- C. Data Awareness is not enabled.
- D. Identity Awareness is not enabled.

NEW QUESTION 6

- (Exam Topic 1)

Which of the following is NOT a SecureXL traffic flow?

- A. Medium Path
- B. Accelerated Path
- C. Fast Path
- D. Slow Path

Answer: C

Explanation:

SecureXL is an acceleration solution that maximizes performance of the Firewall and does not compromise security. When SecureXL is enabled on a Security Gateway, some CPU intensive operations are processed by virtualized software instead of the Firewall kernel. The Firewall can inspect and process connections more efficiently and accelerate throughput and connection rates. These are the SecureXL traffic flows:

Slow path - Packets and connections that are inspected by the Firewall and are not processed by SecureXL. Accelerated path - Packets and connections that are offloaded to SecureXL and are not processed by the Firewall.

Medium path - Packets that require deeper inspection cannot use the accelerated path. It is not necessary for the Firewall to inspect these packets, they can be offloaded and do not use the slow path. For example, packets that are inspected by IPS cannot use the accelerated path and can be offloaded to the IPS PSL (Passive Streaming Library). SecureXL processes these packets more quickly than packets on the slow path.

- B. BGP, OSPF, EIGRP, PIM, IGMP
- C. BGP, OSPF, RIP, PIM, IGMP
- D. BGP, OSPF, RIP, EIGRP

Answer: A

Explanation:

The Advanced Routing Suite

The Advanced Routing Suite CLI is available as part of the Advanced Networking Software Blade.

For organizations looking to implement scalable, fault-tolerant, secure networks, the Advanced Networking blade enables them to run industry-standard dynamic routing protocols including BGP, OSPF, RIPv1, and RIPv2 on security gateways. OSPF, RIPv1, and RIPv2 enable dynamic routing over a single autonomous system—like a single department, company, or service provider—to avoid network failures. BGP provides dynamic routing support across more complex networks involving multiple autonomous systems—such as when a company uses two service providers or divides a network into multiple areas with different administrators responsible for the performance of each.

Central License

A Central License is a license attached to the Security Management server IP address, rather than the gatewa IP address. The benefits of a Central License are:
Only one IP address is needed for all licenses.

A license can be taken from one gateway and given to another.

NEW QUESTION 62

- (Exam Topic 1)

Which options are given on features, when editing a Role on Gaia Platform?

- A. Read/Write, Read Only
- B. Read/Write, Read only, None
- C. Read/Write, None
- D. Read Only, None

Answer: B

Explanation:

Roles

Role-based administration (RBA) lets you create administrative roles for users. With RBA, an administrator can allow Gaia users to access specified features by including those features in a role and assigning that role to users. Each role can include a combination of administrative (read/write) access to some features, monitoring (readonly) access to other features, and no access to other features.

You can also specify which access mechanisms (WebUI or the CLI) are available to the user.

Note - When users log in to the WebUI, they see only those features that they have read-only or read/write access to. If they have read-only access to a feature, they can see the settings pages, but cannot change the settings.

Gaia includes these predefined roles:

You cannot delete or change the predefined roles.

Note - Do not define a new user for external users. An external user is one that is defined on an authentication server (such as RADIUS or TACACS) and not on the local Gaia system.

data.csv:

```
mgmt_cli add host --batch data.csv -u <username> -p <password> -m <management server>

An internal router is sending UDP keep-alive packets that are being encapsulated with GRE and sent through your R77 Security Gateway to a partner site. A rule for GRE traffic is configured for ACCEPT/LOG. Although the keep-alive packets are being sent every minute, a search through the SmartView Tracker logs for GRE traffic only shows one entry for the whole day (early in the morning after a Policy install).

Your partner site indicates they are successfully receiving the GRE encapsulated keep-alive packets on the 1-minute interval.

If GRE encapsulation is turned off on the router, SmartView Tracker shows a log entry for the UDP keep-alive packet every minute.

Which of the following is the BEST Explanation: for this behavior?

- A. The setting Log does not capture this level of detail for GR
- B. Set the rule tracking action to Audit since certain types of traffic can only be tracked this way.

- D. Because it is encrypted, the R77 Security Gateway cannot distinguish between GRE session
- E. This is a known issue with GR
- F. Use IPSEC instead of the non-standard GRE protocol for encapsulation.
- G. The Log Server log unification process unifies all log entries from the Security Gateway on a specific connection into only one log entry in the SmartView Tracker
- H. GRE traffic has a 10 minute session timeout, thus each keep-alive packet is considered part of the original logged connection at the beginning of the day.
