Windows Autopilot user-driven mode lets you configure new Windows devices to automatically transform them from their factory state to a ready-to-use state. This process doesn't require that IT personnel touch the device.
The process is very simple. Devices can be shipped or distributed to the end user directly with the following instructions:
Unbox the device, plug it in, and turn it on.
Choose a language (only required when multiple languages are installed), locale, and keyboard.
Connect it to a wireless or wired network with internet access. If using wireless, the user must establish the Wi-Fi link.
Specify your e-mail address and password for your organization account. The rest of the process is automated. The device will:
Join the organization.
Enroll in Intune (or another MDM service) Get configured as defined by the organization. Reference:
