You need to ensure that the updated canvas app is available in the published Power BI report. What should you do?

A. Publish the Power BI report from Power BI Desktop.
B. Manually refresh the data source on the published Power BI report.
C. Publish the Power BI report from Power BI Desktop and reshare to any users.
D. Publish the canvas app.

Answer: B

Explanation:
- If you change the data fields associated with the visual, you must edit the app from within the Power BI service by selecting the ellipsis (...) and then selecting Edit. Otherwise, the changes won't be propagated
to Power Apps, and the app will behave in unexpected ways.
- The Power Apps visual can't trigger a refresh of Power BI reports and Power BI data sources from within Power BI Desktop. If you write back data from the app to the same data source as the report, your changes won't be reflected immediately in Power BI Desktop. Changes are reflected on the next scheduled refresh.

Select a managed solution and add the correct publisher.	
Add the table with all components to the solution.	
Choose an existing publisher.	
Add the table to the solution and add the new column.	
Run the solution checker on the solution.	

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Step 1: Create a new publisher Solution publisher
Every app and other solution components such as entities you create or any customization you make is part of a solution. Because every solution has a publisher, you should create your own publisher rather than use the default. You specify the publisher when you create a solution.
Step 2: Create a new unmanaged solution and select the correct publisher unmanaged solution
Unmanaged solutions are used in development environments while you make changes to your application. Unmanaged solutions can be exported either as unmanaged or managed. Exported unmanaged versions of your solutions should be checked into your source control system. Unmanaged solutions should be considered your source for Microsoft Power Platform assets. When an unmanaged solution is deleted, only the solution container of any customizations included in it is deleted. All the unmanaged customizations remain in effect and belong to the default solution.
Step 3: Add the table top the solution and add the new column. Step 4: Run the solution checker on the solution
Use solution checker to validate your model-driven apps in Power Apps.

NEW QUESTION 50

You are embedding a Power Apps visual in a Power BI dashboard. External customers must authenticate to have access to the dashboard. You need to configure the solution.
Which two actions should you perform? Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point.

A. Set the Power BI service to authenticate users.
B. Use a table in the Power BI dashboard.
C. Publish to Power BI Report Server.
D. Set the Power BI service to allow anonymous access.
E. Share the Power Apps visual components with external users.

Answer: AE

Explanation:
Power BI uses Azure Active Directory (AAD) to authenticate users who sign in to the Power BI service, and in turn, uses the Power BI login credentials whenever a user attempts to access resources that require authentication. Users sign in to the Power BI service using the email address used to establish their Power BI account; Power BI uses that login email as the effective username, which is passed to resources whenever a user attempts to connect to data. The effective username is then mapped to a User Principal Name (UPN) and resolved to the associated Windows domain account, against which authentication is applied.
