- B. unlimited failure reports for either a work order or any of its tasks
- C. unlimited failure reports for each work order, but none for a task

**Answer: D**

#### Explanation:

<https://maximosecrets.com/2022/04/14/failure-codes-and-failure-reporting/> In IBM Maximo, only one failure report can be created per work order. This failure report captures details about the issues encountered, including the failure class, problem, cause, and remedy codes. It is recorded in the Failure Reporting tab within the Work Order Tracking or Quick Reporting applications, and is designed to provide a structured report on the failure encountered for the specified work order.

While Maximo allows for multiple failure details to be reported across different work orders, each individual work order is limited to a single failure report. Tasks or child work orders associated with the main work order do not support additional, separate failure reports for each task; instead, the primary work order holds the single comprehensive report.

What is the priority order for selecting a Safety Plan when a Job Plan is applied to a Work Order?

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

In IBM Maximo Manage v8.0 implementation, the priority order for selecting a Safety Plan when a Job Plan is applied to a Work Order is:

- ? Use the Safety Plan associated with the Asset referenced on the Work Order.
- ? Use the Safety Plan associated with the Location referenced on the Work Order.
- ? Use the Safety Plan associated with the Asset's Rotating Item, for the Asset referenced on the Work Order.
- ? Use the Safety Plan associated with the Location's Rotating Item, for the Location referenced on the Work Order.

This ensures that the appropriate Safety Plan is applied to the Work Order based on the relevant Asset and Location information. If a Safety Plan is not associated with either the Asset or Location referenced on the Work Order, the Safety Plan associated with the Asset's Rotating Item or the Location's Rotating Item may be used as a fallback option. This helps to ensure that worker safety is prioritized and that appropriate precautions are taken when performing work tasks.

? Object Launch Point: Triggers on events related to specific objects (MBOs), such as creation, modification, or deletion

? Attribute Launch Point: Triggers when specific attributes within an MBO are accessed or modified

? Action Launch Point: Executes custom actions, often triggered by workflows or escalations, allowing for automation without custom Java code

? Condition Launch Point: Activates when a defined condition is met, commonly used for security or workflow condition logic
