

Microsoft

Exam Questions 70-346

Managing Office 365 Identities and Requirements

NEW QUESTION 1

- (Exam Topic 1)

Contoso, Ltd. plans to use Office 365 for email services and Skype for Business Online. Contoso has four unique domain names.

You need to migrate domain names to Office 365.

Which two domain names should you exclude from the migration? Each correct answer presents part of the solution.

- A. contoso.us
- B. contoso
- C. contoso.local
- D. contoso.co

Answer: BC

Explanation:

There are no practical limits on the number of domains that can be verified to Office 365 Enterprise. The rules are simple: you need to verify a domain, and you need to assign the domain based on the needs (or Domain Intent). Domain Intent is what the domain services will be configured as; there are three different types of services for Domain Intent.

A top-level domain (TLD) is the part of the domain name located to the right of the dot (" . "). The most common TLDs are .com, .net, and .org. Some others are .biz, .info, and .ws. These common TLDs all have certain guidelines, but are generally available to any registrant, anywhere in the world.

B: contoso- single labeled domain / or also known as a second-level domain - not valid C: contoso.local - internal labeled domain - not valid

NEW QUESTION 2

- (Exam Topic 1)

A company plans to use Office 365 to provide email services for users. You need to ensure that a custom domain name is used.

What should you do first?

- A. Add the custom domain name to Office 365 and then verify it.
- B. Verify the existing domain name.
- C. Create an MX record in DNS.
- D. Create a CNAME record in DNS.

Answer: A

Explanation:

DNS actually tells the Internet where to send email to. Thus you need to make sure that your custom name that you intend using for email is added to Office 365 and verified. When you put the right information into the right DNS records for your domain, the DNS system routes everything correctly so your email, for example, arrives in Office 365 instead of somewhere else.

NEW QUESTION 3

- (Exam Topic 1)

A company has an Active Directory Domain Service (AD DS) domain. All servers run Windows Server 2008. You have an on-premises Exchange 2010 server.

The company plans to migrate to Office 365.

In the table below, identify the required action for each phase of the pilot. Make only one selection in each column. Each correct selection is worth one point.

Planning Phase	Migration Phase	Project Action
<input type="radio"/>	<input type="radio"/>	Assign licenses to users.
<input type="radio"/>	<input type="radio"/>	Prepare the on-premises Active Directory for directory synchronization.
<input type="radio"/>	<input type="radio"/>	Raise the forest functional level to Windows Server 2008.
<input type="radio"/>	<input type="radio"/>	Upgrade the Exchange server to Exchange 2013.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

During migration which first step is to have the domain validated, the step that follows is to add users and assign licenses. Microsoft found that it is better to complete the domain configuration (with the exception of changing the MX records) and add users after the domain has been defined when migrating to Office 365.

Planning for the migration involves preparation to synchronize the Active Directory. References:

<https://msdn.microsoft.com/library/azure/jj151831.aspx>

NEW QUESTION 4

- (Exam Topic 1)

Fabrikam has the Office 365 Enterprise E3 plan.

You must add the domain name fabrikam.com to the Office 365 tenant. You need to confirm ownership of the domain.

Which DNS record types should you use? To answer, drag the appropriate DNS record type to the correct location or locations in the answer area. Each DNS record type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

CNAME

A

TXT

SRV

MX

Answer Area

Verification Method	DNS Record Type
Preferred	<div></div>
Alternate	<div></div>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

TXT record is used for verification. When you have added the record at your domain registrar's site, you'll go back to Office 365 and request Office 365 to look for the record. When Office 365 finds the correct TXT record, your domain is verified.
MX (mail exchanger) record points to where your email should be sent. It also has a priority field so that you can send mail to different servers in a priority order.

NEW QUESTION 5

- (Exam Topic 1)
Your company purchases an Office 365 plan. The company has an Active Directory Domain Services domain. User1 must to manage Office 365 delegation for the company.
You need to ensure that User1 can assign administrative roles to other users. What should you do?

- A. Create an Office 365 tenant and assign User1 the password administrator role.
- B. Use a password administrator account to assign the role to User1.
- C. Use a user management administrator account to assign the role to User1.
- D. Create an Office 365 tenant and assign User1 the global administrator role.

Answer: D

Explanation:

The Global Administrator account is similar to the Company administrator. Users in this role have access to everything or the permission to add them to a dedicated role where they do not have permission (such as discovery management and assigning administrative roles to other users).
References:
<https://support.office.com/client/Assigning-admin-roles-eac4d046-1afd-4f1a-85fc-8219c79e1504>

NEW QUESTION 6

- (Exam Topic 2)
You are the Office 365 administrator for your company.
You need to ensure that trusted applications can decrypt rights-protected content.
Which four Windows PowerShell cmdlets should you run in sequence? To answer, move the appropriate cmdlets from the list of cmdlets to the answer area and arrange them in the correct order.

Import-Module AADRM

Add-AadrmRoleBasedAdministrator

Enable-AadrmSuperUserFeature

Set-AadrmMigrationUrl

Enable-Aadrm

Connect-AadrmService

Answer Area

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

Microsoft Azure Rights Management (previously known as Windows Azure Active Directory Rights Management). To be able to decrypt rights protected documents you need to make sure that Microsoft Azure Rights Management is set up. Also you will need to enable a SuperUser account because The Active Directory Rights Management Services (AD RMS) super users group is a special group that has full control over all rights-protected content managed by the cluster. Its members are granted full owner rights in all use licenses that are issued by the AD RMS cluster on which the super users group is configured. This means that members of this group can decrypt any rights-protected content file and remove rights-protection from it.

The super users group is not enabled and is not assigned a group by default. This can be done by running the appropriate commands in sequence which are:
References:

<https://technet.microsoft.com/en-us/library/dn569291.aspx> <https://technet.microsoft.com/en-us/library/dn151475%28v=exchg.150%29.aspx>

NEW QUESTION 7

- (Exam Topic 2)

A company deploys an Office 365 tenant. All employees use Skype for Business Online. You need to configure the network firewall to support Skype for Business Online.

Which ports must you open? To answer, drag the appropriate port number to the correct feature or features. Each port number may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

443

3478

5223

80

389

Answer Area

Online Feature	Firewall Port
Audio, video, and application sharing sessions	
Skype mobile push notifications	

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

Transport Control Protocol(TCP), User Datagram Protocol(UDP) ports, and Protocol Numbers are important to TCP/IP networking, intranets, and the Internet. Ports and protocol numbers provide access to a host computer. However, they also create a security hazard by allowing uninvited access. Therefore, knowing which port to allow or disable increases a network's security. If the wrong ports or protocol numbers are disabled on a firewall, router, or proxy server as a security measure, essential services might become unavailable.

Port 443 is used for Audio, video and application sharing sessions as well as data sharing sessions - For HTTPS.

Port 5223 is used for mobile push notifications - Extensible Messaging and Presence Protocol (XMPP) client connection over SSL.

NEW QUESTION 8

- (Exam Topic 2)

You create an Office 365 tenant. You assign administrative roles to other users. You hire a new user named User2. User2 must NOT be able to change passwords for other users. You need to assign an administrative role to User2.

Which role should you assign?

- A. Service administrator
- B. Global administrator
- C. Delegate administrator
- D. Password administrator

Answer: A

Explanation:

Being the Service Administrator will allow User2 to manage service requests and monitor service health, while not allowing User2 to have the ability to change passwords for other users.

NEW QUESTION 9

- (Exam Topic 2)

A company deploys an Office 365 tenant. You assign the roles to users as shown in the following table:

User	Role Assigned
User1	global administrator
User2	user management administrator
User3	no roles are assigned to User3

User3 must be able to monitor the health of the Exchange Online service. You must use the principle of least privilege to assign permissions to User3. You need to assign permissions to User3.

Which three actions should you perform? Each correct answer presents part of the solution.

- A. Assign User3 the service administrator role in Office 365.
- B. Sign in to the Office 365 portal as User1.
- C. Sign in to the Office 365 portal as User2.
- D. Grant User3 administrative permissions in Exchange Online.
- E. Assign User3 the global administrator role in Office 365.

Answer: ABD

Explanation:

A: User3 must be the Service administrator role because that role allows for managing service requests and monitoring service health.

B: User1 has the global administrator role assigned. Only the global administrator can delegate service administrator role. This means that you should sign in with the User1 account for that will allow you to assign other admin roles.

D: If User3 is to monitor the health of the Exchange Online service he/she will require the appropriate administrative permissions.

References:

<http://technet.microsoft.com/en-us/library/hh852528.aspx>

NEW QUESTION 10

- (Exam Topic 3)

A company deploys an Office 365 tenant.

You need to enable multi-factor authentication for Office 365.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer Area

Enable multi-factor authentication for all user accounts.

Instruct users to use a mobile phone to complete the registration process.

Create a multi-factor authentication provider with the Per Enabled User usage model.

Create a multi-factor authentication provider with the Per Authentication usage model.

Instruct users to obtain a single-use password to complete the registration process.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: Create a multi-factor authentication provider with the Per Enabled User usage model. Box 2: Enable multi-factor authentication for all user accounts.

Box 3: Instruct users to use a mobile phone to complete the registration process. Adding Multi-Factor Authentication to Azure Active Directory (for Office 365

users) Step 1: First we create the usage model of the MFA provider.
 We should use PerEnabled User which is used for Office 365. Note:

- ▶ Per Authentication – purchasing model that charges per authentication. Typically used for scenarios that use the Azure Multi-Factor Authentication in an application.
- ▶ Per Enabled User – purchasing model that charges per enabled user. Typically used for scenarios such as Office 365.

Step 2: Enable Multi-Factor Authentication for all your user accounts. You need to enable multi-factor authentication on your Office 365 users. Step 3: Have a user sign-in and complete the registration process.

The users can use their mobile phones to complete the auto-enrollment process.

Details: After being enrolled for multi-factor authentication, the next time a user signs in, they see a message asking them to set up their second authentication factor. Using the enrollment process the users will be able to specify your preferred method of verification.

The following methods exist: Mobile Phone Call, Mobile Phone Text Message, Office Phone Call, or Mobile App.

References:

<https://github.com/MicrosoftDocs/azure-docs/blob/master/articles/multi-factor-authentication/multi-factor-authentication-overview.md>

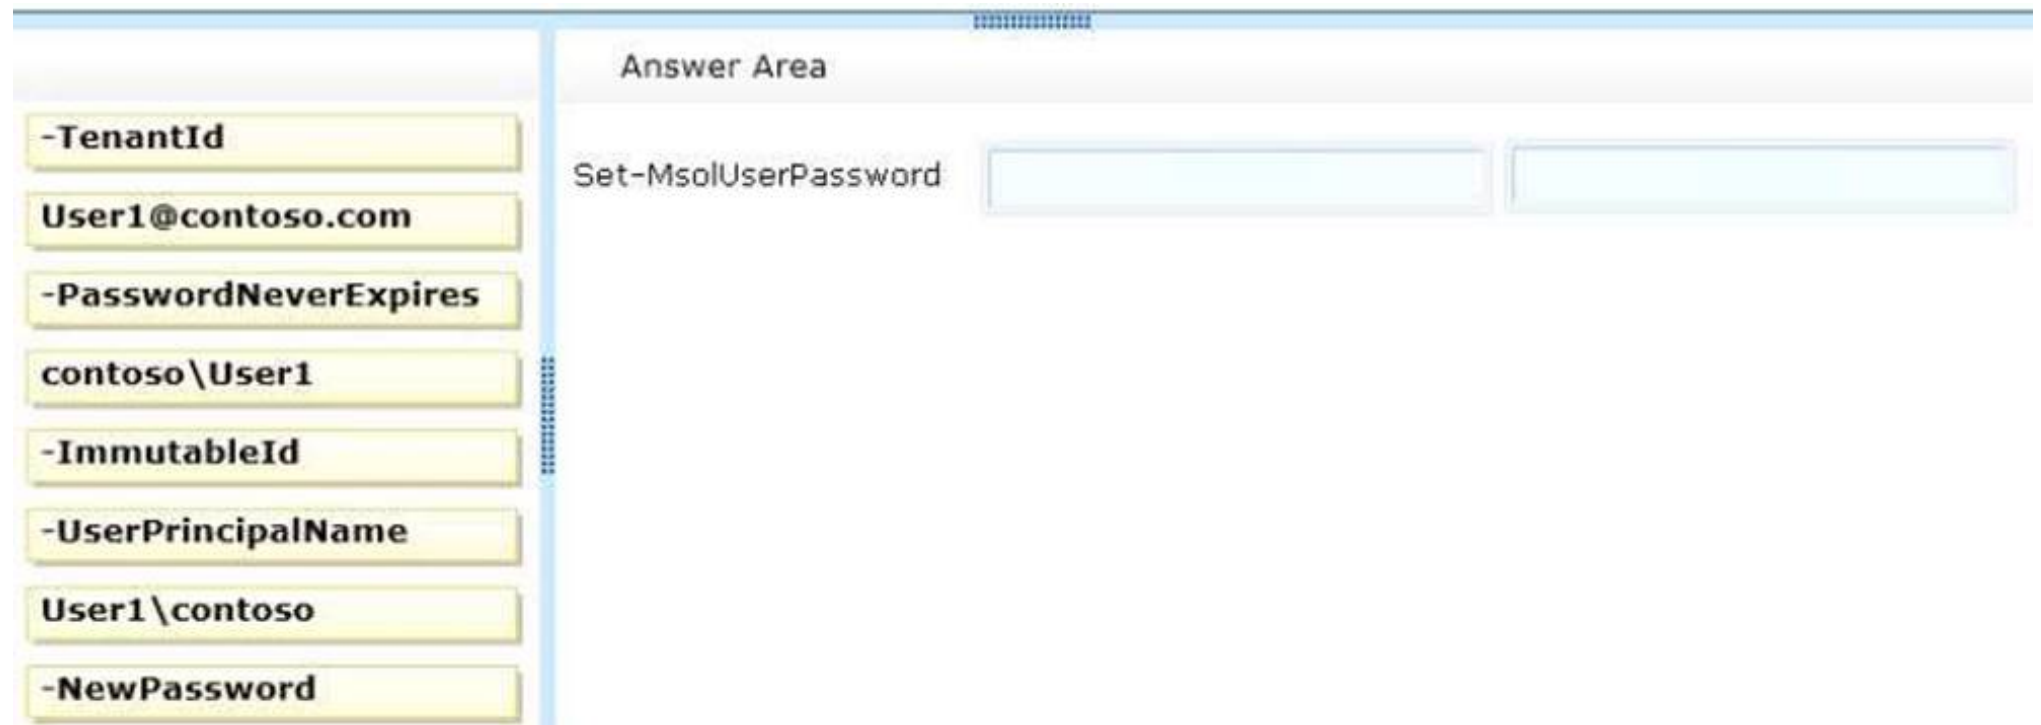

NEW QUESTION 10

- (Exam Topic 3)

You are the Office 365 administrator for Contoso, Ltd. User1 is unable to sign in.

You need to change the password for User1 and ensure that the user is prompted to reset her password the next time she signs in.

How should you complete the relevant Windows PowerShell command? To answer, drag the appropriate Windows PowerShell segments to the correct location or locations. Each Windows PowerShell segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The Set-MsolUserPassword cmdlet is used to change the password of a user.

The parameter -UserPrincipalName is used to specify the user to set the password for.

The following command resets the password for user@contoso.com. A random password will be generated. The user will be required to reset the password on next sign in.

Set-MsolUserPassword -UserPrincipalName user@contoso.com

NEW QUESTION 15

- (Exam Topic 3)

You use a centralized identity management system as a source of authority for user account information. You export a list of new user accounts to a file on a daily basis. Your company uses a local Active Directory for storing user accounts for on-premises solutions. You are configuring the Windows Azure Active Directory Sync tool.

New user accounts must be created in both the local Active Directory and Office 365. You must import user account data into Office 365 daily.

You need to import the new users. What should you do?

- A. Use the Office 365 admin center to import the file.
- B. Create a Windows PowerShell script to import account data from the file into Active Directory.
- C. Use the Windows Azure Management Portal to import the file.
- D. Create a Windows PowerShell script that uses the MSOnline module to import account data from the file.

Answer: B

Explanation:

To force a sync with the Windows Azure Active Directory Sync tool:

- ▶ Open Powershell (as admin)
- ▶ Type Import-Module DirSync
- ▶ Then Type Start-OnlineCoExistenceSync

To simplify further you can write the commands as a PowerShell script.

NEW QUESTION 20

- (Exam Topic 3)

You have an Office 365 environment. Synchronization between the on-premises Active Directory and Office 365 is enabled. You need to deactivate directory synchronization. Which Windows PowerShell cmdlet should you run?

- A. Update-MsolFederatedDomain
- B. Remove-MsolDomain
- C. Remove-MsolFederatedDomain
- D. Set-MsolDirSyncEnabled

Answer: D

Explanation:

The Set-MsolDirSyncEnabled cmdlet is used to enable or disable directory synchronization for a company. The complete command to disable directory Sync is Set-MsolDirSyncEnabled –EnableDirSync \$false

References:

<http://support.microsoft.com/kb/2619062>

NEW QUESTION 23

- (Exam Topic 3)

You are the Office 365 administrator for your company. The company has Office 365 Enterprise E3 licenses for each of its 250 employees. The company does not allow email or Skype for Business Online licenses to be assigned to external contractors.

User1 is an external contractor who requires access to SharePoint and Office Web Apps only. You need to add a license for User1's account.

What should you do? To answer, drag the appropriate action to the correct location or locations. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Select the purchase services option.

Select the licensing option.

Select the users and groups option.

Enable External Users in SharePoint.

Add an Office 365 Enterprise E3 license for User1.

Answer Area

Step	Action
1.	Sign in to the Office 365 admin center.
2.	
3.	Add an Office Web App with SharePoint (Plan 1) plan.
4.	
5.	Assign licenses to User1.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Step	Action
1.	Sign in to the Office 365 admin center.
2.	Select the purchase services option.
3.	Add an Office Web App with SharePoint (Plan 1) plan.
4.	Select the users and groups option.
5.	Assign licenses to User1.

NEW QUESTION 28

- (Exam Topic 3)

You are the Office 365 administrator for your company. The company uses Active Directory Federation Services (AD FS) to provide single sign-on to cloud-based services. You enable multi-factor authentication.

Users must NOT be required to use multi-factor authentication when they sign in from the company's main office location. However, users must be required to verify their identity with a password and token when they access resources from remote locations. You need to configure the environment. What should you do?

- A. Disable AD FS multi-factor authentication.
- B. Configure an IP blacklist for the main office location.
- C. Disable the AD FS proxy.
- D. Configure an IP whitelist for the main office location.

Answer: D

Explanation:

With ADFS you now get the option to whitelist an IP for multi-factor authentication (MFA).

For example, if you enable multi-factor authentication. Users must NOT be required to use multi-factor authentication when they sign in from the company's main office location. However, users must be required to verify their identity with a password and token when they access resources from remote locations.

References:

<https://msdn.microsoft.com/en-us/library/azure/dn807156.aspx>

NEW QUESTION 30

- (Exam Topic 3)

You plan to deploy an Office 365 tenant to multiple offices around the country.

You need to modify the users and groups who are authorized to administer the Rights Management service. Which Windows PowerShell cmdlet should you run?

- A. Add-MsolGroupMember
- B. Get-Add rm Role Based Administrator
- C. Remove-AadrmRoleBasedAdministrator
- D. Enable AadrmSuperUserFeature

Answer: D

Explanation:

The Enable-AadrmSuperUserFeature cmdlet enables the super user feature. With this feature enabled, you can add or remove super users for Azure Rights Management. By default, the super users feature is not enabled, and no users are assigned to this feature. By enabling this feature we can modify the users and groups that are able to administer the Rights Management service.

References:

<https://docs.microsoft.com/en-us/powershell/module/aadrm/enable-aadrmsuperuserfeature?view=azureipps>

NEW QUESTION 32

- (Exam Topic 3)

Your company has a hybrid deployment of Office 365. You need to verify whether free/busy information sharing with external users is configured.

Which Windows PowerShell cmdlet should you use?

- A. Test-OutlookConnectivity
- B. Test-FederationTrust
- C. Get-OrganizationRelationship
- D. Get-MSOLDomainFederationSettings

Answer: C

Explanation:

How to troubleshoot free/busy issues in a hybrid deployment of on-premises ExchangeServer and Exchange Online in Office 365

Use the Get-OrganizationRelationship cmdlet to retrieve settings for an organization relationship that has been created for federated sharing with other federated Exchange organizations or for hybrid deployments with ExchangeOnline. You can use this information to troubleshoot free/busy issues in a hybrid deployment.

In more detail (see step 4 below):

To help troubleshoot this issue, follow these steps:

▶ On an on-premises computer that's running Microsoft Exchange 2010 Server Service Pack 1 (SP1), click Start, click All Programs, click Microsoft Exchange Server 2010, and then click Exchange Management Shell.

▶ At the command line, type the following command, and then press Enter: Get-FederationInformation -domainname <Office 365Domain>In this command, the <Office 365 Domain> placeholder represents the default Office 365 domain (for example, adatum.onmicrosoft.com).

▶ In the results, note the TargetApplicationUri and TargetAutodiscoverEpr values. These are the sett that the target domain must have to make sure that the federation trust is set up correctly.

▶ To display the trust information that is currently set up for the default Office 365 domain, run the following command: Get-OrganizationRelationship | FL

NEW QUESTION 37

- (Exam Topic 3)

Litware Inc. has an Office 365 Enterprise E1 plan. Employees have access to all Office 365 services. Employees in the human resources (HR) department must continue to use the on-premises SharePoint 2013 deployment due to legal requirements.

You need to disable access to SharePoint Online for all HR department employees.

How should you complete the relevant Windows PowerShell commands? To answer, drag the appropriate Windows PowerShell segment to the correct location or locations in the answer area. Each Windows PowerShell segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

- MsolUser
- MsolUserRole
- MSOnline
- MsolService
- MsolSubscription
- MsolUserLicense
- MsolLicenseOptions
- SHAREPOINTWAC
- SHAREPOINTSTANDARD

```

Import-Module MSOnline

$cred = Get-Credential

Connect-MsolService -cred $cred

$license = New 

    -AccountSkuId "litware:STANDARDPACK"

    -DisabledPlans 

Get  -All -Department "HR" |

Set  -LicenseOptions $license
    
```

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: -MsolLicenseOptions
 We must create license object. The New-MsolLicenseOptions cmdlet creates a new License Options object. Box 2: SHAREPOINTSTANDARD
 We must disable SharePoint Online. SharePoint Online is denoted by SHAREPOINTSTANDARD.
 The New-MsolLicenseOptions-DisabledPlans <string[]> produces a list of service plans to disable when assigning this license to the user.
 Box 3: We get all HR department users through the Get -MsolUser -All -Department "HR" command. The Get-MsolUser cmdlet can be used to retrieve an individual user, or list of users.
 Box 4: For these retrieved users we use the Set-MsolUserLicense command to apply the license we constructed.
 The Set-MsolUserLicense cmdlet can be used to adjust the licenses for a user.

NEW QUESTION 38

- (Exam Topic 3)
 Your company subscribes to an Office 365 Plan E3. A user named User1 installs Office Professional Plus for Office 365 on a client computer. From the Microsoft Online Services portal, you assign User1 an Office Professional Plus license. One month after installing Office, User1 can no longer save and edit Office documents on the client computer. User1 can open and view Office documents.
 You need to ensure that User1 can save and edit documents on the client computer by using office. What should you do?

- A. Install the Office Customization Tool.
- B. Reinstall Office Professional Plus.
- C. Install the Microsoft Online Services Sign-in Assistant.
- D. Upgrade the subscription to Plan E4.

Answer: C

Explanation:

Office 365 ProPlus is offered as a monthly subscription. The subscription for User1 has run out and the program has been deactivated. The user should choose Sign In to activate Office 365 ProPlus. This is done through the Microsoft Online Services Sign-in Assistant.
 References:
[http://technet.microsoft.com/en-us/library/gg702619\(v=office.15\).aspx](http://technet.microsoft.com/en-us/library/gg702619(v=office.15).aspx)

NEW QUESTION 41

- (Exam Topic 4)
 You are the Office 365 administrator for your company.
 User1 leaves the company. You must delete the account for User1.
 In the table below, identify when each type of data will be deleted. Make only one selection in each column. Each correct selection is worth one point.

User1 Exchange Online mailbox	Documents Created by User1 on SharePoint Online	Timeframe
<input type="radio"/>	<input type="radio"/>	Never removed
<input type="radio"/>	<input type="radio"/>	Removed immediately
<input type="radio"/>	<input type="radio"/>	Removed after 30-day grace period
<input type="radio"/>	<input type="radio"/>	Removed after 90-day grace period

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

References:

<https://support.office.com/en-us/article/Manage-SharePoint-Online-user-profiles-from-the-SharePoint-admin-ce>

NEW QUESTION 46

- (Exam Topic 4)

An organization plans to migrate to Office 365. You use the Windows Azure Active Directory (AD) Sync tool. Several users will not migrate to Office 365. You must exclude these users from synchronization. All users must continue to authenticate against the on-premises Active Directory.

You need to synchronize the remaining users.

Which three actions should you perform? Each correct answer presents part of the solution.

- A. Populate an attribute for each user account.
- B. Disable the user accounts in Active Directory.
- C. Perform a full synchronization.
- D. Configure the connection filter.
- E. Run the Windows PowerShell command `Set-MsolDirSyncEnabled -EnableDirSync $false`.

Answer: ACD

Explanation:

To implement user attribute-based Directory synchronization filtering you need to add an attribute to each user object that is to be filtered in your on-premises Active Directory. Then you need to enable Active Directory synchronization filtering and configure the connection filter to use the user attribute. Finally, you must perform a full synchronization.

NEW QUESTION 49

- (Exam Topic 5)

A company named Fabrikam, Inc. is deploying an Office 365 tenant. You install Active Directory Federation Services (AD FS) on a server that runs Windows Server 2012.

The company's environment is described in the following table:

Description	Fully Qualified Domain Name
Cluster DNS Name	fs.fabrikam.com
Server node in cluster	server1.fabrikam.com
Server node in cluster	server2.fabrikam.com

You must obtain a certificate from a certification authority and install it on the federation servers. You need to specify the subject name for the certificate. Which name should you specify?

- A. fs.fabrikam.com
- B. server1.fabrikam.com
- C. fabrikam.com
- D. server2.fabrikam.com

Answer: A

Explanation:

The Subject Name for the certificate must match the names used for AD FS. The cluster DNS name must match the Federation Service name. As the cluster DNS name is fs.fabnkam.com, we are using it for AD FS, and we must use it in the subject name for the certificate.

References:

<http://blogs.technet.com/b/askds/archive/2012/01/05/understanding-the-ad-fs-2-0-proxy.aspx>

NEW QUESTION 54

- (Exam Topic 5)

An organization has over 10,000 users and uses a SQL-based Active Directory Federation Services (AD FS) 2.1 server farm.

You need to change the AD FS 2.0 service account password.

What should you do? Select the correct answer from each list in the answer area.

Step	Action
1.	Log on to each <input type="text"/>
2.	Modify the application pool identity by using the <input type="text"/>
3.	Modify the AD FS Windows Service Properties by using the <input type="text"/>

Step	Action
1.	Log on to each <div> <div></div> <div> <div>directory sync server</div> <div>federation proxy server</div> <div>federation server</div> <div>workstation</div> </div> </div>
2.	Modify the application pool identity by using the <div> <div></div> <div> <div>AD FS management</div> <div>Internet Information Services (IIS) manager</div> <div>local security policy</div> <div>task scheduler</div> </div> </div>
3.	Modify the AD FS Windows Service Properties by using the <div> <div></div> <div> <div>Office 365 admin center</div> <div>System Configuration</div> <div>Windows Services MMC snap-in</div> </div> </div>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

We must update the domain password for the AD FS 2.0 service account in Active Directory Domain Services (AD DS) and then update the AD FS AppPool and the AD FS service account on all federation servers in the federation server farm to mirror the new domain password.
The AD FS AppPool is configured through Internet Information Services (IIS) Manager.
The AD FS 2.0 Windows Service Properties is configured through the Windows Services snap-in. References:
<https://technet.microsoft.com/en-us/library/hh344806%28v=ws.10%29.aspx>

NEW QUESTION 59

- (Exam Topic 5)

You are the Office 365 administrator for your company.
You must configure a trust between the on-premises Active Directory domain and the Office 365 environment by using Active Directory Federation Services.
You need to assign the correct certificate to the description of your on-premises server environment below. Which certificate types should you assign? To answer, drag the appropriate certificate type to the correct test description. Each certificate type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer Area	
Description	Certificate Type
Secures the communication between federation servers, clients, and federation server proxy computers.	<div></div>
Securely signs all tokens that the federation server issues for the cloud-based services.	<div></div>

Client

Domain

SSL

X.509

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Certificates are used to secure communications between federation servers, Web Application Proxies, federation server proxies, the cloud service, and web clients.
A Secure Sockets Layer (SSL) certificate is used to secure communications between federation servers, clients, Web Application Proxy, and federation server

proxy computers.

A Token-signing certificate is a standard X.509 certificate that is used to securely sign all tokens that the federation server issues and that the cloud service will accept and validate.

References:

<https://technet.microsoft.com/en-us/library/dn151311.aspx>

<http://blogs.technet.com/b/adfs/archive/2007/07/23/adfs-certificates-ssl-token-signing-and-client-authentication->

NEW QUESTION 60

- (Exam Topic 5)

Contoso Ltd. plans to use Office 365 services for collaboration between departments. Contoso has one Active Directory Domain Services domain named contoso.local. You deploy Azure AD Connect.

You plan to implement single sign-on (SSO) for Office 365.

You need to synchronize only the user accounts that have valid routable domain names and are members of specified departments.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Use user attribute-based filtering to exclude all users that have contoso.local in the userPrincipalName attribute.	<div><div></div><div></div><div></div><div></div><div></div><div></div></div>
Use the Active Directory Users and Computers MMC snap-in to change the user principal name (UPN) suffix to contoso.com for all Contoso users.	
Use the Active Directory Users and Computers MMC snap-in to change the user principal name (UPN) suffix to contoso.com for all users in the specified departments.	
Add the user principal name (UPN) suffix contoso.com to the domain contoso.local by using the Active Directory Users and Computers MMC snap-in.	
Add the user principal name (UPN) suffix contoso.com to the domain contoso.local by using the Active Directory Domain and Trusts MMC snap-in.	
Use domain-based filtering to exclude all users in the domain contoso.local.	

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The domain we want to federate must be registered as a public internet domain with a domain registrar or within our own public DNS servers. We cannot use contoso.local as it is not routable outside of the intranet. We can then use Active Directory Domains and Trusts to add user principal name (UPN) suffixes to the domain. The default UPN suffix is the Domain Name System (DNS) domain name of the contoso.local domain that contains the user account. We can add contoso.com as an alternative UPN suffixes for logon processes.

We should then use Active Directory Users and Computers to change the UPN of user accounts in the specified departments to contoso.com.

Finally, we can use user attribute-based filtering to exclude all have non-routable domain names, i.e., those that have a contoso.local as their UPN suffix.

NEW QUESTION 65

- (Exam Topic 5)

Your company has an Office 365 subscription. You need to add the label "External" to the subject line of each email message received by your organization from an external sender.

What should you do?

- A. From the Exchange Control Panel, add a MailTip.
- B. From the Forefront Online Protection Administration Center, set the footer for outbound email.
- C. Run the Enable-InboxRule cmdlet.
- D. From the Exchange Control Panel, run the New Rule wizard.

Answer: D

Explanation:

Transport rules can apply messaging policies to email messages flowing through your organization. It can be used to prepend the subject of the message with a text label.

NEW QUESTION 69

- (Exam Topic 5)

A company deploys an Office 365 tenant.
You need to configure single sign-on (SSO) for all user accounts.
Which two actions should you perform? Each correct answer presents part of the solution.

- A. Run the Windows PowerShell cmdlet Convert-MsolDomainToStandard.
- B. Run the Windows PowerShell cmdlet Enable-ADFSEndpoint.
- C. Run the Windows PowerShell cmdlet Convert-MsolDomainToFederated.
- D. Deploy a federation server proxy.
- E. Run the Windows PowerShell cmdlet New-ADFSOrganization.
- F. Deploy a federation server farm.

Answer: CF

Explanation:

C: The Convert-MSOLDomainToFederated cmdlet converts the specified domain from standard authentication to single sign-on (SSO).

F: Single sign-on (SSO) requires Active Directory Federation Services (AD FS) which can be installed as a federation farm.

References:

<http://technet.microsoft.com/en-us/library/dn194092.aspx>

NEW QUESTION 73

- (Exam Topic 5)

A company is deploying an Office 365 tenant.
You need to deploy a Windows Server 2012 R2 federation server farm.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

	Answer Area
Use AdfsSetup.exe to add the first federation server to the federation server farm.	
Install the Active Directory Federation Service server role.	
Use AdfsSetup.exe to add the second federation server to the federation server farm.	
Run the Windows PowerShell cmdlet Enable-ADFSEndpoint .	
Use the AD FS Federation Server Configuration Wizard to configure the first federation server in the federation server farm.	
Use the AD FS Federation Server Configuration Wizard to add the second federation server to the federation server farm.	

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

To deploy a Windows Server 2012 R2 federation server farm we need to install AD FS on the computers that will become federation servers; configure AD FS to create the first federation server in a new farm; and add the additional servers to the farm.

NEW QUESTION 74

- (Exam Topic 5)

Contoso uses Office 365 for collaboration services. You implement single sign-on (SSO) with Office 365 by using Active Directory Federation Services (AD FS).
You need to implement Windows Azure multi-factor authentication.
Which three actions should you perform? Each correct answer presents part of the solution.

- A. On the AD FS federation server, run PhoneFactorAgentSetup.exe.
- B. On the AD FS Federation server, run WindowsAzureSDK-x64.exe.
- C. On the AD FS Federation server, run the Windows PowerShell cmdlet Register-AdfsAuthenticationProvider.
- D. On the AD FS Federation server, run FsConfigWizard.exe.
- E. Run the Active Directory Domains and Trusts MMC snap-i

- F. Register Windows Azure Multi-Factor Authentication Server as an additional authentication provider.
- G. Run the Windows Azure Multi-Factor Authentication Server Authentication Configuration Wizard.

Answer: BCF

Explanation:

To implement Windows Azure multi-factor authentication in AD FS, we must install the Windows Azure Multi-Factor Authentication Server, register it in AD FS and configure multi-factor authentication.

B: The Windows Azure Multi-Factor Authentication Server can be installed by running WindowsAzureSDK-x64.exe.

C: The Register-AdfsAuthenticationProvider cmdlet registers an external authentication provider in Active Directory Federation Services (AD FS).

F: Run the Windows Azure Multi-Factor Authentication Server Authentication Configuration Wizard to configure multi-factor authentication.

NEW QUESTION 77

- (Exam Topic 6)

You are the Office 365 administrator for your company. You have a workstation that runs Windows 8. You need to install the prerequisite components so that you can view mail protection reports on the workstation.

Which two items must you install? Each correct answer presents part of the solution.

- A. SQL Server Analysis Services
- B. Microsoft Connectivity Analyzer Tool
- C. Microsoft Access 2013
- D. .NET Framework 4.5
- E. Microsoft Excel 2013

Answer: DE

Explanation:

To view the Mail Protection Reports for Office 365 on your computer, you need to install the “Microsoft Excel plugin for Exchange Online Reporting” component which is a free download from Microsoft.

The “Microsoft Excel plugin for Exchange Online Reporting” component has the following system requirements:

Supported Operating System:

- ▶ Windows 7, Windows 8, Windows Server 2008 Required Software:
- ▶ Microsoft Office Excel 2013 Additional Requirements:
- ▶ Microsoft .NET Framework 4.5
- ▶ Microsoft Online Services Sign-In Assistant (for Exchange Online Protection customers only)
- ▶ An Office 365 subscription that contains Exchange Online or Exchange Online Protection
- ▶ Email address you use to sign in to Office 365

NEW QUESTION 82

- (Exam Topic 6)

You are the Office 365 administrator for your company.

Users report that they have received significantly more spam messages over the past month than they normally receive.

You need to analyze trends for the email messages received over the past 60 days. From the Office 365 admin center, what should you view?

- A. Messages on the Service health page
- B. The Received mail report
- C. The Office 365Malware detections in sent mail report
- D. The Mailbox content search and hold report

Answer: B

Explanation:

An Office 365 administrator can use the Mail Protection Reports in Office 365to view data about malware, spam, and rule detections for up to the last 90 days.

The reports can be viewed as a graph to display trends for email messages over a period of time; in this question, for the last 60 days. The graph view will tell you if the amount of good mail, malware and spam detected has increased or decreased over the time period of the report.

The Received Mail report shows the received mail grouped by traffic type:

- ▶ Good mail – messages that were received and not identified as spam or malware.
- ▶ Spam – messages identified as spam.
- ▶ Malware – messages that contained malware.
- ▶ Transport rules – messages that matched at least one rule.

References:

[https://technet.microsoft.com/en-us/library/dn500744\(v=exchg.150\).aspx](https://technet.microsoft.com/en-us/library/dn500744(v=exchg.150).aspx)

NEW QUESTION 87

- (Exam Topic 6)

You are the Office 365 administrator for your company.

You must use Windows PowerShell to manage cloud identities in Office 365. You must use a computer that runs Windows 8 to perform the management tasks.

You need to ensure that the Windows 8 computer has the necessary software installed. What should you install first?

- A. Microsoft Office 365 Best Practices Analyzer for Windows PowerShell
- B. Windows PowerShell 4.0
- C. Remote Server Administration Tools for Windows
- D. Microsoft Online Services Sign-in Assistant

Answer: D

Explanation:

Cloud identities in Office 365 are user accounts in Azure Active Directory.

You can use Windows PowerShell to administer Office 365 and Azure Active Directory. However, the default installation of Windows PowerShell on Windows 8 (or any other version of Windows) does not include the PowerShell cmdlets required to manage Office 365 or Azure Active Directory.

You need to install the PowerShell module that includes the necessary cmdlets for managing Azure Active Directory. This module is the Windows Azure Active Directory Module for Windows PowerShell module. This module also requires that Microsoft .NET Framework 3.5 is installed and enabled.

Before the Windows Azure Active Directory Module for Windows PowerShell, can be installed, the Microsoft Online Services Sign-in Assistant must be installed.

This will allow you to connect to your Office 365/Azure subscription from a PowerShell session on a remote computer.

NEW QUESTION 91

- (Exam Topic 6)

You are the Office 365 administrator for your company. You configure new user accounts for User1 and User2. User1 has an on-premises mailbox. User2 has an Office 365 mailbox.

Each user must be able to view the availability of the other user.

You need to ascertain whether users can share their free/busy information. What should you use?

- A. Transport Reliability IP Probe (TRIPP Tool)
- B. Microsoft Remote Connectivity Analyzer Tool
- C. Business Connectivity Services
- D. Windows Azure Active Directory Rights Management

Answer: B

Explanation:

Microsoft Remote Connectivity Analyzer is a website offered by Microsoft for testing remote connectivity to server services such as Exchange Server, Skype for Business Server and Office 365. In this question, we need to run the Free/Busy test in the Microsoft Remote Connectivity Analyzer website.

The Office 365 tab on the Remote Connectivity Analyzer has several options for performing different tests regarding Office 365 connectivity. These tests include:

-  Office 365 General Tests
-  Microsoft Exchange ActiveSync Connectivity Tests
-  Microsoft Exchange Web Services Connectivity Tests
-  Microsoft Office Outlook Connectivity Tests
-  Internet Email Tests
-  Mail Flow Configuration
-  Free/Busy Test

The description given for the Free/Busy test is as follows:

“This test verifies that an Office 365 mailbox can access the free/busy information of an on-premises mailbox, and vice versa (one direction per test run).”

NEW QUESTION 96

- (Exam Topic 6)

You are the Exchange Online administrator for an organization. The organization migrates all users to Exchange Online. An employee works for a partner organization named Contoso, Ltd. The employee uses the email alias employeeel@contoso.com.

Users report that over the past week, they have not received email messages from employeeel@contoso.com. You need to trace email messages that originate from employeeel@contoso.com to users inside your organization.

In the message trace window, which two settings should you configure? To answer, select the appropriate objects in the answer area.

Search for email messages from or to a user or users. You can specify user names or fully qualified email addresses. Wildcards are supported.

Sender:

add users...

Recipient:

add users...

Message was sent or received:

Last 48 hours

Delivery status:

Message ID:

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

None of the fields in the Message Tracking window are compulsory.

In this question, the users have not received emails from employeeel@contoso.com for the last week. To view tracking information for emails from employeeel@contoso.com for the last week, we need to add employeeel@contoso.com as a sender. For a sender outside the organization, you can manually type in the email address.

The default search period is 48 hours. To view one week's worth of tracking data, we need to change the search period to 7 days.

NEW QUESTION 101

- (Exam Topic 6)

You are the Office 365 administrator for your company.

Users report that they have received significantly more spam messages over the past month than they normally receive.

You need to analyze trends for the email messages received over the past 60 days. From the Office 365 admin center, what should you view?

- A. The Mail protection reports
- B. The Mailbox content search and hold report
- C. Messages on the Message center page
- D. The Office 365 Malware detections in sent mail report

Answer: A

Explanation:

An Office 365 administrator can use the Mail Protection Reports in Office 365 to view data about malware, spam, and rule detections for up to the last 90 days.

The reports can be viewed as a graph to display trends for email messages over a period of time; in this question, for the last 60 days. The graph view will tell you if the amount of good mail, malware and spam detected has increased or decreased over the time period of the report.

NEW QUESTION 105

- (Exam Topic 7)

You need to gather the required report information for your email users. What should you do?

- A. In the Security & Compliance admin center, use the Top Mail Senders report.
- B. In the Exchange admin center, use the spam filter.
- C. In the Office 365 Admin center, use the Email Activity Usage report
- D. In the Office 365 Admin center, use the Top Rule Matches for Mail report.
- E. In the Security & Compliance admin center, use the Spam Detections report

Answer: A

Explanation:

References:

<https://docs.microsoft.com/en-us/office365/securitycompliance/view-email-security-reports#top-senders-and-rec>

NEW QUESTION 110

- (Exam Topic 7)

You need to troubleshoot issues that Test.User1 reports. What should you do?

- A. Run the Microsoft Support and Recovery Assistant for Office 365.
- B. Repair the Office ProPlus installation.
- C. Run the hybrid environment free/busy troubleshooter.
- D. Run The Microsoft Office Configuration Analyzer Tool.

Answer: C

Explanation:

References:

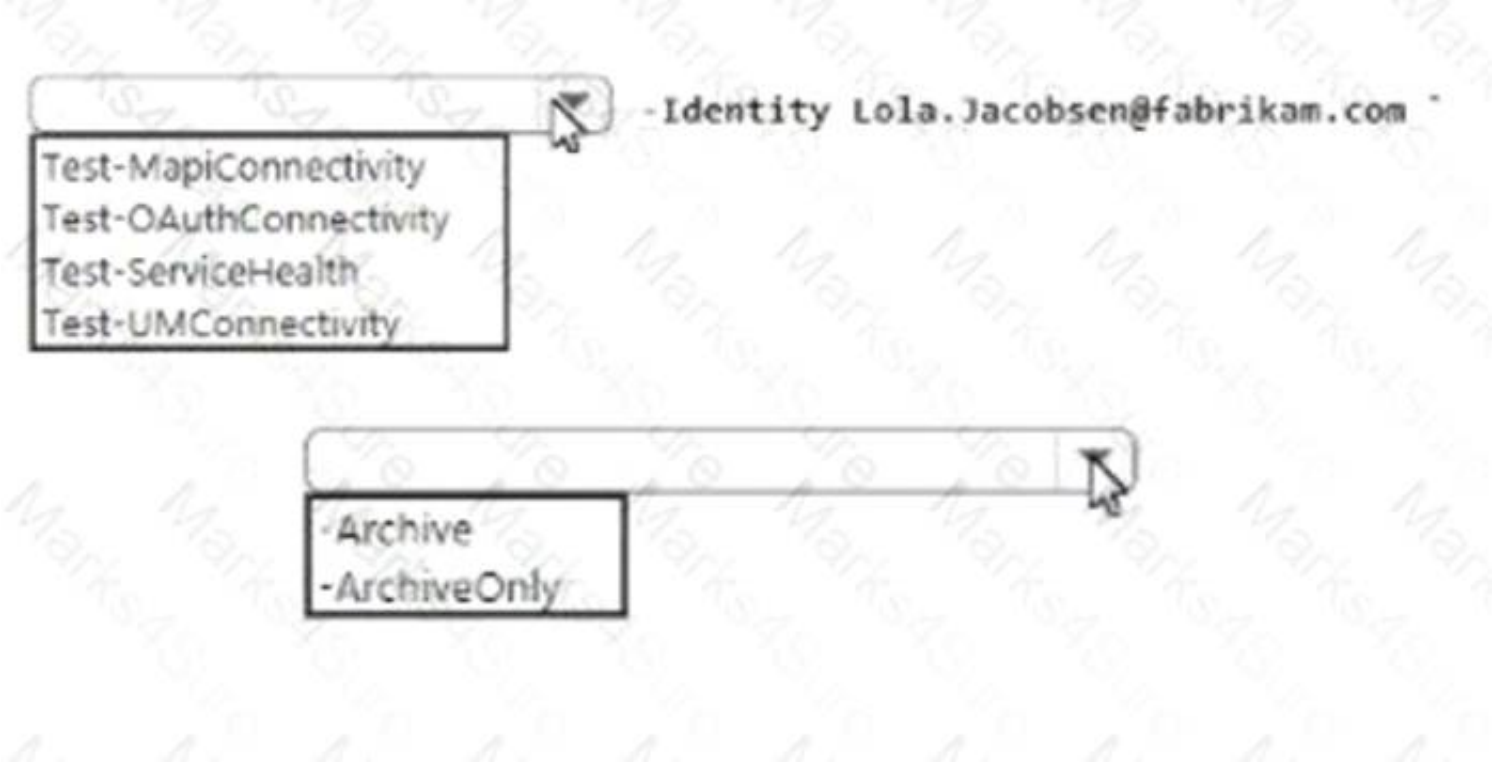

<https://support.microsoft.com/en-gb/help/10092/troubleshooting-free-busy-issues-in-exchange-hybrid-environm>

NEW QUESTION 113

- (Exam Topic 7)

You need to troubleshoot the issues for user Lola.Jacobsen.

Which command should you run? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

References:

<https://docs.microsoft.com/en-us/powershell/module/exchange/mailboxes/test-mapiconnectivity?view=exchange>

NEW QUESTION 117

- (Exam Topic 7)

You need to implement authentication.

Which sign-in methods should you use? To answer, drag the appropriate sign-in methods to the correct Office JGS environments, Each method may be used once, more than once, or not at all. You may need to Crag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer area

Office 365 environment	Sign-in method
Contoso.com	AD FS
Devfabrikam.com	AD FS

NEW QUESTION 122

- (Exam Topic 7)

Note: This question is part of a series of questions that present the same scenario. Each question in the series holds a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You need to implement the integration between Active Directory and Office 365 for the new domain. Solution: Create a tenant for tailspintoys.com. Perform a Custom installation of Azure AD Connect. Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 124

- (Exam Topic 7)

You need to request a certificate for AD FS. Which two options should you use? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point

- A. Subject Alternate Names of fs.devfabrikam.com and enterpriseregistration.devfabrikam.com
- B. Subject name of fs.fabrikam.com
- C. Subject Alternate Names of fs.windows.net and enterpriseregistration.windows.net
- D. Subject name of fs.devfabrikam.com
- E. Subject Alternate Names of fs.fabnkam.com and enterpriseregistration.fabrikam.com

Answer: DE

NEW QUESTION 129

- (Exam Topic 7)

You need to design the SSO solution for the Development environment. How should you configure the environment? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Component	Option
Web Application Proxy (WAP)	<div>1 server</div> <div>2 servers</div>
AD FS	<div>1 server</div> <div>2 servers</div>
Database	<div>Windows Internal Database</div> <div>Microsoft SQL Server database</div>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Component	Option
Web Application Proxy (WAP)	2 servers
AD FS	2 servers
Database	Microsoft SQL Server database

NEW QUESTION 134

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You need to ensure that a user named User1 can create mailboxes in Exchange Online and sites in SharePoint Online.
Solution: You add User1 to the SharePoint administrator admin role. Does this meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 137

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You need to recommend a solution to meet the technical requirement for monitoring the health information. What should you recommend?

- A. Use the Office 365 Admin app to receive push notifications.
- B. From the Office 365 admin center, modify the Services and &add-ins settings.
- C. From the Office 365 admin center, modify the Organization Profile settings.
- D. Use the Company Portal app to receive push notifications.

Answer: A

Explanation:

You can use the Office 365 Admin app on your mobile device to view Service health, which is a great way to stay current with push notifications.
References:
<https://support.office.com/en-gb/article/How-to-check-Office-365-service-health-932ad3ad-533c-418a-b938-6e4>

NEW QUESTION 141

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You need to ensure that all of the planned changes for the AD FS sign-in webpage are performed successfully. Which cmdlet should you use to perform each change? To answer, drag the appropriate cmdlets to the correct types of change. Each cmdlet may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Cmdlets

Set-AdfsGlobalWebContent

Set-AdfsRelayingPartyWebContent

Set-AdfsWebTheme

Answer Area

Include the Fabrikam logo:

Cmdlet

Include the help desk phone number:

Cmdlet

Include the sign-in description:

Cmdlet

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

References:

[https://technet.microsoft.com/en-us/library/dn280950\(v=ws.11\).aspx](https://technet.microsoft.com/en-us/library/dn280950(v=ws.11).aspx)

NEW QUESTION 146

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to configure the Office 365 subscription to ensure that Active Directory users can connect to Office 365 resources by using single sign-on (SSO).

Solution: You run Convert-MsolFederatedUser for all users. Does this meet the goal?

A. Yes

B. No

Answer: B

Explanation:

The Convert-MsolFederatedUser cmdlet updates a user in a domain that was recently converted from single sign-on to standard authentication type. This option will not meet the objective of the question.

References:

<https://docs.microsoft.com/en-us/powershell/module/msonline/convert-msolfederateduser?view=azureadps-1.0>

NEW QUESTION 147

- (Exam Topic 8)

You need to modify the Office 365 subscription to support the planned changes for the devices that connect from untrusted networks.

You enable Azure multi-factor authentication for all of the users in the subscription. What should you do next from the Office 365 portal?

A. Add a trusted domain.

B. Set the Trusted IPs to 10.0.1.0/24 and 10.0.2.0/24.

C. Set the Trusted IPs to 192.168.1.100/32 and 192.168.2.100/32

D. Convert the fabrikam.com domain to a federated domain.

Answer: C

Explanation:

Adding trusted IP's is excluding a set of addresses from MFA. MFA is hosted outside your LAN so you communicate with the service using your public IP's.

The case tells us that the external IP's are 192.168.1.100 and 192.168.2.100 so these should be added as trusted IP's in MFA.

References:

<https://docs.microsoft.com/nl-nl/azure/multi-factor-authentication/multi-factor-authenticationwhats-next#trusted>

NEW QUESTION 148

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to configure the Office 365 subscription to ensure that Active Directory users can connect to Office 365 resources by using single sign-on (SSO).

Solution: You run Convert-MsolDomainToStandard for the fabrikam.com domain and the contoso.com domain.

Does this meet the goal?

A. Yes

B. No

Answer: B

NEW QUESTION 149

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You deploy Azure AD Connect.

You modify the UPN suffix of each sales department user to fabrikam.com. You need to ensure that the Active Directory changes are updated in Office 365.

What command should you run? To answer, select the appropriate options in the answer area.

Answer Area

Set-MsolUserPrincipalName -UserPrincipalName username@

▼

Contoso.com

Fabrikam.com

Fabrikamfinancialservices.onmicrosoft.com

-NewUserPrincipalName username@

▼

Contoso.com

Fabrikam.com

Fabrikamfinancialservices.onmicrosoft.com

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The Set-MsolUserPrincipalName cmdlet is used to change the User Principal Name, or user ID, of a user. It can be used to move a user between a federated and standard domain, which results in their authentication type changing to that of the target domain.

References:

<https://docs.microsoft.com/en-us/powershell/module/msonline/set-msoluserprincipalname?view=azureadps-1.0>

NEW QUESTION 153

- (Exam Topic 8)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to identify which report must be used to view previous tasks performed in Office 365.

Which type of report should you use for each task? To answer, drag the appropriate reports to the correct tasks. Each report may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Reports

Audit log search

Mail protection

Office 365 usage

Answer Area

Each cloud account created: Report

Each modification to the password policy: Report

Each Office activation: Report

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Account creation falls under the user administration activities that are logged by the audit log.

Password policy modification falls under the Azure AD directory and domain related activities that are logged by the audit log.

The Office activations report is available in the Office 365 admin center. References:

<https://support.office.com/en-us/article/Search-the-audit-log-in-the-Office-365-Security-Compliance-Center-0d4> <https://support.office.com/en-us/article/Activity-Reports-in-the-Office-365-Admin-Center-0d6dfb17-8582-4172>

NEW QUESTION 155

- (Exam Topic 9)

You need to provision an account for a new sales executive at Contoso, Ltd.

What should you do? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area	
Action	Option
Log on to the following server:	<div><div></div><div>Server1.contoso.com</div><div>Server2.contoso.com</div></div>
Run the following Windows PowerShell command:	<div><div></div><div>Start-AdsyncSyncCycle -PolicyType Delta</div><div>Start-AdsyncSyncCycle -PolicyType Initial</div><div>Task Scheduler MMC</div><div>Start-ScheduledTask</div><div>DirectorySyncClientCmd.exe Delta</div><div>DirectorySyncClientCmd.exe Initial</div></div>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The Azure Active Directory (Azure AD) Connect application for the contoso.com domain runs on Server1.contoso.com. The Start-ADSyncSyncCycle -PolicyType Initial command initiates a full sync cycle. A full sync cycle is required when you have made one of the following configuration changes:
An account falls under objects. References:
<https://docs.microsoft.com/en-us/azure/active-directory/connect/active-directory-aadconnectsync-feature-schedu>

NEW QUESTION 159

- (Exam Topic 9)
You need to implement an authentication solution for contoso.com users. What should you do?

- A. Install two Active Directory Federation Services (AD FS) servers and two AD FS Proxy servers.
- B. Install a second Azure AD Connect serve
- C. Add a second SQL Server instance in an Always On Failover Cluster and implement password sync.
- D. Install two Active Directory Federation Services (AD FS) servers and two Web Application Proxy (WAP) servers.
- E. Install a single Active Directory Federation Services (AD FS) server and a single Web ApplicationProxy (WAP) server.

Answer: A

NEW QUESTION 161

- (Exam Topic 9)
You need to ensure that new accounts are provisioned correctly.
What should you do? To answer, select the appropriate options in the answer area. NOTE: Each selection is worth one point.

Answer area	Option
Log on to the following server:	<div>Server1.contoso.com ▼</div> <div>Server2.contoso.com</div>
Perform the following action:	<div>Run the Set-AdSynsScheduled cmdlet. ▼</div> <div>Use the Task Scheduler MMC snap-in.</div> <div>Run the Set-ScheduledTask cmdlet.</div> <div>Edit the Microsoft.Online.DirSync.Scheduler.exe.config file</div>
Change the synchronization interval to the following value:	<div>30 minutes ▼</div> <div>120 minutes</div> <div>160 minutes</div>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The Azure Active Directory (Azure AD) Connect application for the contoso.com domain runs on Server1.contoso.com. The Set-ADSyncScheduler cmdlet allows you to modify the CustomizedSyncCycleInterval parameter. The question states: “You receive reports that new users are not granted access to Office 365 resources fast enough. You must ensure that new accounts are provisioned as quickly as possible.” Since the scheduler is already configured to sync every 2 hours (120 min.), 30 minutes should be configured.
 References:
<https://docs.microsoft.com/en-us/azure/active-directory/connect/active-directory-aadconnectsync-feature-schedu>

NEW QUESTION 164

- (Exam Topic 9)
 You enable password synchronization for Contoso, Ltd.
 You need to implement the authentication requirements for users in the sales team. Which Windows PowerShell command should you run?

- A. Set-MsolDomainAuthentication -DomainName fabricam.com -Authentication Managed
- B. Convert-MsolDomainToStandard -DomainName contoso.com
- C. Set-MsolDomainAuthentication -DomainName contoso.com -Authentication Managed
- D. Convert-MsolDomainToStandard -DomainName fabricam.com

Answer: C

Explanation:

The domain being associated with Office 365 must be managed by Office 365 before single sign-on and provisioning can be enabled for your users.
 References:
<https://support.onelogin.com/hc/en-us/articles/203748160-Disabling-ADFS-federation-to-enable-OneLogin-SSO>

NEW QUESTION 168

- (Exam Topic 9)
 You need to implement the password policy for ADatum Corporation users.
 How should you complete the Windows PowerShell command? To answer, select the appropriate options in the answer area.
 NOTE: Each correct selection is worth one point.

Answer Area

Set-MsolPasswordPolicy Set-ADDefaultDomainPasswordPolicy Set-ADFineGrainedPasswordPolicy Set-MsolUserPassword	-ValidityPeriod 180 -ValidityPeriod 14 -MaxPasswordAge 180 -MaxPasswordAge 14
-NotificationDays 14 -NotificationDays 180 -PasswordHistoryCount 14 -PasswordHistoryCount 180	-DomainName adatum.com

- A. Mastered
 B. Not Mastered

Answer: A

Explanation:

Set-MsolPasswordPolicy -ValidityPeriod 180 -NotificationDays 14 -DomainName adatum.com

The Set-MsolPasswordPolicy cmdlet is used to update the password policy of a specified domain or tenant. The –ValidityPeriod parameter stipulates the length of time that a password is valid before it must be changed. The –NotificationDays parameter stipulates the number of days before the password expiration date that triggers when users receive their first notification that their password will soon expire.

References:

<https://docs.microsoft.com/en-us/powershell/module/msonline/set-msolpasswordpolicy?view=azureadps-1.0>

NEW QUESTION 170

- (Exam Topic 9)

You need to create a DNS record to resolve the email issues for ADatum Corporation users.

How should you configure the DNS record? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

Record type	Value
TXT MX CNAME	v=spf1 include:spf.protection.outlook.com -all adatum-com.mail.protection.outlook.com autodiscover.outlook.com clientconfig.microsoftonline-p.net

- A. Mastered
 B. Not Mastered

Answer: A

Explanation:

MX (mail exchanger) records offer an simple way for mail servers to know where to send email. If you want Office 365 to receive all email addressed to anyone@contoso.com, the MX record for contoso.com should point to Office 365, and it will look like the following example:

Hostname: contoso-com.mail.protection.outlook.com Priority: 0

TTL: 1 hour References:

<https://support.office.com/en-us/article/Create-DNS-records-at-Register365-for-Office-365-004030b4-10ad-402> [https://technet.microsoft.com/en-us/library/jj937232\(v=exchg.150\).aspx](https://technet.microsoft.com/en-us/library/jj937232(v=exchg.150).aspx)

NEW QUESTION 174

- (Exam Topic 11)

Contoso, Ltd. has an on-premises SharePoint environment. The company plans to deploy SharePoint Online. You must use Active Directory Federation Services (AD FS). The global administrator account must be able to access the Office 365 tenant even if AD FS is unavailable.

You need to set up the global administrator account. What should you do?

- A. In the Office 365 admin center, create a user named sp_admin@contoso.onmicrosoft.com
 B. In the Office 365 admin center, create a user named sp_admin@contoso.com
 C. In Active Directory Domain Services Users and Computers, create a user named sp_admin@contoso.onmicrosoft.com
 D. In Active Directory Domain Services Users and Computers, create a user named sp_admin@contoso.com

Answer: A

Explanation:

One of the first steps is to create SPO administrative account. You should always plan to create this account as Cloud ID, E.g. sp_admin@yourdomain.onmicrosoft.com. Having this as Cloud ID, it allows you to access your tenant even if On-Premises ADFS environment is unavailable. You can provision new Cloud Account from the Office 365 Administration site.

References:

<https://nikpatel.net/2014/06/03/best-practices-for-configuring-sharepoint-online-tenant-part-ii-configuring-share>

NEW QUESTION 177

- (Exam Topic 11)

You administer an Office 365 tenant for a company named Fabrikam, Inc. You deploy Active Directory Federation Services (AD FS) including Web Application Proxy servers.

You need to customize the AD FS logon screen to display your company name.

How should you complete the Windows PowerShell command? To answer, select the appropriate Windows PowerShell segments in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

<div>▼</div> <div>Set-AdfsGlobalWebContent</div> <div>Set-AdfsWebTheme</div> <div>Set-AdfsFarmInformation</div> <div>Set-AdfsWebConfig</div>	<div>▼</div> <div>-CompanyName</div> <div>-TargetName</div> <div>-Name</div> <div>-Identity</div>	"Fabrikam Company"
--	---	--------------------

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Set-AdfsGlobalWebContent -CompanyName " Fabrikam Company"

Running the Set-AdfsGlobalWebContent cmdlet with the –CompanyName parameter specifies the company name for AD FS to display in the sign-in pages when you have not set a logo on the active web theme.

NEW QUESTION 178

- (Exam Topic 11)

You deploy an Office 365 tenant for your company. The tenant contains the domain names contoso.onmicrosoft.com and contoso.com. You have an on-premises Active Directory Domain Services (AD DS) domain named contoso.com.

You have the following requirements:

- ☒ Use active Directory Federation Services (AD FS) for authentication when users sign in to the Office 365 environment.
- ☒ Use Web Application Proxy (WAP) servers that run Windows Server 2012 R2.
- ☒ Ensure that Workplace Join is available for all users.

You need to request a certificate for the WAP servers. NOTE: Each correct selection is worth one point.

Answer area

Subject name

Adfs.contoso.com
Adfs.contoso.onmicrosoft.com
Adfs.microsoft.com

Subject Alternative Names

Adfs.contoso.com
Adfs.contoso.onmicrosoft.com
Adfs.microsoft.com

Enterpriseregistration.contoso.com
Enterpriseenrollment.contoso.com
Enterpriseregistration.onmicrosoft.com
Enterpriseenrollment.contoso.onmicrosoft.com

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer area

Subject name

Adfs.contoso.com
Adfs.contoso.onmicrosoft.com
Adfs.microsoft.com

Subject Alternative Names

Adfs.contoso.com
Adfs.contoso.onmicrosoft.com
Adfs.microsoft.com

Enterpriseregistration.contoso.com
Enterpriseenrollment.contoso.com
Enterpriseregistration.onmicrosoft.com
Enterpriseenrollment.contoso.onmicrosoft.com

NEW QUESTION 179

- (Exam Topic 11)

You are the Office 365 administrator for a company. You deploy Office 365 ProPlus.

You need to ensure that specific users can provide early feedback of Office updates as soon as they get released.

What should you do? To answer, select the appropriate options in the dialog box in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

Office 365 admin center

In Office 365 admin center, enable First Release for the test users.
 Run the Set-OrganizationConfig Windows PowerShell cmdlet.
 Edit the configuration.xml file and run setup.exe.
 Run the Set-MsolCompanySettings Windows PowerShell cmdlet.

Office 365 ProPlus

In Office 365 admin center, enable First Release for the test users.
 Run the Set-OrganizationConfig Windows PowerShell cmdlet.
 Edit the configuration.xml file and run setup.exe.
 Run the Set-MsolCompanySettings Windows PowerShell cmdlet.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

References:

<https://support.office.com/en-us/article/set-up-the-standard-or-targeted-release-options-in-office-365-3b3adfa4-1> <https://docs.microsoft.com/en-us/deployoffice/configuration-options-for-the-office-2016-deployment-tool>

NEW QUESTION 182

- (Exam Topic 11)

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in the question apply only to that question.

A company has an Office 365 tenant that has an Enterprise E1 subscription. You synchronize disabled user accounts from an Active Directory Domain Services environment.

You need to enable the user accounts in Office 365. Which Windows PowerShell cmdlet should you run?

- A. Set-MsolUser
- B. Redo-MsolProvisionUser
- C. Set-MsolUserLicense
- D. Set-MsolUserPrincipalName
- E. Convert-MsolFederatedUser
- F. Set-MailUser
- G. Set-LinkedUser

Answer: A

Explanation:

The Set-MsolUser cmdlet is used to update a user object. This cmdlet should be used for basic properties only. Example: The following command sets the multi-factor authentication on this user.

Enable a user:

```
$st = New-Object -TypeName Microsoft.Online.Administration.StrongAuthenticationRequirement
```

```
$st.RelyingParty = ""
```

```
$st.State = "Enabled"
```

```
$sta = @($st)
```

```
Set-MsolUser -UserPrincipalName user@contoso.com -StrongAuthenticationRequirements $sta
```

NEW QUESTION 186

- (Exam Topic 11)

Your company purchases an Office 365 plan. The company has an Active Directory Domain Services domain. User1 must be able to manage Office 365 delegation for the company.

You need to ensure that User1 can assign administrative roles to other users. What should you do?

- A. Create an Office 365 tenant and assign User1 the service administrator role.
- B. Use an existing user management administrator account to assign a role with the correct permissions to User1.
- C. Create an Office 365 tenant and assign User1 the global administrator role.
- D. Create an Office 365 tenant and assign User1 the user management administrator role.

Answer: D

Explanation:

D: The Global Administrator account is similar to the Company administrator. Users in this role have access to everything or the permission to add them to a dedicated role where they do not have permission (such as discovery management and assigning administrative roles to other users).

NEW QUESTION 188

- (Exam Topic 11)

You manage an Active Directory Domain Services (AD DS) domain. Your company plans to move all of its resources to Office 365.

You must implement Active Directory Federation Services (AD FS). You place all internet-facing servers on a perimeter network.

You need to ensure that intranet and extranet users are authenticated before they access network resources. Which three authentication methods should you provide for extranet users? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Windows Integrated Authentication using Negotiate for NTLM
- B. Windows Integrated Authentication using Negotiate for Kerberos
- C. Authentication with RADIUS
- D. Forms Authentication using username and passwords
- E. Certificate Authentication using certificates mapped to user accounts in AD DS

Answer: BDE

Explanation:

Windows Integrated Authentication makes use of Negotiate/Kerberos or NTLM to authenticate users based on an encrypted ticket/message passed between a browser and a server.

With Azure AD you need Forms-based authentication in ADFS for Azure AD/MSONline PowerShell Module and Azure AD Self-Service Password Reset.

In Active Directory mapping, when the IIS server receives a certificate from the user, it passes it on to Active Directory, which maps it to a Windows user account. The IIS server then logs this account on.

Active directory mapping is most useful when the account mappings are the same on all IIS servers. Administration is simplified because the mapping is done in only one place.

NEW QUESTION 193

- (Exam Topic 11)

Your company deploys an Office 365 tenant.

You need to ensure that you can view service health and maintenance reports for the past seven days. What are two possible ways to achieve this goal? Each correct answer presents a complete solution.

- A. Subscribe to the Office 365 Service Health RSS Notifications feed.
- B. View the service settings page of the Office 365 admin center.
- C. Run the Microsoft Fast Track Tool.
- D. View the service health current status page of the Office 365 admin center.

Answer: AD

Explanation:

D: See the status of all your services and their components in the Office 365 admin center

-  Sign in to Office 365 with your work or school account.
-  Go to the Office 365 admin center.
-  Go to Health > Service health.
-  On the Service health page, view the current status of your services.

Do any of the following:

- a) For details, select a service.
- b) To see status history, select View history, and then select a day on the calendar.

A: In the top right corner of the Service Health page, there is an RSS icon. You can click on the RSS icon to sign up for the service health RSSfeed, which will email you when a new event is added or an existing event is updated.

References:

<https://support.office.com/en-us/article/View-the-status-of-your-services-932ad3ad-533c-418a-b938-6e44e8bc3>

NEW QUESTION 194

- (Exam Topic 11)

Your company uses Office 365 and has an Enterprise E3 plan. The company has a Microsoft SharePoint Online public website that is currently configured to use the onmicrosoft.com domain name.

The company purchases a new domain name.

You need to change the address of the SharePoint Online public website to the new domain name. What should you do first?

- A. In the SharePoint Online Administration Center, add the new domain.
- B. In the Office 365 admin center, add the new domain.
- C. Create a new site collection and assign it the new domain.
- D. Create a new public website and assign it to the new domain.

Answer: B

Explanation:

If you go to the SharePoint Online Administration Center and click the "Add Domain" button it takes you to the same location as if you would have clicked the "Domains" -> "Add domain" option from the Office 365 admin center.

So either A or B is technically correct, but if I had to choose one of the two I would select B. References:

<https://support.office.com/en-us/article/Rename-your-SharePoint-Online-Public-Website-address-to-use-your-cus> AF4D-F025B3825ED3

<https://support.office.com/en-us/article/Rename-your-SharePoint-Online-Public-Website-address-to-use-your-cus> a1cc-c6bda0a99986?ui=en-US&rs=enUS&ad=US

<https://support.office.com/en-us/article/Verify-your-domain-in-Office-365-6383f56d3d09-4dcb-9b41-b5f5a5efd>

NEW QUESTION 196

- (Exam Topic 11)

You are deploying a new Office 365 tenant for a company. You plan to use the default domain Fabricam.onmicrosoft.com. Employees currently use Fabricam.com for their email address in the on-premises email system.

You have the following requirements:

- ▶ All users need to be migrated to Microsoft Exchange Online.
- ▶ Fabricam.com must be used for the email domain and Office 365 user principal name.

You need to start the new domain process and generate a CSV import file for your on-premises DNS servers. How should you complete the Windows PowerShell commands? To answer, configure the appropriate options in the dialog box in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

\$domain = "

Fabricam.com

Fabricam.onmicrosoft.com

Fabricam.microsoft.com

"

New-MsolDomain

New-RemoteDomain

-Name \$domain

Get-MsolDomain

Get-MsolDomainVerificationDns

Get-RemoteDomain

-DomainName \$domain -Mode DnsTxtRecord

| select Label, Text, Ttl | export -csv -Path c:\DNS.csv -NoTypeInformation

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box1

Fabricam.onmicrosoft.com Box2

New-MsolDomain Box3

Get-MsolDomainVerificationDns

The questions states: "You plan to use the default domain Fabricam.onmicrosoft.com." The New-MsolDomain cmdlet adds a domain to Azure Active Directory.

The Get-MsolDomainVerificationDns cmdlet retrieves the necessary DNS records to verify a domain. References:

<https://docs.microsoft.com/en-us/powershell/module/msonline/new-msoldomain?view=azureadps-1.0> <https://docs.microsoft.com/en-us/powershell/module/msonline/get-msoldomainverificationdns?view=azureadps-1.0>

NEW QUESTION 197

- (Exam Topic 11)

You are an administrator for a company. You are planning an Office 365 pilot. The deployment must provide the following features:

- Chat-centered workspaces for collaboration
 - A method for users to share files with colleagues
 - The ability for users to share their calendars with other users in the organization
- You need to implement the pilot.

Which Office 365 services should you implement? To answer, select the appropriate options in the answer area.

NOTE; Each correct selection is worth one point.

Answer Area	Requirement	Office 365 Service
	Chat-centered workspace	SharePoint Online Yammer Microsoft Groups Microsoft Teams Skype for Business
	File sharing	SharePoint Online OneDrive for Business Exchange Online Microsoft Teams Yammer
	Calendar sharing	SharePoint Online OneDrive for Business Exchange Online Microsoft Teams Skype for Business

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Answer Area	Requirement	Office 365 Service
	Chat-centered workspace	SharePoint Online Yammer Microsoft Groups Microsoft Teams Skype for Business
	File sharing	SharePoint Online OneDrive for Business Exchange Online Microsoft Teams Yammer
	Calendar sharing	SharePoint Online OneDrive for Business Exchange Online Microsoft Teams Skype for Business

NEW QUESTION 199

- (Exam Topic 11)

Your company uses Office 365 for all users. The company has the contoso.com SIP domain.

You need to change the SIP address of a user named User1 from user1@contoso.com to user2@contoso.com. You must achieve this goal in the minimum amount of time.

What should you do?

- A. Modify the PrimarySmtpAddress attribute of User1.
- B. Add a proxy address to the properties of User1.
- C. Create a service request.
- D. Modify the sign-in status of User1.

Answer: A

Explanation:

References: [https://technet.microsoft.com/en-us/library/dd335189\(v=exchg.150\).aspx](https://technet.microsoft.com/en-us/library/dd335189(v=exchg.150).aspx)

NEW QUESTION 200

- (Exam Topic 11)

You have a legacy application that needs to send email to employees. The legacy application runs on a client computer.

The legacy application must send email by using IMAP through Exchange Online. You need to identify the correct host name and port information.

Which settings should you use?

- A. Imap.office365.com and port 993
- B. Imap.office365.com and port 143
- C. Outlook.office365.com and port 993
- D. Outlook.office365.com and port 143

Answer: C

Explanation:

For Office 365 for business, use the following settings.

-  IMAP4
-  outlook.office365.com
-  993 implicit

NEW QUESTION 201

- (Exam Topic 11)

You are the Office 365 administrator for Contoso, Ltd. You synchronize Active Directory Domain Services (AD DS) user accounts with an Office 365 environment by using Microsoft Azure Active Directory (Azure AD) Connect. You use a test account named Test1@contoso.com to perform configuration testing. The account currently accesses on-premises resources.

The Test1@contoso.com account experiences issues with Microsoft Exchange Online and SharePoint Online. You need to quickly recreate the account and prevent interruption in access to the on-premises resources. What should you do?

- A. Run the Remove -SPOUser cmdlet.
- B. Run the Remove -MsolUser cmdlet.
- C. In the Office 365 admin center, find and delete the account.
- D. Run the Remove ADUser cmdlet.
- E. In the Azure AD admin center, find and delete the account.

Answer: D

NEW QUESTION 206

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are the administrator for a company. You plan to use Office 365 for email and file sharing. You plan to implement a hybrid deployment with your current on-premises Active Directory Domain Services (AD DS) environment and Microsoft Azure Active Directory (Azure AD) Connect.

You must deploy Microsoft Exchange Online and OneDrive for Business for all employees. You have the following security requirements:

-  All employees must use complex passwords.
-  Passwords must be changed every six months.
-  Employees must use multi-factor authentication (MFA) when possible.

You need to implement MFA verification options to use with the employee's password. Solution: Have the employee use a virtual smart card.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

MFA for Office 365 requires users to acknowledge a phone call, text message, or app notification on their smart phones after correctly entering their passwords. Virtual smartcards are not required.

References:

<https://support.office.com/en-us/article/Set-up-multi-factor-authentication-for-Office-365-users-8f0454b2-f51a->

NEW QUESTION 209

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

You have an on-premises Active Directory forest.

You deploy Active Directory Federation Services (AD FS) and purchase an Office 365 subscription. You need to create a trust between the AD FS servers and the Office 365 subscription.

Solution: You run the Convert-MsolDomainToFederated cmdlet. Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

Each domain that you want to federate must either be added as a single sign-on domain or converted to be a single sign-on domain from a standard domain. Adding or converting a domain sets up a trust between AD FS and Microsoft Azure Active Directory (Microsoft Azure AD). The Convert-MSOLDomainToFederated cmdlet converts the specified domain from standard authentication to single sign-on (also known as identity federation), including configuring the relying party trust settings between the Active Directory Federation Services (AD FS) server as part of converting a domain from standard authentication to single sign-on, each user must also be converted. This conversion happens automatically the next time a user signs in; no action is required by the administrator.

References:

[https://msdn.microsoft.com/en-us/library/azure/dn194092\(v=azure.98\).aspx](https://msdn.microsoft.com/en-us/library/azure/dn194092(v=azure.98).aspx) <https://msdn.microsoft.com/en-us/library/azure/jj205461.aspx>

NEW QUESTION 212

- (Exam Topic 11)

You have an Office 365 tenant that uses an Enterprise E3 subscription. You have two servers in a perimeter network that have the Active Directory Federation Services (AD FS) proxy role service installed. A federation server farm is located behind a firewall.

You need to ensure that the AD FS proxies can communicate with the federation server farm.

Which two name resolution strategies can you use? Each correct answer presents a complete solution.

- A. HOSTS file on the proxy servers
- B. DNS server in the perimeter network
- C. LMHOSTS file on the proxy servers
- D. LMHOSTS file on the federation servers
- E. HOSTS file on the federation servers

Answer: AB

Explanation:

Configure Name Resolution for a Federation Server Proxy in a DNS Zone That Serves Only the PerimeterNetwork

So that name resolution can work successfully for a federation server in an Active Directory Federation

Services (AD FS) scenario in which one or more Domain Name System (DNS) zones serve only the perimeter network, the following tasks must be completed:

- ▶ The hosts file on the federation server proxy must be updated to add the IP address of a federation server.
- ▶ DNS in the perimeter network must be configured to resolve all client requests for the AD FS host name to the federation server proxy. To do this, you add a host (A) resource record to perimeter DNS for the federation server proxy.

References:

<https://technet.microsoft.com/en-us/library/dd807045.aspx>

NEW QUESTION 215

- (Exam Topic 11)

Contoso, Ltd. has an Office 365 tenant. The company uses single sign-on (SSO). You need to disable the use of SSO.

How should you complete the relevant Windows PowerShell commands? To answer, select the appropriate Windows PowerShell segment from each list in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

\$cred = Get-Credential

[Default Office 365 admin]
[Active Directory Enterprise admin]

Connect-MsolService -Credential \$cred

Convert-MsolDomainToStandard
Convert-MsolDomainToFederated

-DomainName contoso.com

-SkipUserConversion \$false

-PasswordFile c:\password.txt

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The Convert-MsolDomainToStandard cmdlet converts the specified domain from single sign-on to standard authentication. To achieve this, you need to use Office 365 administrator credentials that are not SSO-enabled.

References:

<https://docs.microsoft.com/en-us/powershell/module/msonline/convert-msoldomaintostandard?view=azureadps->

<https://social.technet.microsoft.com/wiki/contents/articles/17857.dirsync-how-to-switch-from-single-sign-on-to->

NEW QUESTION 220

- (Exam Topic 11)

A company has an Office 365 tenant that has an Enterprise E1 subscription. The company has offices in several different countries. You need to restrict Office 365 services for existing users by location. Which Windows PowerShell cmdlet should you run?

- A. Set-MsolUser
- B. Redo-MsolProvisionUser
- C. Set-MsolUserLicense
- D. Set-MsolUserPrincipalName
- E. Convert-MsolFederatedUser
- F. Set-MailUser
- G. Set-LinkedUser
- H. New-MsolUser

Answer: A

Explanation:

The Set-MsolUser cmdlet is used to update a user object.

Example: The following command sets the location (country) of this user. The country must be a two-letter ISO code. This can be set for synced users as well as managed users.

Set-MsolUser -UserPrincipalName user@contoso.com -UsageLocation "CA" Note:

Some organizations may want to create policies that limit access to Microsoft Office 365 services, depending on where the client resides.

Active Directory Federation Services (AD FS) 2.0 provides a way for organizations to configure these types of policies. Office 365 customers using Single Sign-On (SSO) who require these policies can now use client access policy rules to restrict access based on the location of the computer or device that is making the request. Customers using Microsoft Online Services cloud User IDs cannot implement these restrictions at this time.

NEW QUESTION 222

- (Exam Topic 11)

Your company has an Office 365 subscription that is configured for single sign-on (SSO) to an on-premises deployment of Active Directory.

Office 2016 is deployed to all workstations. Microsoft OneDrive for Business is used to replicate My Documents to OneDrive for Business.

You need to ensure that when clients connect to Office 365 from an untrusted network, they can access Office 365 resources by using a web browser.

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Modify the Sharing settings for SharePoint Online.
- B. Disable modern authentication.
- C. Add a claims provider trust.
- D. Add a relying party trust.
- E. Add a new rule.

Answer: BC

Explanation:

B: In Skype for Business Server 2015, Modern Authentication is used between on-premises clients and on-premises servers in order to give users a proper level of authorization to resources.

C: A Claims Provider trust is one where ADFS gets claims from the Claim Provider, which could be the local AD as Claims Provider or an external Claims Provider.

NEW QUESTION 225

- (Exam Topic 11)

You are the system administrator for a small sales company in Chicago.

You must migrate all users to Office 365. You add a domain to the Office 365 tenant. You need to verify the new domain.

Which type of DNS record should you create?

- A. A
- B. NS
- C. TXT
- D. PTR

Answer: C

NEW QUESTION 229

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are the Office 365 administrator for a company. You plan to deploy Microsoft Skype for Business Online for all employees.

You need to verify domain ownership. Solution: Add an MX record.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: A

NEW QUESTION 230

- (Exam Topic 11)

You are the system administrator for a manufacturing company. You plan to implement Office 365.

You must create accounts for all employees and implement a password policy that requires strong passwords. Which two characters can users include in passwords? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

- A. spaces
- B. *
- C. <
- D. Unicode characters
- E. !

Answer: BE

NEW QUESTION 234

- (Exam Topic 11)
 You are the system administrator for a small business. You manage on-premises file shares. You need to migrate the file shares to Microsoft SharePoint Online document libraries.
 Which actions should you perform? To answer, select the appropriate action in the dialog box in the answer area.
 NOTE: Each correct selection is worth one point.

Answer Area

Pilot steps	Pilot action
Step 1	<div>▼</div> <div>Purchase Office 365 ProPlus licenses.</div> <div>Purchase Office 365 Personal licenses.</div> <div>Purchase Office 365 Home licenses.</div>
Step 2	<div>▼</div> <div>Engage with the Microsoft FastTrack team.</div> <div>Use Data Migration in the Office 365 Admin center.</div> <div>Use the Hybrid Picker in the SharePoint Admin center.</div> <div>Use the SharePoint Online Deployment Advisor.</div>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:
 You can use Office 365 ProPlus with supported versions of Exchange Server or SharePoint Server that are installed on-premises in your organization. Or, if they're part of your Office 365 plan, you can use Office 365 ProPlus with Exchange Online and SharePoint Online.
 Users can store the files they create with Office 365 ProPlus on their local computers or elsewhere on your network, such as a SharePoint site. Office 365 also provides cloud-based file storage options.
 FastTrack Specialists provide guidance on steps for data migration to Office 365. We provide guidance for you by using a combination of tools and documentation and by performing configuration tasks where applicable and feasible. This is available for all eligible customers with Office 365 services for Exchange Online, OneDrive for Business, and SharePoint Online.
 References:
<https://support.office.com/en-us/article/About-Office-365-ProPlus-in-the-enterprise-9f11214c-911d-4e3c-9993-a> <https://technet.microsoft.com/en-us/library/mt651702.aspx>

NEW QUESTION 239

- (Exam Topic 11)
 Your company uses Office 365.
 You need to prevent users from initiating remote wipes of mobile devices by using the Office 365 portal. What should you modify?

- A. the Outlook Web App mailbox policy
- B. the Exchange ActiveSync device policy
- C. the default role assignment policy
- D. the Exchange ActiveSync Access settings

Answer: B

Explanation:

References: <https://technet.microsoft.com/en-us/library/dn792010.aspx>

NEW QUESTION 243

- (Exam Topic 11)

You are planning an Office 365 pilot.

You need to ensure that the environment is ready for Office 365. Which tool should you use?

- A. Microsoft Connectivity Analyzer
- B. Office 365 Best Practices Analyzer
- C. Remote Connectivity Analyzer
- D. Office 365 Health, Readiness, and Connectivity Checks

Answer: D

Explanation:

Running Office 365 Health, Readiness, and Connectivity Checks prior to setting up Office 365 allows you to make sure that your environment is prepared for the Office 365 services. It can find settings in your existing environment that might cause problems when you start to set up or use your services. This will allow you to fix or work around the potential problems to make your deployment path easier to complete.

References:

<https://support.office.com/en-us/article/Office-365-readiness-checks-c01571b8-183e-4a61-9ca0-80729a48bbda>

NEW QUESTION 246

- (Exam Topic 11)

Your company deploys an Office 365 tenant.

You need to ensure that you can view service health and maintenance reports for the past seven days. What are two possible ways to achieve this goal? Each correct answer presents a complete solution.

- A. View the service health current status page of the Office 365 admin center.
- B. Subscribe to the Office 365 Service Health RSS Notifications feed.
- C. View the service settings page of the Office 365 admin center.
- D. Run the Microsoft OnRamp Readiness Tool.

Answer: AB

Explanation:

As an Office 365 admin, you can see whether there has been a service interruption or outage in your service on the Office 365 service health page. The Service health page shows status information for today, the past six days, and 30 days of history.

NEW QUESTION 251

- (Exam Topic 11)

You work for a company named Contoso Ltd. The company deploys Office 365. Only cloud-based identities are used to access Office 365 resources.

Users must be able to log in Office 365 after create new accounts. You need to reset passwords for all company employees.

What should you do? To answer, select the appropriate Windows PowerShell segment in the dialog box in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

```
Import-Module MSOnline
$Cred = Get-Credential
$Pass = "!Summer2020"
```

▼

Connect-MsolService

Connect-PSSession

Select-AzureSubscription

-Credential \$Cred

▼

Get-MsolUser

Get-ADUser

▼

Set-MsolUserPassword

Set-MsolUser

Set-ADAccountPassword

Set-ADUser

-NewPassword \$Pass

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The Connect-MsolService cmdlet attempts to initiate a connection to Azure Active Directory. Running the Get-MsolUser cmdlet without parameters retrieves all users in the company.

The Set-MsolUserPassword cmdlet resets the password for a user. References:

<https://www.lewan.com/blog/2012/01/10/microsoft-office-365-how-to-reset-all-user-passwords> <https://docs.microsoft.com/en-us/powershell/module/msonline/connect-msolservice?view=azureadps-1.0>

<https://docs.microsoft.com/en-us/powershell/module/msonline/get-msoluser?view=azureadps-1.0> <https://docs.microsoft.com/en-us/powershell/module/msonline/set-msoluserpassword?view=azureadps-1.0>

NEW QUESTION 252

- (Exam Topic 11)

Your company has a hybrid deployment of Office 365.

You need to set the authentication method of the federation servers to forms-based authentication. What should you do?

- A. Modify the Web.config file in the %systemroot%\inetpub\adsfs directory.
- B. Modify the Global.asax file in the %systemroot%\inetpub\adsfs directory.
- C. From the AD FS 2.0 Management console, add a relaying party trust.
- D. From the AD FS 2.0 Management console, add a claims provider trust.

Answer: A

Explanation:

References:

<http://msdn.microsoft.com/en-us/library/xd4thhy.aspx>

NEW QUESTION 255

- (Exam Topic 11)

A company has an Office 365 tenant that has an Enterprise E1 subscription. Users currently sign in with credentials that include the contoso.com domain suffix.

The company is acquired by Fa rikam. Users must now sign in with credentials that include the fabrikam.com domain suffix. You need to ensure that all users sign in with the new domain name. Which Windows PowerShell cmdlet should you run?

- A. Set-MsolUser
- B. Set-MsolUserLicense
- C. Set-MsolUserPrincipalName
- D. Convert-MsolFederatedUser

Answer: C

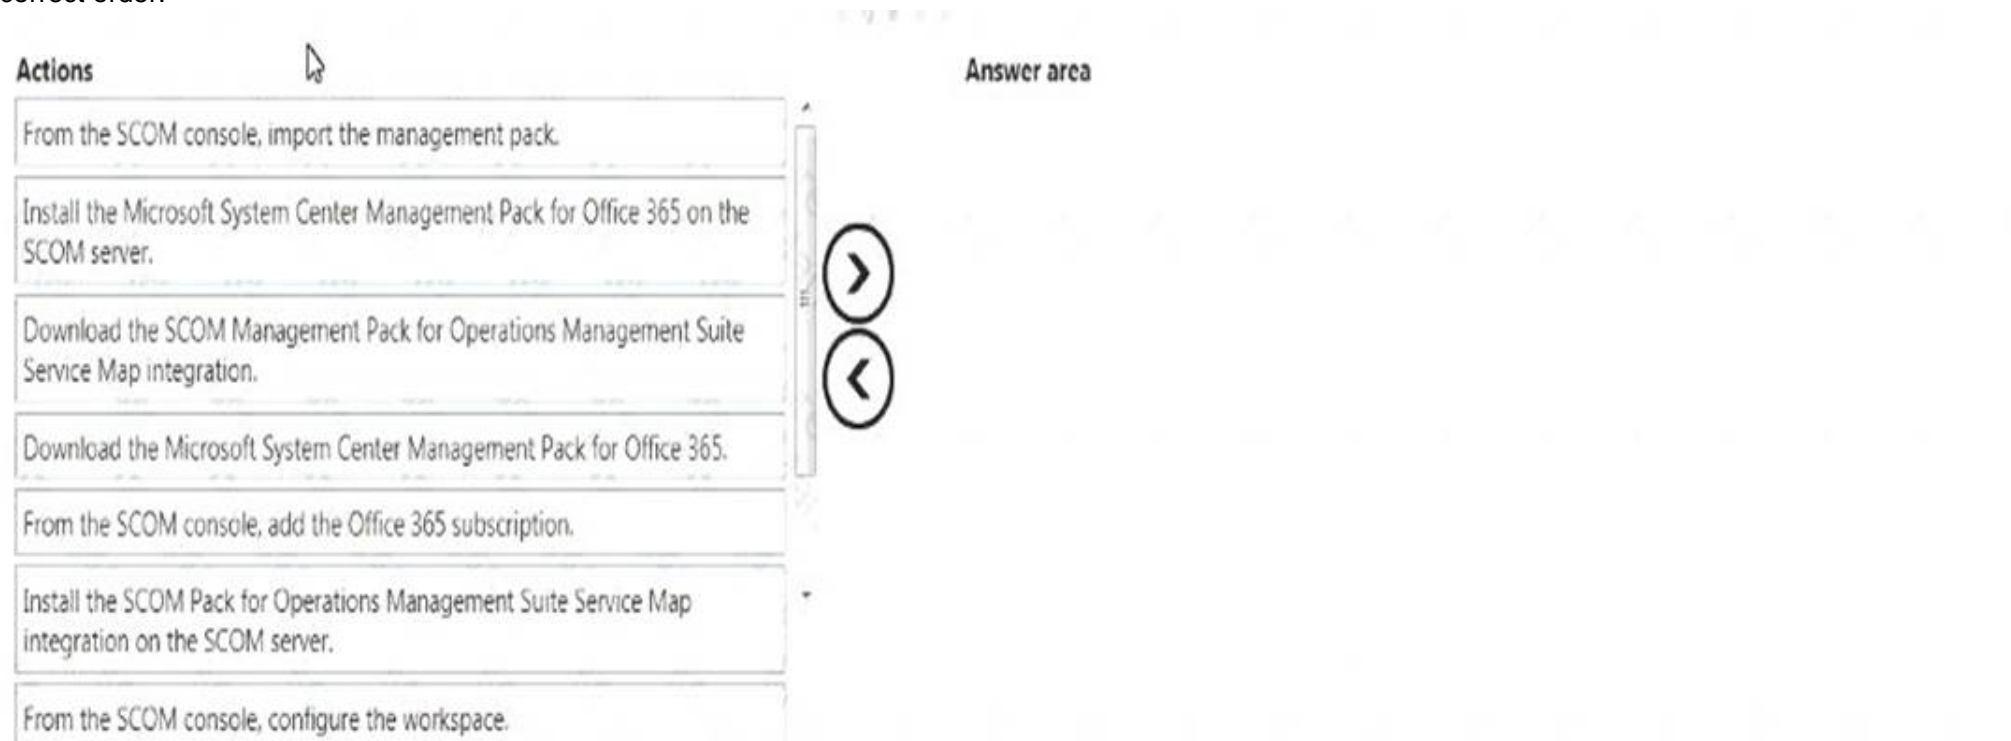

NEW QUESTION 257

- (Exam Topic 11)

You are the Office 365 administrator.

You need to enable monitoring of Office 365 by using System Center Operations Manager (SCOM).

Which five actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- From the SCOM console, import the management pack.
- Install the Microsoft System Center Management Pack for Office 365 on the SCOM server.
- Download the SCOM Management Pack for Operations Management Suite Service Map integration.
- Download the Microsoft System Center Management Pack for Office 365.
- From the SCOM console, add the Office 365 subscription.
- Install the SCOM Pack for Operations Management Suite Service Map integration on the SCOM server.
- From the SCOM console, configure the workspace.

Answer area

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Actions

From the SCOM console, import the management pack.
Install the Microsoft System Center Management Pack for Office 365 on the SCOM server.
Download the SCOM Management Pack for Operations Management Suite Service Map integration.
Download the Microsoft System Center Management Pack for Office 365.
From the SCOM console, add the Office 365 subscription.
Install the SCOM Pack for Operations Management Suite Service Map integration on the SCOM server.
From the SCOM console, configure the workspace.

Answer area

Download the Microsoft System Center Management Pack for Office 365.
Install the Microsoft System Center Management Pack for Office 365 on the SCOM server.
From the SCOM console, add the Office 365 subscription.
From the SCOM console, configure the workspace.
From the SCOM console, import the management pack.

NEW QUESTION 261

- (Exam Topic 11)

You are configuring a new Office 365 tenant for a company. The company plans to use Microsoft SharePoint Online for document sharing and sending emails to users, and Exchange Online for email and calendaring. All employees use Office 365 ProPlus.

Users report issues sending and receiving emails. Some business partners report that emails from the company are rejected because the receiving server cannot validate that emails come from an authorized messaging server.

You need to configure DNS entries for Office 365.

Which DNS record should you use for each service? To answer, drag the appropriate DNS records to the correct services. Each DNS record may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

DNS records

- MX, Autodiscover, and SPF TXT only
- SPF TXT only
- MX and SPF TXT only
- MX, SPF, and SRV only
- MX and SRV only
- SPF and SRV only
- MX only

Answer area

Service

DNS record or records

Exchange

SharePoint

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

<http://howtonetworking.com/msapps/office365-11.htm>

<https://www.lynda.com/Office-365-tutorials/SharePoint-Online-DNS-records/517321/570469-4.html> [https://technet.microsoft.com/en-us/library/dn789058\(v=exchg.150\).aspx](https://technet.microsoft.com/en-us/library/dn789058(v=exchg.150).aspx)

NEW QUESTION 262

- (Exam Topic 11)

You are the Office 365 administrator for a company. All employees have Active Directory Domain Services (AD DS) user accounts. All users accounts are part of an organizational unit (OU) and are members of a security group.

You deploy Azure Active Directory (Azure AD) Connect by using the Express Settings.

You plan to provision user accounts to Office 365. Only employee user accounts should be synchronized to Office 365.

You need to enable filtering for Azure AD Connect.

Which two types of filtering can you use? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

- A. Domain-based
- B. OU-based
- C. Group-based
- D. Attribute-based

Answer: BD

Explanation:

All four types of filtering can be used. However, domain-based and group-based filtering can only be configured on installation.

References:

<https://docs.microsoft.com/en-us/azure/active-directory/connect/active-directory-aadconnectsync-configure-filte>

NEW QUESTION 266

- (Exam Topic 11)

Your company purchases an Office 365 plan. The company has an Active Directory Domain Services domain. User1 must be able to manage Office 365 delegation for the company.

You need to ensure that User1 can assign administrative roles to other users. What should you do?

- A. Create an Office 365 tenant and assign User1 the password administrator role.
- B. Use an existing user management administrator account to assign a role with the correct permissions to User1.
- C. Create an Office 365 tenant and assign User1 the service administrator role.
- D. Create an Office 365 tenant by using the User1 account.

Answer: D

Explanation:

<https://support.office.com/en-ie/article/assign-admin-roles-in-office-365-for-business-eac4d046-1afd-4f1a-85fc->

NEW QUESTION 270

- (Exam Topic 11)

You are the administrator for Contoso Ltd. The company uses Office 365 and has an on-premises Active Directory Domain Services (AD DS) domain that uses the namespace contoso.com.

You plan to implement Workplace Join. You must implement Active Directory Federation Services (AD FS) and Web Application Proxy (WAP). You take the following actions:

-  Install the WAP role on a server.
-  Allocate fs.conroso.com for the AD FS namespace.
-  Define the server FQDN as server1.contoso.com.

You need to install and configure certificate for the WAP server.

- A. a certificate with a subject of fs.contoso.com
- B. a certificate with a subject of server1.contoso.com
- C. a certificate with a subject alternative name that contains fs.contoso.com and enterpriseregistration.contoso.com
- D. a certificate with a subject alternative name that contains server1.contoso.com and fs.contoso.com

Answer: C

NEW QUESTION 275

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

Your network contains a single Active Directory forest. The forest contains a domain controller and Active Directory Federation Services (AD FS) servers that are deployed to virtual machines. The virtual machines run either on-premises or on Microsoft Azure.

You have Azure AD Connect deployed on-premises. The Azure AD Connect database is installed on an on-premises instance of Microsoft SQL Server 2014.

Last month, an Azure AD Connect server experienced a hardware failure that caused an Azure AD Connect server to go offline for several days.

You need to recommend a solution to reduce the outage window when hardware failure occurs on the Azure AD Connect server.

Solution: You deploy a new on-premises Azure AD Connect server that uses a new SQL Server instance. You set the Azure AD Connect server to staging mode. Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

Azure AD Connect sync Staging mode can be used for several scenarios, including:

-  High availability.
-  Test and deploy new configuration changes.
-  Introduce a new server and decommission the old. Have a spare standby server - staging mode

If you have a more complex environment, then having one or more standby servers is recommended. During installation, you can enable a server to be in staging mode.

SQL Clustering would be needed for high availability. Note: SQL High Availability

If you are not using the SQL Server Express that comes with Azure AD Connect, then high availability for SQL Server should also be considered. The only high availability solution supported is SQL clustering. Unsupported solutions include mirroring and Always On.

References:

<https://azure.microsoft.com/en-us/documentation/articles/active-directory-aadconnectsync-operations/>

NEW QUESTION 277

- (Exam Topic 11)

You are the administrator for a company named Tailspin Toys. The company uses the tailspintoys.com SMTP domain. All mailboxes are hosted on Office 365. From the Internet, customers send warranty questions to Tailspin Toys by sending an email message to a shared mailbox named Warranty. The Warranty mailbox has the warranty@tailspintoys.com SMTP address. The service manager reports that many email orders sent to warranty@tailspintoys.com are identified as spam. You need to ensure that all of the messages sent by the customers arrive in the Warranty mailbox. What should you do?

- A. From the Forefront Online Protection Administration Center, enable Directory-Based Edge Blocking.
- B. From the Forefront Online Protection Administration Center, create a new policy rule.
- C. From Windows PowerShell, run the New Transport Rule cmdlet and specify the - ExceptIfHeaderContainsWords parameter.
- D. From Windows PowerShell, run the Set-ContentFilterConfig cmdlet and specify the-BypassedRecipients parameter.

Answer: C

Explanation:

Set-ContentFilterConfig is only available for on-premises Exchange servers.

"...Learn more about this at [Configure your spam filter policies](#). Another option would be create an Exchange transport rule that works like the domain or user-based allow list in the spam filter. You can block messages sent from a particular domain or user in a similar manner too..."

References:

NEW QUESTION 282

- (Exam Topic 11)

A company has an Office 365 tenant.

You need to monitor active Directory synchronization. Which tool should you run?

- A. IdFix
- B. Office 365 Health, Readiness, and Connectivity Check
- C. Microsoft Remote Connectivity Analyzer Tool
- D. Synchronization Service (MIISClient)

Answer: D

Explanation:

One of the first steps you should take before installing DirSync is to look at the directory that you have on-premises and make sure it's healthy and ready to synchronize to Azure Active Directory.

You need to check Active Directory remediation.

DirSync has certain requirements on attributes in the directory, and aligning the attribute values with the DirSync requirements is commonly known as Active Directory remediation. To help with Active Directory remediation, you should use the IdFix tool, which reviews the directory and performs interactive Active Directory remediation. This tool checks for and helps you correct any invalid data and duplicate data in directory attributes, including user PrincipalName (UPN), mailNickName, proxyAddress, sAMAccountName, targetAddress, and others. The IDFix tool also provides assistance for migrating from a non-routable UPN (such as "domain.local," for example) to an Internet routable domain name, because using an Internet-routable domain is one of the requirements for Azure Active Directory. Be sure to run the IdFix tool from within your network, so that it has access to the domain controllers.

References: <https://blogs.office.com/2014/04/15/synchronizing-your-directory-with-office-365-is-easy/>

NEW QUESTION 287

- (Exam Topic 11)

You are the Office 365 administrator for your company.

The company has established the following new requirements:

Members of the legal team must be able to conduct eDiscovery searches.

Employees must be notified when they send email messages that contain confidential information. You need to configure the environment.

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Configure journaling to a Microsoft Exchange Online mailbox for all mailboxes.
- B. Add the members of the legal team to the Discovery Management role group.
- C. Create a Data Loss Prevention policy.
- D. Place all executive mailboxes on In-Place Hold for 365 days and use In-Place eDiscovery for mailboxsearches.
- E. Enable Microsoft Exchange Online Archiving for the executive mailboxes.
- F. Place all executive mailboxes on Retention Hold.

Answer: BC

Explanation:

First requirement is "Members of the legal team must be able to conduct eDiscovery searches."

Second requirement employees must be notified when they send email messages that contain confidential information"

B: The Discovery Management role group allows administrators or USERS to perform searches of mailboxes in the Exchange Online organization.

C: Data Loss Prevention Policies can be configured with a Policy Tip to notify the sender when they are sending confidential information.

Existing or custom DLP policy templates can be used to detect the presence of confidential information.

NEW QUESTION 289

- (Exam Topic 11)

You plan to deploy a new Office 365 tenant for a company. You plan to use the domain name contoso.microsoftonline.com for the new tenant. Your on-premises Active Directory Domain Services (AD DS) domain uses contoso.com for its namespace and this DNS namespace is managed on-premises.

You have the following requirements:

-  Users must use Office 365 for email.

Users must use contoso.com as the suffix for all email addresses.

- ▶ You must migrate the DNS namespace to Office 365 and that environment must manage all DNS records.
- ▶ No interruption of DNS resolution is permitted. You need to configure the Office 365 tenant.

Which three steps should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Answer Area

Verify the contoso.com domain

Add a TXT record for contoso.com

Add a TXT record for contoso.microsoftonline.com

Create NS records for microsoftonline.com that use the following values: ns1.bdm.microsoftonline.com and ns2.bdm.microsoftonline.com

Create NS records for contoso.com that use the following values: ns1.bdm.microsoftonline.com and ns2.bdm.microsoftonline.com

Verify the contoso.com microsoftonline.com domain

Add an SRV record for contoso.com

Add an SRV record for contoso.microsoftonline.com

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: Add a TXT record for contoso.com

Box 2: Verify the contoso.com domain

Box 3: Create NS records for contoso.com that use the following values: ns1.bdm.microsoftonline.com and ns2.bdm.microsoftonline.com

References:

<https://support.office.com/en-us/article/change-nameservers-to-set-up-office-365-with-any-domain-registrar-a8b>

NEW QUESTION 292

- (Exam Topic 11)

Your company has a Microsoft Exchange Server 2003 organization.

Users access their mailbox by using RPC over HTTP and Exchange ActiveSync.

You purchase an Office 365 subscription. From the Office 365 portal, you create and verify the accepted domain of the company. From the Exchange Control Panel, you attempt to migrate all of the mailboxes to Microsoft Exchange Online and you receive an error message indicating that the remote server is unavailable. You need to identify what prevents the mailboxes from migrating.

Which tool should you use?

- A. the Microsoft Remote Connectivity Analyzer
- B. the Exchange Server Deployment Assistant
- C. the Office 365 Deployment Readiness Tool
- D. the Microsoft Online Services Directory Synchronization Configuration Wizard

Answer: A

Explanation:

References:

<http://o365info.com/microsoft-remote-connectivity-analyzer-exrca-autodiscover-troubleshootingtools-part-2-of->

NEW QUESTION 297

- (Exam Topic 11)

You deploy Office 365.

You need to activate Rights Management. Which method should you use?

- A. the set-xdsconf igration Windows PowerShell cmdlet

- B. the Active Directory Administrative Center console
- C. the Office 365 admin center
- D. the Enable-AadrmDevicePlatform Windows PowerShell Cmdlet

Answer: C

Explanation:

Once you have signed up for an Office 365 plan that includes Rights Management, sign in to Office 365 with a work or school account that has the global administrator role for your Office 365 deployment. You should then navigate to the rights management page via Settings > Services & add-ins > Microsoft Azure Information Protection > Manage Microsoft Azure Information Protection settings. On the rights management page, click activate.

References: <https://docs.microsoft.com/en-us/information-protection/deploy-use/activate-office365>

NEW QUESTION 300

- (Exam Topic 11)

You are the Office 365 administrator for your company. The company allows external communications through Microsoft Skype for Business Online for all domains.

The call center manager reports that call center personnel are spending too much time chatting with friends and not enough time taking calls. She requests that the call center personnel be blocked from chatting with anyone external to the company by using Skype for Business Online.

They still must be able to communicate with internal users.

You need to prevent all call center personnel from communicating with external contacts by using Skype for Business Online, while still allowing other employees to communicate with external contacts.

What should you do?

- A. In the Skype for Business admin center, select all users, edit their external communications settings, and clear the Skype for Business Users check box.
- B. On the External Communications page of the Skype for Business admin center, turn off external access.
- C. In the Skype for Business admin center, remove the Skype for Business Online license from each of the call center personnel.
- D. In the Skype for Business admin center, select all call center personnel, edit their external communications settings, and clear the People on Public IM Networks check box.

Answer: D

Explanation:

References: <https://theucguy.net/configuring-external-communications-in-Lync-online-wave-1>

NEW QUESTION 305

- (Exam Topic 11)

A company has an Office 365 tenant. You plan to distribute the Office 365 ProPlus client to users. The client machines do not normally have Internet access.

You need to activate the Office 365 ProPlus installations and ensure that the licenses remain active. What should you do?

- A. Connect the client computer to the Internet once to activate the Office 365 ProPlus client, and once every 90days after that.
- B. Connect the client computer to the Internet once to activate the Office 365 ProPlus client, and once every 30 days after that.
- C. Connect the client computer to the Internet only once to activate the Office 365 ProPlus client.
- D. Connect the client computer to the Internet once to activate the Office 365 ProPlus client, and once every 180 days after that.
- E. Connect the client computer to the Internet once to activate the Office 365 ProPlus client, and once every 365 days after that.

Answer: B

Explanation:

After you've verified the user is assigned a license, you should check that Office 365 ProPlus is activated. Activation usually occurs during initial installation. The computer has to connect to the Internet at least once every 30 days for Office 365 ProPlus to remain activated.

<https://technet.microsoft.com/en-us/library/gg702620.aspx>

NEW QUESTION 308

- (Exam Topic 11)

An organization has an Office 365 tenant. You use multi-factor authentication for all privileged accounts. User1 is on an extended leave of absence.

You must configure the mailbox for User1 to forward to User2. You need to configure forwarding for User1's mailbox.

What should you do first?

- A. Launch Windows PowerShell as an administrator.
- B. Launch the Exchange Admin Center.
- C. Create an app password for the administrator account.
- D. Connect to Exchange Online by using Remote PowerShell.

Answer: C

NEW QUESTION 310

- (Exam Topic 11)

A company has 50 employees that use Office 365.

You need to disable password expiration for all accounts.

How should you complete the relevant Windows PowerShell commands? To answer, drag the appropriate Windows PowerShell segment to the correct location in the answer area. Each Windows PowerShell segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NEW QUESTION 315

- (Exam Topic 11)

You are the Office 365 administrator for your company. All users have been assigned E3 licenses and use Office Web Apps to create and edit documents. A user attempts to access documents stored on a USB flash drive. When the user double-clicks a file that is stored on the USB flash drive, an error message states that Windows can't open the file and needs to know what program to use to open it. You need to ensure that the user can start Office applications and edit Office documents by double-clicking files. What should you do on the user's computer?

- A. Use Office on Demand.
- B. Install Office 365 ProPlus from the Office 365 portal.
- C. Copy the files from the USB flash drive to the local hard drive.
- D. Install and configure Microsoft Word Viewer

Answer: B

Explanation:

The message "can't open the file and needs to know what program to use to open it" Points to Office not being installed/Windows not recognizing Office is installed on the PC, so would need to download Office 365 ProPlus from the Portal.

NEW QUESTION 317

- (Exam Topic 11)

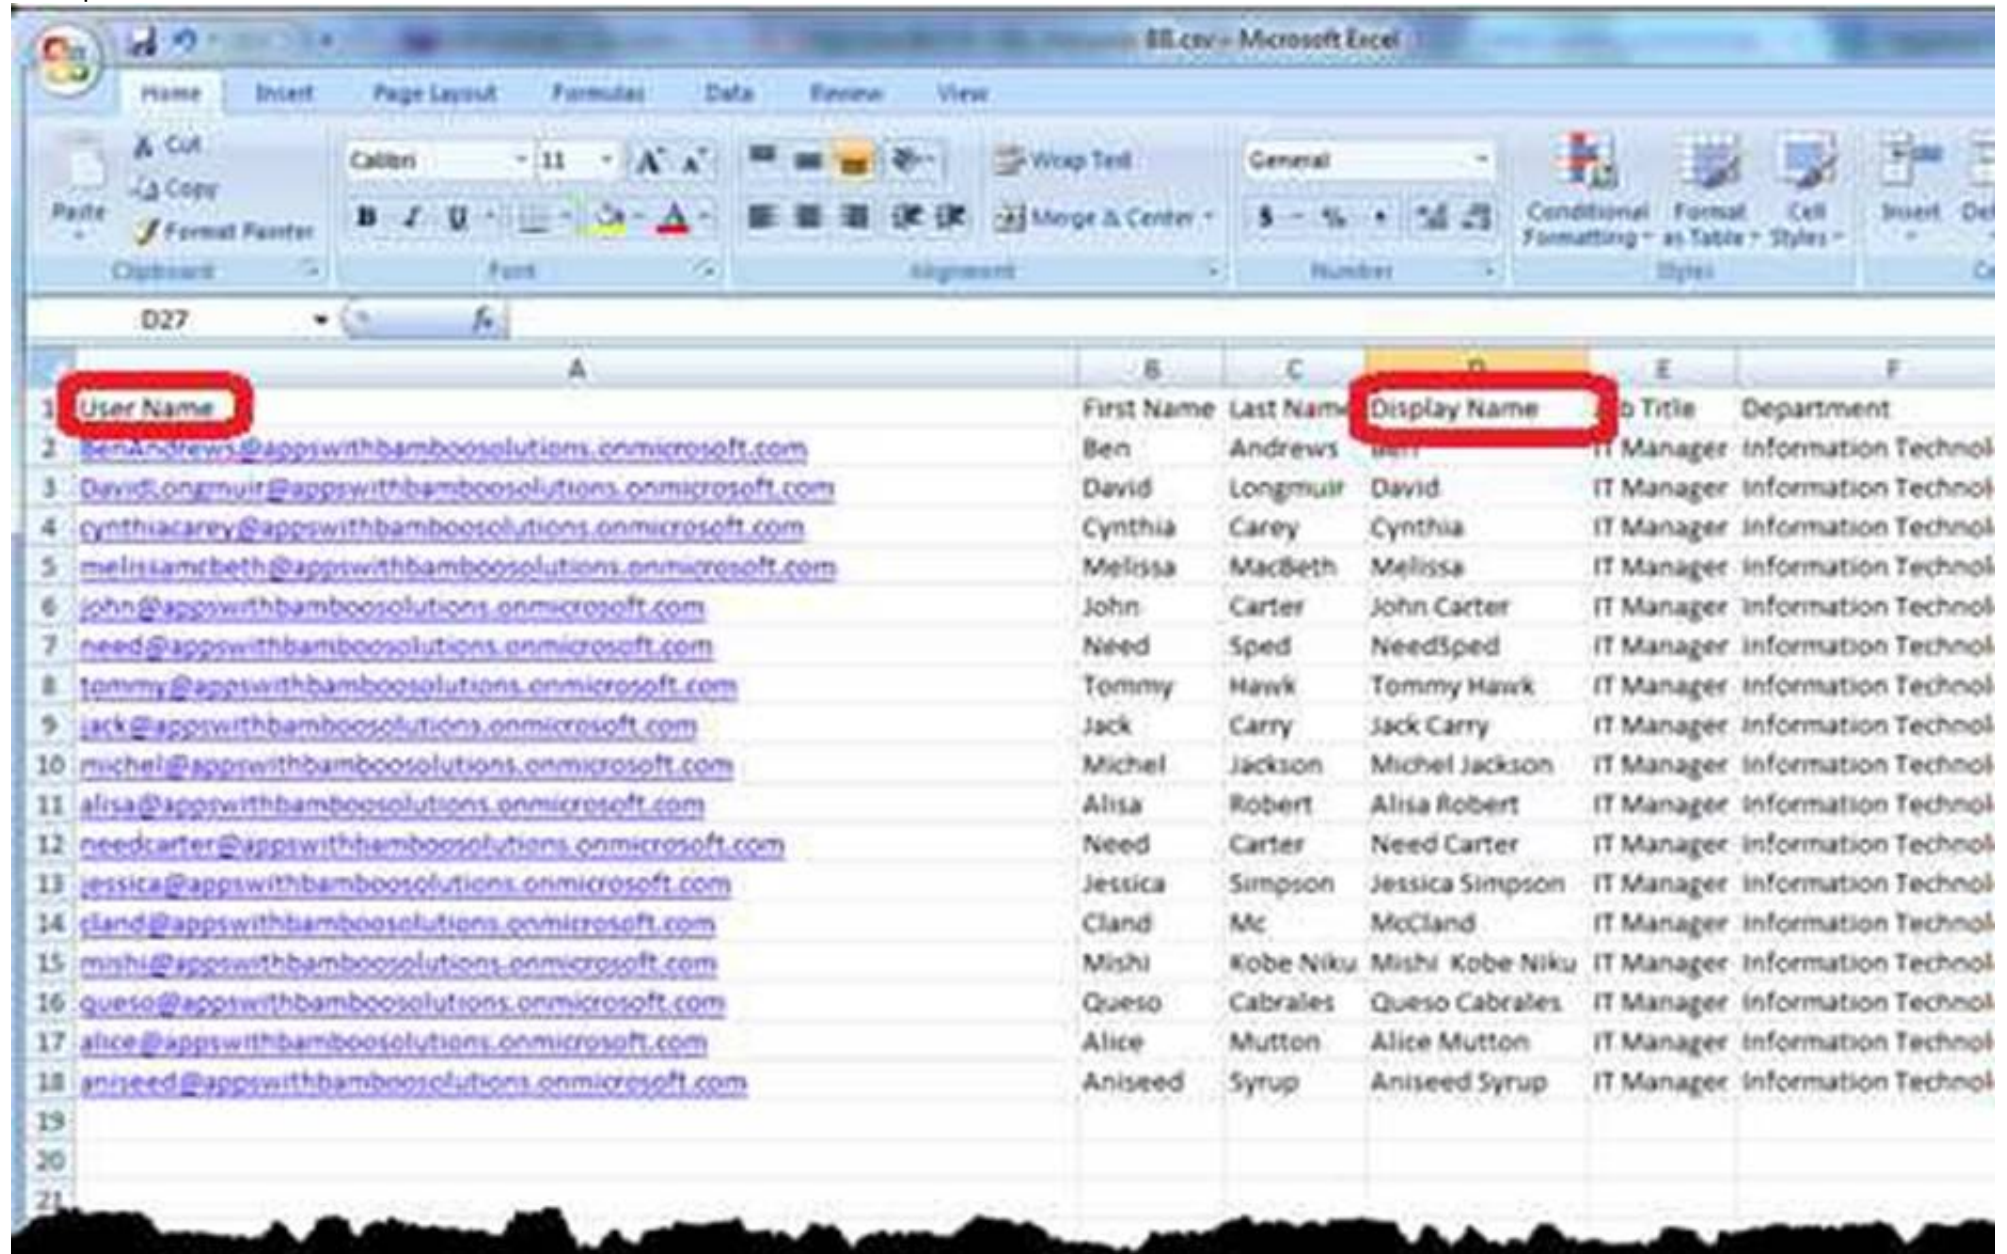

You plan to import several user accounts to an Office 365 subscription by using a CSV file. You download a sample CSV file from the Office 365 admin center. You need to prepare the file for the planned import. What should you do?

- A. Add a column named Managed By.
- B. Add values to the UserName and Country columns.
- C. Add values to the UserName and DisplayName columns.
- D. Add a column named Password.

Answer: C

Explanation:

NEW QUESTION 320

- (Exam Topic 11)

A company has an Office 365 tenant and uses Exchange Online and Skype for Business Online.

User1 is scheduling a Skype meeting with User2. User 1 is not able to see availability information for User2. You need to troubleshoot the issue. What should you use?

- A. Microsoft Connectivity Analyzer Tool
- B. Microsoft Skype for Business Connectivity Analyzer Tool
- C. Message Header Analyzer
- D. IdFix

Answer: A

Explanation:

The Microsoft Connectivity Analyzer Tool verifies that an Office 365 mailbox can access the free/busy information of an on-premises mailbox, and vice versa

NEW QUESTION 324

- (Exam Topic 11)

A company has an Office 365 tenant that has an Enterprise E1 subscription. Users currently sign in with credentials that include the contoso.com domain suffix.

The company is acquired by Fabrikam. Users must now sign in with credentials that include the fabrikam.com domain suffix.

You need to ensure that all users sign in with the new domain name. Which Windows PowerShell cmdlet should you run?

- A. Set-MsolUser
- B. Redo-MsolProvisionUser
- C. Set-MsolUserLicense
- D. Set-MsolUserPrincipalName
- E. Convert-MsolFederatedUser
- F. Set-MailUser
- G. Set-LinkedUser
- H. New-MsolUser

Answer: D

Explanation:

The Set-MsolUserPrincipalName cmdlet is used to change the User Principal Name (user ID) of a user. This cmdlet can be used to move a user between a federated and standard domain, which will result in their authentication type changing to that of the target domain.

The following command renames user1@contoso.com to CCole@contoso.com.

```
Set-MsolUserPrincipalName -UserPrincipalName User1@contoso.com -NewUserPrincipalName CCole@contoso.com
```

NEW QUESTION 327

- (Exam Topic 11)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to ensure that a user named User1 can create mailboxes in Exchange Online and sites in SharePoint Online.

Solution: You add User1 to the Global administrator admin role. Does this meet the goal?

A. Yes

B. No

Answer: A

Explanation:

The Global administrator admin role has access to all administrative features in the Office 365 suite of services in your plan.

NEW QUESTION 329

- (Exam Topic 11)

A company has an Office 365 tenant. The company uses a third-party DNS provider that does not allow TXT records.

You need to verify domain ownership. What should you do?

A. Create an MX record.

B. Create a CNAME record.

C. Create an A record.

D. Create an SRV record.

Answer: A

Explanation:

Add a TXT or MX record for DNS verification. References:

NEW QUESTION 333

- (Exam Topic 11)

You are the administrator for Contoso Ltd. All employee mailboxes are hosted in Microsoft Exchange Online. All employees use the contoso.com company domain as their primary SMTP address.

Users from partner companies report that the email messages they receive from Contoso are marked as spam. You need to configure DNS to help prevent spam.

What should you do? To answer, select the appropriate options in the dialog box in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

On your company's DNS servers do the following:

Create

a TXT record
an MX record
an A record
an NS record

with the value of

v=spf1 include:spf.protection.outlook.com -all
protection.outlook.com
v=spf1 include:spf.contoso.com -all
protection.contoso.com

A. Mastered

B. Not Mastered

Answer: A

Explanation:

NEW QUESTION 334

- (Exam Topic 11)

You are an administrator for a company. You are planning an Office 365 pilot. The current environment has servers that run Windows Server 2012. There is no

budget to upgrade the servers.

You add an external DNS record for Active Directory Federation Services (AD FS). You must implement a single sign-on (SSO) solution for users to access the Office 365 resources. You must deploy the AD FS components with the following requirements:

- ▶ Loss of a single server must not prevent any authentication request or management function.
- ▶ Users must be able to access the Office 365 environment from their home computers by using their corporate credentials.
- ▶ Any modifications to service configurations must be made after servers are deployed. You need to deploy AD FS.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Deploy an AD FS proxy server in the perimeter network.

Create an AD FS federation server farm.

Add an external DNS record that points to the AD FS federation server.

Deploy multiple AD FS proxies in the perimeter network.

Deploy an AD FS proxy in the internal network.

Deploy a Microsoft SQL Server cluster to host the AD FS configuration database.

Deploy a Microsoft SQL Server instance to host the AD FS configuration database.

Create an AD FS federation server.
