

Microsoft

Exam Questions AB-731

AI Transformation Leader (beta)

NEW QUESTION 1

HOTSPOT

- For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Microsoft 365 Copilot enables users to search across emails, files, chats, meetings, and connected apps, by using natural language queries.	<input type="radio"/>	<input type="radio"/>
Microsoft 365 Copilot provides data protection, and helps ensure that user prompts and chat data are secure.	<input type="radio"/>	<input type="radio"/>
Microsoft 365 Copilot is included in all Microsoft 365 subscriptions.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
Microsoft 365 Copilot enables users to search across emails, files, chats, meetings, and connected apps, by using natural language queries.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft 365 Copilot provides data protection, and helps ensure that user prompts and chat data are secure.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft 365 Copilot is included in all Microsoft 365 subscriptions.	<input type="radio"/>	<input checked="" type="radio"/>

NEW QUESTION 2

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
A generative AI solution is well-suited to predict next-quarter sales trends.	<input type="radio"/>	<input type="radio"/>
A generative AI solution can summarize lengthy policy documents.	<input type="radio"/>	<input type="radio"/>
A generative AI solution can create product descriptions from product specifications.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
A generative AI solution is well-suited to predict next-quarter sales trends.	<input type="radio"/>	<input checked="" type="radio"/>
A generative AI solution can summarize lengthy policy documents.	<input checked="" type="radio"/>	<input type="radio"/>
A generative AI solution can create product descriptions from product specifications.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION 3

HOTSPOT

HOTSPOT - Select the answer that correctly completes the sentence. Microsoft 365 Copilot can be used to .

Answer Area

Microsoft 365 Copilot can be used to

monitor network traffic and alerts in real time.

create a Microsoft Word document.

create a list in Microsoft SharePoint.

modify administrative permissions for Microsoft SharePoint files.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Microsoft 365 Copilot can be used to

monitor network traffic and alerts in real time.

create a Microsoft Word document.

create a list in Microsoft SharePoint.

modify administrative permissions for Microsoft SharePoint files.

NEW QUESTION 4

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Microsoft Foundry helps organizations securely build and manage generative AI solutions in a governed environment.	<input type="radio"/>	<input type="radio"/>
Microsoft Foundry provides built-in scalability to enable organizations to expand AI workloads as usage increases.	<input type="radio"/>	<input type="radio"/>
Microsoft Foundry can be used for image recognition and computer vision tasks.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
Microsoft Foundry helps organizations securely build and manage generative AI solutions in a governed environment.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft Foundry provides built-in scalability to enable organizations to expand AI workloads as usage increases.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft Foundry can be used for image recognition and computer vision tasks.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION 5

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Microsoft Foundry provides a unified platform for developers and data professionals to create custom end-to-end AI solutions.	<input type="radio"/>	<input type="radio"/>
Microsoft Foundry provides a unified platform for low-code developers and business users to create custom end-to-end AI solutions.	<input type="radio"/>	<input type="radio"/>
You need a Microsoft 365 Copilot license to access Microsoft Foundry services.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
Microsoft Foundry provides a unified platform for developers and data professionals to create custom end-to-end AI solutions.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft Foundry provides a unified platform for low-code developers and business users to create custom end-to-end AI solutions.	<input type="radio"/>	<input checked="" type="radio"/>
You need a Microsoft 365 Copilot license to access Microsoft Foundry services.	<input type="radio"/>	<input checked="" type="radio"/>

NEW QUESTION 6

Your company sells hiking and camping gear online. You need a generative AI solution that can interact with customers and ask questions about their needs. What should you include in the solution?

- A. a chatbot
- B. predictive AI
- C. computer vision
- D. a recommendation engine

Answer: A

NEW QUESTION 7

HOTSPOT

- For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Prompt engineering changes how a generative AI model was trained.	<input type="radio"/>	<input type="radio"/>
Prompt engineering focuses on designing clear, concise, and context-rich instructions.	<input type="radio"/>	<input type="radio"/>
Effective prompt engineering involves maximizing the number of tokens used in each request.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
Prompt engineering changes how a generative AI model was trained.	<input type="radio"/>	<input checked="" type="radio"/>
Prompt engineering focuses on designing clear, concise, and context-rich instructions.	<input checked="" type="radio"/>	<input type="radio"/>
Effective prompt engineering involves maximizing the number of tokens used in each request.	<input type="radio"/>	<input checked="" type="radio"/>

NEW QUESTION 8

Your company creates a custom Azure Machine Learning model that uses a generative AI assistant. The model initially delivers strong results. However, six months later, the model predictions become noticeably less accurate. What is a possible cause of the issue?

- A. The input data changed over time.
- B. The model requires additional compute resources.
- C. The model was trained incorrectly.

Answer: A

NEW QUESTION 9

HOTSPOT

- For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Azure Vision in Foundry Tools can extract and analyze key phrases from PDF files.	<input type="radio"/>	<input type="radio"/>
Azure Vision in Foundry Tools can generate images based on natural language descriptions.	<input type="radio"/>	<input type="radio"/>
Azure Document Intelligence in Foundry Tools can be used to automate the processing of invoices and credit notes.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Azure Vision in Foundry Tools can extract and analyze key phrases from PDF files. Answer: No

Azure Vision in Foundry Tools can generate images based on natural language descriptions. Answer: No

Azure Document Intelligence in Foundry Tools can be used to automate the processing of invoices and credit notes. Answer: Yes

No— Azure Vision in Foundry Tools focuses on computer vision tasks such as image analysis and OCR (reading text from images and documents). While it can extract text from scanned PDFs via OCR, key phrase extraction is a natural language processing capability provided by Azure Language in Foundry Tools, not Azure Vision. Key phrase extraction analyzes text to identify main concepts, which is a different service family than vision.

No— Azure Vision can analyze existing images (for example, generate captions/descriptions of an image), but generating new images from a text prompt is a generative model capability (for example, DALL-E through Azure OpenAI/Azure AI Foundry model endpoints), not an Azure Vision feature. Vision describes what it sees; it doesn't synthesize new images from natural language.

Yes— Azure Document Intelligence in Foundry Tools is designed for intelligent document processing, including automating extraction of structured fields from financial documents. Microsoft provides prebuilt models for invoices and supports custom extraction for similar document types, which makes it suitable for automating workflows involving invoices and credit-note style documents (field extraction, validation, routing).

NEW QUESTION 10

You have a business unit that uses an AI solution to process loan applications. You discover that the solution rejects the application of all applicants that are older than 60 years of age. Which Microsoft responsible AI principle is this violating?

- A. accountability
- B. transparency
- C. fairness
- D. reliability and safety

Answer: C

NEW QUESTION 10

Your company manages an online catalog of office supplies. You plan to use a generative AI solution to create product descriptions for your company's website. The solution must ensure descriptions can be posted immediately after creation, enable selection/inclusion of product details, and be fast and simple for non-technical staff. What is the best type of solution to use? Select the BEST answer.

- A. custom Azure Machine Learning model
- B. the Researcher agent in Microsoft 365 Copilot
- C. an interactive AI agent
- D. a fine-tuned large language model LLM

Answer: D

NEW QUESTION 12

HOTSPOT

- What should you use for each task? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Extracting structured data from forms and invoices:

▼

- Azure Language in Foundry Tools
- Azure Document Intelligence in Foundry Tools
- Azure Vision in Foundry Tools

Summarizing written content from business reports:

▼

- Azure Language in Foundry Tools
- Azure Document Intelligence in Foundry Tools
- Azure Vision in Foundry Tools

Generating descriptive text for uploaded images:

▼

- Azure Language in Foundry Tools
- Azure Document Intelligence in Foundry Tools
- Azure Vision in Foundry Tools

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Extracting structured data from forms and invoices: Answer: Azure Document Intelligence in Foundry Tools

Summarizing written content from business reports: Answer: Azure Language in Foundry Tools

Generating descriptive text for uploaded images: Answer: Azure Vision in Foundry Tools

These three tasks align to three different Azure AI capability families: document processing, language understanding/generation, and computer vision.

Forms and invoices are semi-structured documents where the business need is to extract specific fields (IDs, names, totals, dates) reliably into structured output. Azure Document Intelligence is designed for intelligent document processing and includes prebuilt models (such as invoices) as well as custom extraction options, making it the correct choice for structured data extraction from documents.

Summarizing written business reports is an NLP task focused on compressing long text into key points, themes, and action items. Azure Language provides language processing capabilities (including summarization features within language service capabilities), so it is the best fit for summarization scenarios.

Generating descriptive text for images (image captioning/description) is a computer vision task. Azure Vision can analyze uploaded images and return descriptions/captions and other visual insights, which directly matches the requirement to produce descriptive text from images.

NEW QUESTION 14

Your company plans to use generative AI to help build a website that will showcase various existing products. Which capability best describes a benefit of using generative AI for this project? Select the BEST answer.

- A. translating product descriptions into a different language
- B. analyzing product sales to identify patterns and trends
- C. designing a new product based on customer requirements
- D. creating product descriptions based on product specifications

Answer: D

NEW QUESTION 16

HOTSPOT

- For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Using incomplete or poor-quality data during generative AI model training can increase costs.	<input type="radio"/>	<input type="radio"/>
AI models rely on training data to learn patterns and identify relationships to produce outputs.	<input type="radio"/>	<input type="radio"/>
Generative AI models trained on non-representative datasets can produce inaccurate or unbalanced results.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
Using incomplete or poor-quality data during generative AI model training can increase costs.	<input checked="" type="radio"/>	<input type="radio"/>
AI models rely on training data to learn patterns and identify relationships to produce outputs.	<input checked="" type="radio"/>	<input type="radio"/>
Generative AI models trained on non-representative datasets can produce inaccurate or unbalanced results.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION 19

Your company uses a non-reasoning generative AI model to create textual content. You discover that the model's responses are inconsistent and do NOT meet expectations. You need to improve the prompts. What should you do? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Provide the prompts with extensive examples of the expected output.
- B. Add the context, sources, and expectations to the prompts.
- C. Use technical terms in the prompts to enhance AI comprehension.
- D. Add only a single concise requirement to the prompts.

Answer: AB

NEW QUESTION 20

Which business requirement most closely relates to grounding a generative AI model?

- A. supporting multiple languages
- B. measuring the number of user interactions per day
- C. enabling users to interact by using natural language queries
- D. ensuring that verified company data sources are used for response generation

Answer: D

NEW QUESTION 24

Your company discovers that several employees use personal ChatGPT accounts to assist with work tasks. You are concerned about proprietary data being shared externally. You need to evaluate the business value of rolling out Microsoft 365 Copilot. Which capability is a key benefit of using Copilot instead of a personal ChatGPT account?

- A. analyzing and producing reports based on complex data
- B. generating ideas and solving issues
- C. drafting documents, emails, presentations, and marketing materials
- D. accessing internal data in accordance with existing Microsoft 365 policies

Answer: D

NEW QUESTION 26

HOTSPOT

- Select the answer that correctly completes the sentence.

An organization that runs continuous, large-scale workloads with Azure OpenAI models should choose the pricing model.

Answer Area

An organization that runs continuous, large-scale workloads with Azure OpenAI models should choose the  pricing model.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

An organization that runs continuous, large-scale workloads with Azure OpenAI models should choose the  pricing model.

NEW QUESTION 31

Your company has a Microsoft 365 subscription and uses Microsoft 365 Copilot Chat. Some users need to build and use declarative agents that can access work data. Which type of license should you recommend for the users?

- A. a Microsoft 365 Copilot add-on license
- B. Microsoft Copilot Studio user license
- C. a Copilot Chat pay-as-you-go plan

Answer: A

NEW QUESTION 32

HOTSPOT

- For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Answer Area

Statements	Yes	No
A generative AI model guarantees factually accurate responses if the model is trained on a large dataset.	<input type="radio"/>	<input type="radio"/>
Content filtering and responsible AI safeguards help a generative AI model generate safe and inoffensive content.	<input type="radio"/>	<input type="radio"/>
A generative AI model always produces fair and unbiased results when the training data has been properly prepared and reviewed for fairness.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
A generative AI model guarantees factually accurate responses if the model is trained on a large dataset.	<input type="radio"/>	<input checked="" type="radio"/>
Content filtering and responsible AI safeguards help a generative AI model generate safe and inoffensive content.	<input checked="" type="radio"/>	<input type="radio"/>
A generative AI model always produces fair and unbiased results when the training data has been properly prepared and reviewed for fairness.	<input type="radio"/>	<input checked="" type="radio"/>

NEW QUESTION 35

Your company manages a website that publishes daily news articles. You need to recommend an AI solution that can analyze text and identify the main people, locations, and companies mentioned in the articles. What should you include in the recommendation?

- A. Azure Language in Foundry Tools
- B. Content Safety in Foundry Control Plane
- C. Azure Vision in Foundry Tools
- D. Azure Speech in Foundry Tools

Answer: A

Explanation:

The requirement is to analyze text and identify people, locations, and companies mentioned in news articles. This is a classic Named Entity Recognition (NER)/entity extraction scenario, which falls under natural language processing. Azure Language in Foundry Tools is the correct choice because it provides text analytics capabilities that detect and categorize entities in unstructured text—commonly including Person, Location, and Organization. This enables downstream experiences such as topic tagging, search filters (e.g., all articles mentioning Company X), trend dashboards (top people/places mentioned this week), and improved content discovery.

The other options do not match the requirement. Content Safety focuses on moderating harmful or policy-violating content (for example, hate, violence, self-harm, sexual content) and is not the primary tool for extracting named entities. Azure Vision is for analyzing images and performing OCR; it would only be relevant if the articles were images or scans, but the task here is entity extraction from text articles. Azure Speech is for speech-to-text, text-to-speech, and audio analysis; it would be used if your input were audio recordings rather than written articles.

Therefore, to identify key entities (people, locations, companies) from daily news article text, the best recommendation is Azure Language in Foundry Tools.

NEW QUESTION 40

HOTSPOT

Select the answer that correctly completes the sentence.

When a generative AI model produces output that seems realistic but contains incorrect information, the behavior is known as .

Answer Area

When a generative AI model produces output that seems realistic but contains incorrect information, the behavior is known as

- data leakage.
- model inaccuracy.
- overreliance.
- prompt injection.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area

When a generative AI model produces output that seems realistic but contains incorrect information, the behavior is known as

- data leakage.
- model inaccuracy.
- overreliance.
- prompt injection.
