D. ensuring security measures are consistent with policy

**Answer:** D

**Explanation:**

Security responsibilities of data custodians within an organization include ensuring that appropriate security measures are maintained and are consistent with organizational policy. Executive management holds overall responsibility for protection of the information assets. Data owners determine data classification levels for information assets so that appropriate levels of controls can be provided to meet the requirements relating to confidentiality, integrity and availability. Implementation of information security in products is the responsibility of the IT developers.

**NEW QUESTION 232**

Which would be one of the BEST metrics an information security manager can employ to effectively evaluate the results of a security program?

- A. Number of controls implemented
- B. Percent of control objectives accomplished
- C. Percent of compliance with the security policy
- D. Reduction in the number of reported security incidents

**Answer:** B

**Explanation:**

Control objectives are directly related to business objectives; therefore, they would be the best metrics. Number of controls implemented does not have a direct relationship with the results of a security program. Percentage of compliance with the security policy and reduction in the number of security incidents are not as broad as choice B.

**NEW QUESTION 234**

After assessing and mitigating the risks of a web application, who should decide on the acceptance of residual application risks?

- A. Information security officer
- B. Chief information officer (CIO)
- C. Business owner
- D. Chief executive officer (CF.O)

**Answer:** C

**Explanation:**

The business owner of the application needs to understand and accept the residual application risks.

**NEW QUESTION 239**

Which of the following steps in conducting a risk assessment should be performed FIRST?

- A. Identity business assets
- B. Identify business risks
- C. Assess vulnerabilities
- D. Evaluate key controls

**Answer:** A

**Explanation:**

Risk assessment first requires one to identify the business assets that need to be protected before identifying the threats. The next step is to establish whether those threats represent business risk by identifying the likelihood and effect of occurrence, followed by assessing the vulnerabilities that may affect the security of the asset. This process establishes the control objectives against which key controls can be evaluated.

**NEW QUESTION 244**

What does a network vulnerability assessment intend to identify?

- A. 0-day vulnerabilities
- B. Malicious software and spyware
- C. Security design flaws
- D. Misconfiguration and missing updates

**Answer:** D

**Explanation:**

A network vulnerability assessment intends to identify known vulnerabilities based on common misconfigurations and missing updates. 0-day vulnerabilities by definition are not previously known and therefore are undetectable. Malicious software and spyware are normally addressed through antivirus and antispyware policies. Security design flaws require a deeper level of analysis.

**NEW QUESTION 247**

Which program element should be implemented FIRST in asset classification and control?

- A. Risk assessment
- B. Classification
- C. Valuation
- D. Risk mitigation

**Answer:** C

**Explanation:**

Valuation is performed first to identify and understand the assets needing protection. Risk assessment is performed to identify and quantify threats to information assets that are selected by the first step, valuation. Classification and risk mitigation are steps following valuation.

**NEW QUESTION 249**

An organization has a process in place that involves the use of a vendor. A risk assessment was completed during the development of the process. A year after the implementation a monetary decision has been made to use a different vendor. What, if anything, should occur?

- A. Nothing, since a risk assessment was completed during developmen
- B. A vulnerability assessment should be conducte
- C. A new risk assessment should be performe
- D. The new vendor's SAS 70 type II report should be reviewe

**Answer:** C

**Explanation:**

The risk assessment process is continual and any changes to an established process should include a new- risk assessment. While a review of the SAS 70 report and a vulnerability assessment may be components of a risk assessment, neither would constitute sufficient due diligence on its own.

**NEW QUESTION 253**

Which of the following BEST describes the scope of risk analysis?

- A. Key financial systems
- B. Organizational activities
- C. Key systems and infrastructure
- D. Systems subject to regulatory compliance

**Answer: B**

**Explanation:**

Risk analysis should include all organizational activities. It should not be limited to subsets of systems or just systems and infrastructure.

**NEW QUESTION 258**

The recovery point objective (RPO) requires which of the following?

- A. Disaster declaration
- B. Before-image restoration
- C. System restoration
- D. After-image processing

**Answer: B**

**Explanation:**

The recovery point objective (RPO) is the point in the processing flow at which system recovery should occur. This is the predetermined state of the application processing and data used to restore the system and to continue the processing flow. Disaster declaration is independent of this processing checkpoint. Restoration of the system can occur at a later date, as does the return to normal, after-image processing.

**NEW QUESTION 263**

Risk assessment is MOST effective when performed:

- A. at the beginning of security program developmen
- B. on a continuous basi
- C. while developing the business case for the security progra
- D. during the business change proces

**Answer: B**

**Explanation:**

Risk assessment needs to be performed on a continuous basis because of organizational and technical changes. Risk assessment must take into account all significant changes in order to be effective.

**NEW QUESTION 264**

A company's mail server allows anonymous file transfer protocol (FTP) access which could be exploited. What process should the information security manager deploy to determine the necessity for remedial action?

- A. A penetration test
- B. A security baseline review
- C. A risk assessment
- D. A business impact analysis (BIA)

**Answer: C**

**Explanation:**

A risk assessment will identify- the business impact of such vulnerability being exploited and is, thus, the correct process. A penetration test or a security baseline review may identify the vulnerability but not the remedy. A business impact analysis (BIA) will more likely identify the impact of the loss of the mail server.

**NEW QUESTION 265**

Which of the following measures would be MOST effective against insider threats to confidential information?

- A. Role-based access control
- B. Audit trail monitoring
- C. Privacy policy
- D. Defense-in-depth

**Answer: A**

**Explanation:**

Role-based access control provides access according to business needs; therefore, it reduces unnecessary- access rights and enforces accountability. Audit trail monitoring is a detective control, which is 'after the fact.' Privacy policy is not relevant to this risk. Defense-in-depth primarily focuses on external threats

**NEW QUESTION 270**

The MAIN reason why asset classification is important to a successful information security program is because classification determines:

- A. the priority and extent of risk mitigation effort
- B. the amount of insurance needed in case of loss
- C. the appropriate level of protection to the asset
- D. how protection levels compare to peer organization

**Answer: C**

**Explanation:**

Protection should be proportional to the value of the asset. Classification is based upon the value of the asset to the organization. The amount of insurance needed in case of loss may not be applicable in each case. Peer organizations may have different classification schemes for their assets.

**NEW QUESTION 274**

An organization is already certified to an international security standard. Which mechanism would BEST help to further align the organization with other data security regulatory requirements as per new business needs?

- A. Key performance indicators (KPIs)
- B. Business impact analysis (BIA)
- C. Gap analysis
- D. Technical vulnerability assessment

**Answer: C**

**Explanation:**

Gap analysis would help identify the actual gaps between the desired state and the current implementation of information security management. BIA is primarily used for business continuity planning. Technical vulnerability assessment is used for detailed assessment of technical controls, which would come later in the process and would not provide complete information in order to identify gaps.

**NEW QUESTION 275**

Data owners are PRIMARILY responsible for establishing risk mitigation methods to address which of the following areas?

- A. Platform security
- B. Entitlement changes
- C. Intrusion detection
- D. Antivirus controls

**Answer: B**

**Explanation:**

Data owners are responsible for assigning user entitlements and approving access to the systems for which they are responsible. Platform security, intrusion detection and antivirus controls are all within the responsibility of the information security manager.

**NEW QUESTION 280**

A common concern with poorly written web applications is that they can allow an attacker to:

- A. gain control through a buffer overflow
- B. conduct a distributed denial of service (DoS) attack
- C. abuse a race condition
- D. inject structured query language (SQL) statement

**Answer: D**

**Explanation:**

Structured query language (SQL) injection is one of the most common and dangerous web application vulnerabilities. Buffer overflows and race conditions are very difficult to find and exploit on web applications. Distributed denial of service (DoS) attacks have nothing to do with the quality of a web application.

**NEW QUESTION 283**

Which of the following results from the risk assessment process would BEST assist risk management decision making?

- A. Control risk
- B. Inherent risk
- C. Risk exposure
- D. Residual risk

**Answer: D**

**Explanation:**

Residual risk provides management with sufficient information to decide to the level of risk that an organization is willing to accept. Control risk is the risk that a control may not succeed in preventing an undesirable event. Risk exposure is the likelihood of an undesirable event occurring. Inherent risk is an important factor to be considered during the risk assessment.

**NEW QUESTION 288**

Which of the following are the essential ingredients of a business impact analysis (BIA)?

- A. Downtime tolerance, resources and criticality
- B. Cost of business outages in a year as a factor of the security budget
- C. Business continuity testing methodology being deployed
- D. Structure of the crisis management team

**Answer:** A

**Explanation:**

The main purpose of a BIA is to measure the downtime tolerance, associated resources and criticality of a business function. Options B, C and D are all associated with business continuity planning, but are not related to the BIA.

**NEW QUESTION 291**

What mechanisms are used to identify deficiencies that would provide attackers with an opportunity to compromise a computer system?

- A. Business impact analyses
- B. Security gap analyses
- C. System performance metrics
- D. Incident response processes

**Answer:** B

**Explanation:**

A security gap analysis is a process which measures all security controls in place against typically good business practice, and identifies related weaknesses. A business impact analysis is less suited to identify security deficiencies. System performance metrics may indicate security weaknesses, but that is not their primary purpose. Incident response processes exist for cases where security weaknesses are exploited.

**NEW QUESTION 294**

To ensure that payroll systems continue on in an event of a hurricane hitting a data center, what would be the FIRST crucial step an information security manager would take in ensuring business continuity planning?

- A. Conducting a qualitative and quantitative risk analysis
- B. Assigning value to the asset
- C. Weighing the cost of implementing the plan v
- D. financial loss
- E. Conducting a business impact analysis (BIA).

**Answer:** D

**Explanation:**

BIA is an essential component of an organization's business continuity plan; it includes an exploratory component to reveal any vulnerabilities and a planning component to develop strategies for minimizing risk. It is the first crucial step in business continuity planning. Qualitative and quantitative risk analysis will have been completed to define the dangers to individuals, businesses and government agencies posed by potential natural and human-caused adverse events. Assigning value to assets is part of the BIA process. Weighing the cost of implementing the plan vs. financial loss is another part of the BIA.

**NEW QUESTION 295**

Which of the following would generally have the GREATEST negative impact on an organization?

- A. Theft of computer software
- B. Interruption of utility services
- C. Loss of customer confidence
- D. Internal fraud resulting in monetary loss

**Answer:** C

**Explanation:**

Although the theft of software, interruption of utility services and internal frauds are all significant, the loss of customer confidence is the most damaging and could cause the business to fail.

**NEW QUESTION 299**

Which of the following techniques MOST clearly indicates whether specific risk-reduction controls should be implemented?

- A. Countermeasure cost-benefit analysis
- B. Penetration testing
- C. Frequent risk assessment programs
- D. Annual loss expectancy (ALE) calculation

**Answer:** A

**Explanation:**

In a countermeasure cost-benefit analysis, the annual cost of safeguards is compared with the expected cost of loss. This can then be used to justify a specific control measure. Penetration testing may indicate the extent of a weakness but, by itself, will not establish the cost/benefit of a control. Frequent risk assessment programs will certainly establish what risk exists but will not determine the maximum cost of controls. Annual loss expectancy (ALE) is a measure which will contribute to the value of the risk but, alone, will not justify a control.

#### **NEW QUESTION 300**

Which of the following attacks is BEST mitigated by utilizing strong passwords?

- A. Man-in-the-middle attack
- B. Brute force attack
- C. Remote buffer overflow
- D. Root kit

**Answer:** B

**Explanation:**

A brute force attack is normally successful against weak passwords, whereas strong passwords would not prevent any of the other attacks. Man-in-the-middle attacks intercept network traffic, which could contain passwords, but is not naturally password-protected. Remote buffer overflows rarely require a password to exploit a remote host. Root kits hook into the operating system's kernel and, therefore, operate underneath any authentication mechanism.

#### **NEW QUESTION 303**

Based on the information provided, which of the following situations presents the GREATEST information security risk for an organization with multiple, but small, domestic processing locations?

- A. Systems operation procedures are not enforced
- B. Change management procedures are poor
- C. Systems development is outsourced
- D. Systems capacity management is not performed

**Answer:** B

**Explanation:**

The lack of change management is a severe omission and will greatly increase information security risk. Since procedures are generally nonauthoritative, their lack of enforcement is not a primary concern. Systems that are developed by third-party vendors are becoming commonplace and do not represent an increase in security risk as much as poor change management. Poor capacity management may not necessarily represent a security risk.

#### **NEW QUESTION 306**

The criticality and sensitivity of information assets is determined on the basis of:

- A. threat assessmen
- B. vulnerability assessmen
- C. resource dependency assessmen
- D. impact assessmen

**Answer:** D

**Explanation:**

The criticality and sensitivity of information assets depends on the impact of the probability of the threats exploiting vulnerabilities in the asset, and takes into consideration the value of the assets and the impairment of the value. Threat assessment lists only the threats that the information asset is exposed to. It does not consider the value of the asset and impact of the threat on the value. Vulnerability assessment lists only the vulnerabilities inherent in the information asset that can attract threats. It does not consider the value of the asset and the impact of perceived threats on the value. Resource dependency assessment provides process needs but not impact.

#### **NEW QUESTION 308**

The MOST appropriate owner of customer data stored in a central database, used only by an organization's sales department, would be the:

- A. sales departmen
- B. database administrato
- C. chief information officer (CIO).
- D. head of the sales departmen

**Answer:** D

**Explanation:**

The owner of the information asset should be the person with the decision-making power in the department deriving the most benefit from the asset. In this case, it would be the head of the sales department. The organizational unit cannot be the owner of the asset because that removes personal responsibility. The database administrator is a custodian. The chief information officer (CIO) would not be an owner of this database because the CTO is less likely to be knowledgeable about the specific needs of sales operations and security concerns.

**NEW QUESTION 310**

The valuation of IT assets should be performed by:

- A. an IT security manager
- B. an independent security consultant
- C. the chief financial officer (CFO).
- D. the information owner

**Answer:** D

**Explanation:**

Information asset owners are in the best position to evaluate the value added by the IT asset under review within a business process, thanks to their deep knowledge of the business processes and of the functional IT requirements. An IT security manager is an expert of the IT risk assessment methodology and IT asset valuation mechanisms. However, the manager could not have a deep understanding of all the business processes of the firm. An IT security subject matter expert will take part of the process to identify threats and vulnerabilities and will collaborate with the business information asset owner to define the risk profile of the asset. A chief financial officer (CFO) will have an overall costs picture but not detailed enough to evaluate the value of each IT asset.

**NEW QUESTION 315**

A security risk assessment exercise should be repeated at regular intervals because:

- A. business threats are constantly changing
- B. omissions in earlier assessments can be addressed
- C. repetitive assessments allow various methodologies
- D. they help raise awareness on security in the business

**Answer:** A

**Explanation:**

As business objectives and methods change, the nature and relevance of threats change as well. Choice B does not, by itself, justify regular reassessment. Choice C is not necessarily true in all cases. Choice D is incorrect because there are better ways of raising security awareness than by performing a risk assessment.

**NEW QUESTION 318**

The PRIMARY reason for initiating a policy exception process is when:

- A. operations are too busy to comply
- B. the risk is justified by the benefits
- C. policy compliance would be difficult to enforce
- D. users may initially be inconvenienced

**Answer:** B

**Explanation:**

Exceptions to policy are warranted in circumstances where compliance may be difficult or impossible and the risk of noncompliance is outweighed by the benefits. Being busy is not a justification for policy exceptions, nor is the fact that compliance cannot be enforced. User inconvenience is not a reason to automatically grant exception to a policy.

**NEW QUESTION 319**

Which of the following is the MAIN reason for performing risk assessment on a continuous basis'?

- A. Justification of the security budget must be continually made
- B. New vulnerabilities are discovered every day
- C. The risk environment is constantly changing
- D. Management needs to be continually informed about emerging risk

**Answer:** C

**Explanation:**

The risk environment is impacted by factors such as changes in technology, and business strategy. These changes introduce new threats and vulnerabilities to the organization. As a result, risk assessment should be performed continuously. Justification of a budget should never be the main reason for performing a risk assessment. New vulnerabilities should be managed through a patch management process. Informing management about emerging risks is important, but is not the main driver for determining when a risk assessment should be performed.

**NEW QUESTION 322**

A risk management program should reduce risk to:

- A. zero
- B. an acceptable level
- C. an acceptable percent of revenue
- D. an acceptable probability of occurrence

**Answer:** B

**Explanation:**

Risk should be reduced to an acceptable level based on the risk preference of the organization. Reducing risk to zero is impractical and could be cost-prohibitive. Tying risk to a percentage of revenue is inadvisable since there is no direct correlation between the two. Reducing the probability of risk occurrence may not always be possible, as in the case of natural disasters. The focus should be on reducing the impact to an acceptable level to the organization, not reducing the probability of the risk.

**NEW QUESTION 323**

Which of the following steps should be performed FIRST in the risk assessment process?

- A. Staff interviews
- B. Threat identification
- C. Asset identification and valuation
- D. Determination of the likelihood of identified risks

**Answer: C**

**Explanation:**

The first step in the risk assessment methodology is a system characterization, or identification and valuation, of all of the enterprise's assets to define the boundaries of the assessment. Interviewing is a valuable tool to determine qualitative information about an organization's objectives and tolerance for risk. Interviews are used in subsequent steps. Identification of threats comes later in the process and should not be performed prior to an inventory since many possible threats will not be applicable if there is no asset at risk. Determination of likelihood comes later in the risk assessment process.

**NEW QUESTION 326**

Which of the following groups would be in the BEST position to perform a risk analysis for a business?

- A. External auditors
- B. A peer group within a similar business
- C. Process owners
- D. A specialized management consultant

**Answer: C**

**Explanation:**

Process owners have the most in-depth knowledge of risks and compensating controls within their environment. External parties do not have that level of detailed knowledge on the inner workings of the business. Management consultants are expected to have the necessary skills in risk analysis techniques but are still less effective than a group with intimate knowledge of the business.

**NEW QUESTION 331**

A business impact analysis (BIA) is the BEST tool for calculating:

- A. total cost of ownership
- B. priority of restoration
- C. annualized loss expectancy (ALE).
- D. residual risk

**Answer: B**

**Explanation:**

A business impact analysis (BIA) is the best tool for calculating the priority of restoration for applications. It is not used to determine total cost of ownership, annualized loss expectancy (ALE) or residual risk to the organization.

**NEW QUESTION 335**

A mission-critical system has been identified as having an administrative system account with attributes that prevent locking and change of privileges and name. Which would be the BEST approach to prevent successful brute forcing of the account?

- A. Prevent the system from being accessed remotely
- B. Create a strong random password
- C. Ask for a vendor patch
- D. Track usage of the account by audit trails

**Answer: B**

**Explanation:**

Creating a strong random password reduces the risk of a successful brute force attack by exponentially increasing the time required. Preventing the system from being accessed remotely is not always an option in mission-critical systems and still leaves local access risks. Vendor patches are not always available, tracking usage is a detective control and will not prevent an attack.

**NEW QUESTION 339**

A risk assessment should be conducted:

- A. once a year for each business process and subprocess
- B. every three to six months for critical business processes
- C. by external parties to maintain objectivity
- D. annually or whenever there is a significant change

**Answer:** D

**Explanation:**

Risks are constantly changing. Choice D offers the best alternative because it takes into consideration a reasonable time frame and allows flexibility to address significant change. Conducting a risk assessment once a year is insufficient if important changes take place. Conducting a risk assessment every three-to-six months for critical processes may not be necessary, or it may not address important changes in a timely manner. It is not necessary for assessments to be performed by external parties.

#### **NEW QUESTION 344**

After a risk assessment study, a bank with global operations decided to continue doing business in certain regions of the world where identity theft is rampant. The information security manager should encourage the business to:

- A. increase its customer awareness efforts in those region
- B. implement monitoring techniques to detect and react to potential frau
- C. outsource credit card processing to a third part
- D. make the customer liable for losses if they fail to follow the bank's advic

**Answer:** B

**Explanation:**

While customer awareness will help mitigate the risks, this is insufficient on its own to control fraud risk. Implementing monitoring techniques which will detect and deal with potential fraud cases is the most effective way to deal with this risk. If the bank outsources its processing, the bank still retains liability. While making the customer liable for losses is a possible approach, nevertheless, the bank needs to be seen to be proactive in managing its risks.

#### **NEW QUESTION 346**

Which of the following would be MOST relevant to include in a cost-benefit analysis of a two-factor authentication system?

- A. Annual loss expectancy (ALE) of incidents
- B. Frequency of incidents
- C. Total cost of ownership (TCO)
- D. Approved budget for the project

**Answer:** C

**Explanation:**

The total cost of ownership (TCO) would be the most relevant piece of information in that it would establish a cost baseline and it must be considered for the full life cycle of the control. Annual loss expectancy (ALE) and the frequency of incidents could help measure the benefit, but would have more of an indirect relationship as not all incidents may be mitigated by implementing a two-factor authentication system. The approved budget for the project may have no bearing on what the project may actually cost.

#### **NEW QUESTION 348**

An information security organization should PRIMARILY:

- A. support the business objectives of the company by providing security-related support service
- B. be responsible for setting up and documenting the information security responsibilities of the information security team member
- C. ensure that the information security policies of the company are in line with global best practices and standard
- D. ensure that the information security expectations are conveyed to employee

**Answer:** A

**Explanation:**

The information security organization is responsible for options B and D within an organization, but they are not its primary mission. Reviewing and adopting appropriate standards (option C) is a requirement. The primary objective of an information security organization is to ensure that security supports the overall business objectives of the company.

#### **NEW QUESTION 350**

Which of the following BEST indicates a successful risk management practice?

- A. Overall risk is quantified
- B. Inherent risk is eliminated
- C. Residual risk is minimized
- D. Control risk is tied to business units

**Answer:** C

**Explanation:**

A successful risk management practice minimizes the residual risk to the organization. Choice A is incorrect because the fact that overall risk has been quantified does not necessarily indicate the existence of a successful risk management practice. Choice B is incorrect since it is virtually impossible to eliminate inherent risk. Choice D is incorrect because, although the tying of control risks to business may improve accountability, this is not as desirable as minimizing residual risk.

#### **NEW QUESTION 352**

Information security managers should use risk assessment techniques to:

- A. justify selection of risk mitigation strategie
- B. maximize the return on investment (RO
- C. provide documentation for auditors and regulator
- D. quantify risks that would otherwise be subjectiv

**Answer:** A

**Explanation:**

Information security managers should use risk assessment techniques to justify and implement a risk mitigation strategy as efficiently as possible. None of the other choices accomplishes that task, although they are important components.

#### **NEW QUESTION 356**

In a business impact analysis, the value of an information system should be based on the overall cost:

- A. of recover
- B. to recreat
- C. if unavailabl
- D. of emergency operation

**Answer:** C

**Explanation:**

The value of an information system should be based on the cost incurred if the system were to become unavailable. The cost to design or recreate the system is not as relevant since a business impact analysis measures the impact that would occur if an information system were to become unavailable. Similarly, the cost of emergency operations is not as relevant.

#### **NEW QUESTION 358**

The PRIMARY goal of a corporate risk management program is to ensure that an organization's:

- A. IT assets in key business functions are protecte
- B. business risks are addressed by preventive control
- C. stated objectives are achievabl
- D. IT facilities and systems are always availabl

**Answer:** C

**Explanation:**

Risk management's primary goal is to ensure an organization maintains the ability to achieve its objectives. Protecting IT assets is one possible goal as well as ensuring infrastructure and systems availability. However, these should be put in the perspective of achieving an organization's objectives. Preventive controls are not always possible or necessary; risk management will address issues with an appropriate mix of preventive and corrective controls.

#### **NEW QUESTION 360**

When performing a risk assessment, the MOST important consideration is that:

- A. management supports risk mitigation effort
- B. annual loss expectations (ALEs) have been calculated for critical asset
- C. assets have been identified and appropriately value
- D. attack motives, means and opportunities be understoo

**Answer:** C

**Explanation:**

Identification and valuation of assets provides the basis for risk management efforts as it relates to the criticality and sensitivity of assets. Management support is always important, but is not relevant when determining the proportionality of risk management efforts. ALE calculations are only valid if assets have first been identified and appropriately valued. Motives, means and opportunities should already be factored in as a part of a risk assessment.

#### **NEW QUESTION 363**

In assessing the degree to which an organization may be affected by new privacy legislation, information security management should FIRST:

- A. develop an operational plan for achieving compliance with the legislatio
- B. identify systems and processes that contain privacy component
- C. restrict the collection of personal information until complian
- D. identify privacy legislation in other countries that may contain similar requirement

**Answer:** B

**Explanation:**

Identifying the relevant systems and processes is the best first step. Developing an operational plan for achieving compliance with the legislation is incorrect because it is not the first step. Restricting the collection of personal information comes later. Identifying privacy legislation in other countries would not add much value.

#### **NEW QUESTION 368**

Which of the following risks would BEST be assessed using qualitative risk assessment techniques?

- A. Theft of purchased software
- B. Power outage lasting 24 hours
- C. Permanent decline in customer confidence
- D. Temporary loss of e-mail due to a virus attack

**Answer:** C

**Explanation:**

A permanent decline in customer confidence does not lend itself well to measurement by quantitative techniques. Qualitative techniques are more effective in evaluating things such as customer loyalty and goodwill. Theft of software, power outages and temporary loss of e-mail can be quantified into monetary amounts easier than can be assessed with quantitative techniques.

#### **NEW QUESTION 372**

Which two components PRIMARILY must be assessed in an effective risk analysis?

- A. Visibility and duration
- B. Likelihood and impact
- C. Probability and frequency
- D. Financial impact and duration

**Answer:** B

**Explanation:**

The probability or likelihood of the event and the financial impact or magnitude of the event must be assessed first. Duration refers to the length of the event; it is important in order to assess impact but is secondary. Once the likelihood is determined, the frequency is also important to determine overall impact.

#### **NEW QUESTION 377**

An organization has decided to implement additional security controls to treat the risks of a new process. This is an example of:

- A. eliminating the risk
- B. transferring the risk
- C. mitigating the risk
- D. accepting the risk

**Answer:** C

**Explanation:**

Risk can never be eliminated entirely. Transferring the risk gives it away such as buying insurance so the insurance company can take the risk. Implementing additional controls is an example of mitigating risk. Doing nothing to mitigate the risk would be an example of accepting risk.

#### **NEW QUESTION 382**

Which of the following is the MOST appropriate use of gap analysis?

- A. Evaluating a business impact analysis (BIA)
- B. Developing a balanced business scorecard
- C. Demonstrating the relationship between controls
- D. Measuring current state v
- E. desired future state

**Answer:** D

**Explanation:**

A gap analysis is most useful in addressing the differences between the current state and an ideal future state. It is not as appropriate for evaluating a business impact analysis (BIA), developing a balanced business scorecard or demonstrating the relationship between variables.

#### **NEW QUESTION 387**

The PRIMARY reason for assigning classes of sensitivity and criticality to information resources is to provide a basis for:

- A. determining the scope for inclusion in an information security program
- B. defining the level of access control
- C. justifying costs for information resource
- D. determining the overall budget of an information security program

**Answer:** B

**Explanation:**

The assigned class of sensitivity and criticality of the information resource determines the level of access controls to be put in place. The assignment of sensitivity and criticality takes place with the information assets that have already been included in the information security program and has only an indirect bearing on the costs to be incurred. The assignment of sensitivity and criticality contributes to, but does not decide, the overall budget of the information security program.

**NEW QUESTION 389**

Which of the following is the MOST effective solution for preventing internal users from modifying sensitive and classified information?

- A. Baseline security standards
- B. System access violation logs
- C. Role-based access controls
- D. Exit routines

**Answer:** C

**Explanation:**

Role-based access controls help ensure that users only have access to files and systems appropriate for their job role. Violation logs are detective and do not prevent unauthorized access. Baseline security standards do not prevent unauthorized access. Exit routines are dependent upon appropriate role-based access.

**NEW QUESTION 390**

An information security manager uses security metrics to measure the:

- A. performance of the information security progra
- B. performance of the security baselin
- C. effectiveness of the security risk analysi
- D. effectiveness of the incident response tea

**Answer:** A

**Explanation:**

The security metrics should be designed so that there is a relationship to the performance of the overall security program in terms of effectiveness measurement. Use of security metrics occurs after the risk assessment process and does not measure it. Measurement of the incident response team performance is included in the overall program performance, so this is an incomplete answer.

**NEW QUESTION 394**

Which of the following would be the BEST metric for the IT risk management process?

- A. Number of risk management action plans
- B. Percentage of critical assets with budgeted remedial
- C. Percentage of unresolved risk exposures
- D. Number of security incidents identified

**Answer:** B

**Explanation:**

Percentage of unresolved risk exposures and the number of security incidents identified contribute to the IT risk management process, but the percentage of critical assets with budgeted remedial is the most indicative metric. Number of risk management action plans is not useful for assessing the quality of the process.

**NEW QUESTION 395**

Who can BEST advocate the development of and ensure the success of an information security program?

- A. Internal auditor
- B. Chief operating officer (COO)
- C. Steering committee
- D. IT management

**Answer:** C

**Explanation:**

Senior management represented in the security steering committee is in the best position to advocate the establishment of and continued support for an information security program. The chief operating officer (COO) will be a member of that committee. An internal auditor is a good advocate but is secondary to the influence of senior management. IT management has a lesser degree of influence and would also be part of the steering committee.

**NEW QUESTION 398**

Which of the following is the BEST metric for evaluating the effectiveness of security awareness twining? The number of:

- A. password reset
- B. reported incident
- C. incidents resolve
- D. access rule violation

**Answer:** B

**Explanation:**

Reported incidents will provide an indicator of the awareness level of staff. An increase in reported incidents could indicate that the staff is paying more attention to security. Password resets and access rule violations may or may not have anything to do with awareness levels. The number of incidents resolved may not correlate to staff awareness.

**NEW QUESTION 399**

Which of the following is the MOST appropriate frequency for updating antivirus signature files for antivirus software on production servers?

- A. Daily
- B. Weekly
- C. Concurrently with O/S patch updates
- D. During scheduled change control updates

**Answer:** A

**Explanation:**

New viruses are being introduced almost daily. The effectiveness of virus detection software depends on frequent updates to its virus signatures, which are stored on antivirus signature files so updates may be carried out several times during the day. At a minimum, daily updating should occur. Patches may occur less frequently. Weekly updates may potentially allow new viruses to infect the system.

**NEW QUESTION 402**

When configuring a biometric access control system that protects a high-security data center, the system's sensitivity level should be set:

- A. to a higher false reject rate (FRR).
- B. to a lower crossover error rate
- C. to a higher false acceptance rate (FAR).
- D. exactly to the crossover error rate

**Answer:** A

**Explanation:**

Biometric access control systems are not infallible. When tuning the solution, one has to adjust the sensitivity level to give preference either to false reject rate (type I error rate) where the system will be more prone to err denying access to a valid user or erring and allowing access to an invalid user. As the sensitivity of the biometric system is adjusted, these values change inversely. At one point, the two values intersect and are equal. This condition creates the crossover error rate, which is a measure of the system accuracy. In systems where the possibility of false rejects is a problem, it may be necessary to reduce sensitivity and thereby increase the number of false accepts. This is sometimes referred to as equal error rate (EER). In a very sensitive system, it may be desirable to minimize the number of false accepts—the number of unauthorized persons allowed access. To do this, the system is tuned to be more sensitive, which causes the false rejects the number of authorized persons disallowed access to increase.

**NEW QUESTION 404**

Which of the following is MOST effective in preventing the introduction of a code modification that may reduce the security of a critical business application?

- A. Patch management
- B. Change management
- C. Security metrics
- D. Version control

**Answer:** B

**Explanation:**

Change management controls the process of introducing changes to systems. Failure to have good change management may introduce new weaknesses into otherwise secure systems. Patch management corrects discovered weaknesses by applying a correction to the original program code. Security metrics provide a means for measuring effectiveness. Version control is a subset of change management.

**NEW QUESTION 409**

Which of the following guarantees that data in a file have not changed?

- A. Inspecting the modified date of the file
- B. Encrypting the file with symmetric encryption
- C. Using stringent access control to prevent unauthorized access
- D. Creating a hash of the file, then comparing the file hashes

**Answer:** D

**Explanation:**

A hashing algorithm can be used to mathematically ensure that data haven't been changed by hashing a file and comparing the hashes after a suspected change.

**NEW QUESTION 411**

An information security program should be sponsored by:

- A. infrastructure management
- B. the corporate audit department
- C. key business process owner
- D. information security management

**Answer:** C

**Explanation:**

The information security program should ideally be sponsored by business managers, as represented by key business process owners. Infrastructure management is not sufficiently independent and lacks the necessary knowledge regarding specific business requirements. A corporate audit department is not in as good a position to fully understand how an information security program needs to meet the needs of the business. Audit independence and objectivity will be lost, impeding traditional audit functions. Information security implements and executes the program. Although it should promote it at all levels, it cannot sponsor the effort due to insufficient operational knowledge and lack of proper authority.

**NEW QUESTION 413**

What is the MOST important item to be included in an information security policy?

- A. The definition of roles and responsibilities
- B. The scope of the security program
- C. The key objectives of the security program
- D. Reference to procedures and standards of the security program

**Answer: C**

**Explanation:**

Stating the objectives of the security program is the most important element to ensure alignment with business goals. The other choices are part of the security policy, but they are not as important.

**NEW QUESTION 414**

An operating system (OS) noncritical patch to enhance system security cannot be applied because a critical application is not compatible with the change. Which of the following is the BEST solution?

- A. Rewrite the application to conform to the upgraded operating system
- B. Compensate for not installing the patch with mitigating controls
- C. Alter the patch to allow the application to run in a privileged state
- D. Run the application on a test platform; tune production to allow patch and application

**Answer: B**

**Explanation:**

Since the operating system (OS) patch will adversely impact a critical application, a mitigating control should be identified that will provide an equivalent level of security. Since the application is critical, the patch should not be applied without regard for the application; business requirements must be considered. Altering the OS patch to allow the application to run in a privileged state may create new security weaknesses. Finally, running a production application on a test platform is not an acceptable alternative since it will mean running a critical production application on a platform not subject to the same level of security controls.

**NEW QUESTION 415**

Who can BEST approve plans to implement an information security governance framework?

- A. Internal auditor
- B. Information security management
- C. Steering committee
- D. Infrastructure management

**Answer: C**

**Explanation:**

Senior management that is part of the security steering committee is in the best position to approve plans to implement an information security governance framework. An internal auditor is secondary to the authority and influence of senior management. Information security management should not have the authority to approve the security governance framework. Infrastructure management will not be in the best position since it focuses more on the technologies than on the business.

**NEW QUESTION 416**

Which of the following is the BEST method to provide a new user with their initial password for e-mail system access?

- A. Interoffice a system-generated complex password with 30 days expiration
- B. Give a dummy password over the telephone set for immediate expiration
- C. Require no password but force the user to set their own in 10 days
- D. Set initial password equal to the user ID with expiration in 30 days

**Answer: B**

**Explanation:**

Documenting the password on paper is not the best method even if sent through interoffice mail if the password is complex and difficult to memorize, the user will likely keep the printed password and this creates a security concern. A dummy (temporary) password that will need to be changed upon first logon is the best method because it is reset immediately and replaced with the user's choice of password, which will make it easier for the user to remember. If it is given to the wrong person, the legitimate user will likely notify security if still unable to access the system, so the security risk is low. Setting an account with no initial password is a security concern even if it is just for a few days. Choice D provides the greatest security threat because user IDs are typically known by both users and security staff, thus compromising access for up to 30 days.

**NEW QUESTION 420**

The IT function has declared that, when putting a new application into production, it is not necessary to update the business impact analysis (BIA) because it does not produce modifications in the business processes. The information security manager should:

- A. verify the decision with the business unit
- B. check the system's risk analysis
- C. recommend update after post implementation review
- D. request an audit review

**Answer:** A

**Explanation:**

Verifying the decision with the business units is the correct answer because it is not the IT function's responsibility to decide whether a new application modifies business processes. Choice B does not consider the change in the applications. Choices C and D delay the update.

#### NEW QUESTION 423

A digital signature using a public key infrastructure (PKI) will:

- A. not ensure the integrity of a message
- B. rely on the extent to which the certificate authority (CA) is trusted
- C. require two parties to the message exchange
- D. provide a high level of confidentiality

**Answer:** B

**Explanation:**

The certificate authority (CA) is a trusted third party that attests to the identity of the signatory, and reliance will be a function of the level of trust afforded the CA. A digital signature would provide a level of assurance of message integrity, but it is a three-party exchange, including the CA. Digital signatures do not require encryption of the message in order to preserve confidentiality.

#### NEW QUESTION 427

The MAIN advantage of implementing automated password synchronization is that it:

- A. reduces overall administrative workload
- B. increases security between multi-tier systems
- C. allows passwords to be changed less frequently
- D. reduces the need for two-factor authentication

**Answer:** A

**Explanation:**

Automated password synchronization reduces the overall administrative workload of resetting passwords. It does not increase security between multi-tier systems, allow passwords to be changed less frequently or reduce the need for two-factor authentication.

#### NEW QUESTION 430

The MOST effective way to ensure that outsourced service providers comply with the organization's information security policy would be:

- A. service level monitoring
- B. penetration testing
- C. periodic audits
- D. security awareness training

**Answer:** C

**Explanation:**

Regular audits can spot any gap in the information security compliance. Service level monitoring can only pinpoint operational issues in the organization's operational environment. Penetration testing can identify security vulnerability but cannot ensure information compliance. Training can increase users' awareness on the information security policy, but is not more effective than auditing.

#### NEW QUESTION 435

At what stage of the applications development process would encryption key management initially be addressed?

- A. Requirements development
- B. Deployment
- C. Systems testing
- D. Code reviews

**Answer:** A

**Explanation:**

Encryption key management has to be integrated into the requirements of the application's design. During systems testing and deployment would be too late since the requirements have already been agreed upon. Code reviews are part of the final quality assurance (QA) process and would also be too late in the process.

#### NEW QUESTION 438

Which of the following is the MOST effective solution for preventing individuals external to the organization from modifying sensitive information on a corporate database?

- A. Screened subnets
- B. Information classification policies and procedures
- C. Role-based access controls
- D. Intrusion detection system (IDS)

**Answer:** A

**Explanation:**

Screened subnets are demilitarized zones (DMZs) and are oriented toward preventing attacks on an internal network by external users. The policies and procedures to classify information will ultimately result in better protection but they will not prevent actual modification. Role-based access controls would help ensure that users only had access to files and systems appropriate for their job role. Intrusion detection systems (IDS) are useful to detect invalid attempts but they will not prevent attempts.

#### **NEW QUESTION 440**

Security monitoring mechanisms should PRIMARILY:

- A. focus on business-critical informatio
- B. assist owners to manage control risk
- C. focus on detecting network intrusion
- D. record all security violation

**Answer:** A

**Explanation:**

Security monitoring must focus on business-critical information to remain effectively usable by and credible to business users. Control risk is the possibility that controls would not detect an incident or error condition, and therefore is not a correct answer because monitoring would not directly assist in managing this risk. Network intrusions are not the only focus of monitoring mechanisms; although they should record all security violations, this is not the primary objective.

#### **NEW QUESTION 442**

Which of the following is the MOST important reason why information security objectives should be defined?

- A. Tool for measuring effectiveness
- B. General understanding of goals
- C. Consistency with applicable standards
- D. Management sign-off and support initiatives

**Answer:** A

**Explanation:**

The creation of objectives can be used in part as a source of measurement of the effectiveness of information security management, which feeds into the overall governance. General understanding of goals and consistency with applicable standards are useful, but are not the primary reasons for having clearly defined objectives. Gaining management understanding is important, but by itself will not provide the structure for governance.

#### **NEW QUESTION 444**

Which of the following is MOST effective in preventing weaknesses from being introduced into existing production systems?

- A. Patch management
- B. Change management
- C. Security baselines
- D. Virus detection

**Answer:** B

**Explanation:**

Change management controls the process of introducing changes to systems. This is often the point at which a weakness will be introduced. Patch management involves the correction of software weaknesses and would necessarily follow change management procedures. Security baselines provide minimum recommended settings and do not prevent introduction of control weaknesses. Virus detection is an effective tool but primarily focuses on malicious code from external sources, and only for those applications that are online.

#### **NEW QUESTION 445**

The effectiveness of virus detection software is MOST dependent on which of the following?

- A. Packet filtering
- B. Intrusion detection
- C. Software upgrades
- D. Definition tables

**Answer:** D

**Explanation:**

The effectiveness of virus detection software depends on virus signatures which are stored in virus definition tables. Software upgrades are related to the periodic updating of the program code, which would not be as critical. Intrusion detection and packet filtering do not focus on virus detection.

**NEW QUESTION 448**

Which of the following ensures that newly identified security weaknesses in an operating system are mitigated in a timely fashion?

- A. Patch management
- B. Change management
- C. Security baselines
- D. Acquisition management

**Answer:** A

**Explanation:**

Patch management involves the correction of software weaknesses and helps ensure that newly identified exploits are mitigated in a timely fashion. Change management controls the process of introducing changes to systems. Security baselines provide minimum recommended settings. Acquisition management controls the purchasing process.

**NEW QUESTION 453**

What is the BEST defense against a Structured Query Language (SQL) injection attack?

- A. Regularly updated signature files
- B. A properly configured firewall
- C. An intrusion detection system
- D. Strict controls on input fields

**Answer:** D

**Explanation:**

Structured Query Language (SQL) injection involves the typing of programming command statements within a data entry field on a web page, usually with the intent of fooling the application into thinking that a valid password has been entered in the password entry field. The best defense against such an attack is to have strict edits on what can be typed into a data input field so that programming commands will be rejected. Code reviews should also be conducted to ensure that such edits are in place and that there are no inherent weaknesses in the way the code is written; software is available to test for such weaknesses. All other choices would fail to prevent such an attack.

**NEW QUESTION 457**

Which of the following is MOST effective in preventing security weaknesses in operating systems?

- A. Patch management
- B. Change management
- C. Security baselines
- D. Configuration management

**Answer:** A

**Explanation:**

Patch management corrects discovered weaknesses by applying a correction (a patch) to the original program code. Change management controls the process of introducing changes to systems. Security baselines provide minimum recommended settings. Configuration management controls the updates to the production environment.

**NEW QUESTION 462**

The advantage of Virtual Private Network (VPN) tunneling for remote users is that it:

- A. helps ensure that communications are secure
- B. increases security between multi-tier system
- C. allows passwords to be changed less frequently
- D. eliminates the need for secondary authentication

**Answer:** A

**Explanation:**

Virtual Private Network (VPN) tunneling for remote users provides an encrypted link that helps ensure secure communications. It does not affect password change frequency, nor does it eliminate the need for secondary authentication or affect security within the internal network.

**NEW QUESTION 465**

When application-level security controlled by business process owners is found to be poorly managed, which of the following could BEST improve current practices?

- A. Centralizing security management
- B. Implementing sanctions for noncompliance
- C. Policy enforcement by IT management
- D. Periodic compliance reviews

**Answer:** A

**Explanation:**

By centralizing security management, the organization can ensure that security standards are applied to all systems equally and in line with established policy. Sanctions for noncompliance would not be the best way to correct poor management practices caused by work overloads or insufficient knowledge of security practices. Enforcement of policies is not solely the responsibility of IT management. Periodic compliance reviews would not correct the problems, by themselves, although reports to management would trigger corrective action such as centralizing security management.

## Thank You for Trying Our Product

\* 100% Pass or Money Back

All our products come with a 90-day Money Back Guarantee.

\* One year free update

You can enjoy free update one year. 24x7 online support.

\* Trusted by Millions

We currently serve more than 30,000,000 customers.

\* Shop Securely

All transactions are protected by VeriSign!

**100% Pass Your CISM Exam with Our Prep Materials Via below:**
